

From BIM & Scheduling to Real Project Control

Connect your BIM model directly to your project schedule.
In a free live demo, we'll show you how it works using your own project data.

The problem

Multiple systems. Zero connection.

- × No automated progress visualization
- × No operational use of the BIM model
- × Complicated as-built documentation
- × project schedule and BIM model remain disconnected

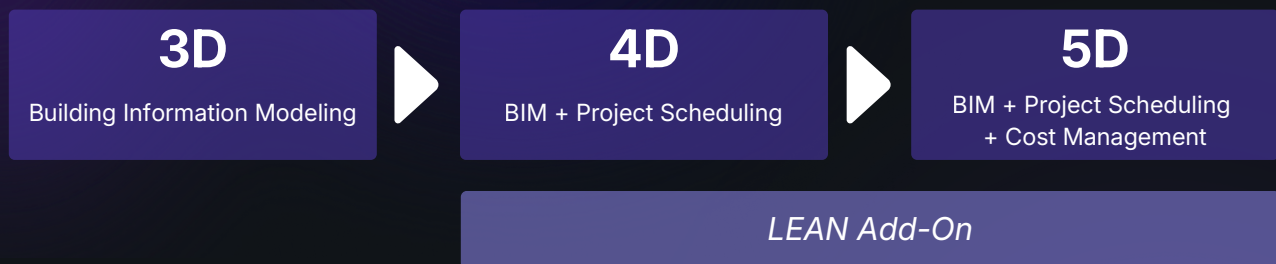

The solution

Icmd connects every layer.

- ✓ Easy simulation of construction sequences
- ✓ Progress directly visible within the model
- ✓ Linking of building elements and activities
- ✓ Basis for as-built documentation

How the Integration Works

Icmd brings together the three key dimensions of modern construction projects **in a single, connected platform**.

The BIM model provides the spatial foundation, the schedule drives execution, and cost management delivers real-time budget visibility. When **all three dimensions** are connected, project teams can **identify risks sooner, make faster decisions, and streamline coordination** across the entire project.

For enhanced execution control, **Lean methods** such as **LPS® and Takt Planning** can be integrated as optional add-ons.

Real-World Example: Daiichi Sankyo

Daiichi Sankyo is investing €1 billion to expand its Pfaffenhofen site into an international innovation hub for the production of advanced cancer therapies.

lcmd was implemented there as the central platform for digital TAKT planning.

- **BIM model** integrated and connected to the **schedule**
- **Live progress** visualization directly in the model
- **Critical paths** identified and managed early

[Watch the Webinar Recording](#)

lcmd and the link to the BIM model provide an **enormous gain in knowledge** after just a short time.

The big advantage lies not only in potential **cost savings**, but also in the ability to make **better and more informed decisions**.

The information base is the same for everyone. And that is our biggest added value: **transparency creates trust and enables genuine collaboration**.

Wolfgang Bayer • Head of Site Construction
Daiichi Sankyo Europe GmbH

◆ LIMITIERT ◆

Exclusive Offer: Free Pilot Synchronization

Connect your BIM models directly to your project schedule to enable seamless, data-driven project controls and eliminate disconnected workflows.
