

— A BRIEFING FOR OWNER-OPERATORS

Agentic ERM

Enterprise Resource Management, reimagined for the age of agents.

Twenty people act as one hundred. The agents do the work. The system improves itself.

● For 15–50 person companies

● Backbone already built, customised for you

● Live data from day one

Inside this briefing.

Eight short sections on what Agentic ERM is, how it arrives, what a working day looks like on top of it, and why the window to adopt it is now.

The thesis

Every growing company reaches the same wall. It is rarely a lack of effort. It is a lack of agreement. Your CRM believes one thing about a customer. Your ERP believes another. A spreadsheet believes a third. Someone on your team spends part of every day deciding which version is real.

Agentic ERM retires that job. It is a single operating core that connects the systems you already use, holds one trusted version of your data, and runs a fleet of small agents that do the work on top of it. Not a dashboard that reports the problem, a layer that resolves it.

The result is leverage. A twenty-person company can operate like a hundred-person company on the same payroll, because the repetitive work, the reconciliation, the chasing, the drafting and the triage, is carried by agents that never sleep and improve every week.

"Stop paying twelve vendors to disagree about what a customer is. Run one entity store, one minimal view, and a fleet of small agents that do the work, and that improve themselves."

the platform improves itself

WHAT YOU WILL TAKE AWAY FROM THIS BRIEFING

01 What Agentic ERM is

Why it is a layer beneath your tools, not another tool on top.

02 How it arrives

With no migration weekend and no big-bang switch to survive.

03 What a day looks like

A working morning when agents run the routine for you.

04 Why the window is now

The lead is decided in months, not years.

From twelve disagreements to one source of truth.

Today your operation is spread across a dozen tools: a CRM, an ERP, a projects app, a wiki, a support desk, an expense tool, a meeting notetaker, an accounting package, an inventory system, a chat app, a sales-engagement tool, and an AI bolt-on or two. Together they cost €40,000 to €60,000 a year. Three of them auto-renewed last month. None of them agree on what a customer is.

The subscription was never the real cost. The real cost is everything around it.

TODAY: TWELVE TOOLS, NO AGREEMENT

CRM	ERP	Projects
Wiki	Support	Expense
Meetings	Accounting	Inventory
Chat	Sales eng.	AI bolt-on

€40–
60k

/ year, and none of them agree.

Time lost to reconciliation

Hours spent re-keying and cross-checking, every day.

Decisions on stale data

Choices made on numbers that quietly went out of date.

Opportunities that slip

The right person never saw the signal in time.

Growth capped by headcount

More work means more seats, not more output.

The question every owner-operator is really asking is simple: "What is happening in my company, right now?" It should take one screen and one answer. Today it takes twelve logins and a judgement call.

The new operating core.

Agentic ERM is not another tool to add to the pile. It is the layer beneath the pile. It connects your existing systems, brings their data into one entity store, presents a single minimal view, and lets a fleet of agents act on top of all of it.

ERM stands for Enterprise Resource Management, and the name is deliberate. This is the discipline of running a company's resources, its data, its systems and its people's attention, as one managed whole. The difference now is that the managing is done by agents.

THE LAYER, TOP TO BOTTOM

AI Agents

The workforce that does the work, around the clock

Unified & Trusted Data

One entity store, kept in sync both ways

Connected Systems

Every app you already use, via API

Workflows & Automation

The foundation everything runs on

Connected

Your stack finally agrees. Every system speaks to one core instead of a dozen point-to-point patches.

Unified

One trusted version of every customer, project, order and ticket. No more choosing which tool to believe.

Intelligent by design

Agents do not just surface information. They act on it, draft the reply, route the approval, reconcile the count.

It is not another tool. It is the layer that makes everything you already run work better, together.

No migration. No big-bang switch.

The fear with any new system is the migration weekend. Agentic ERM does not have one. We connect to your existing stack via API on day one. Data flows into the cockpit, and the cockpit flows back into your tools. The colleague who loves their CRM keeps using it. The engineer who lives in their projects app keeps living there. Everyone sees the same truth. Nothing is forced, nothing is lost.

DAY 0**API connections**

We connect to your existing stack, read-only, inside your perimeter. No data leaves anywhere you do not want it to.

DAY 1**You see your live data**

Your real customers, projects, orders and replies, already in the cockpit. You can click around. No mockup, no fake names.

WEEK 2**Early adopters jump in**

The two or three people who dislike their current tools start living in the cockpit. Everyone else keeps their workflow. All see the same numbers.

WEEK 8**The whole team works in it**

By now it is faster than anything else. Most people stopped opening the old tools without being asked. Sync keeps the holdouts current.

DAY 90+**Old tools retire naturally**

You cancel subscriptions because nobody is using them. Not by mandate. By the fact that the new system is genuinely better.

0**CSV exports needed**

No migration weekend. No data entered twice. No retraining on day one.

100% queryable on day one

Email, calendar and drive stay in Google or Microsoft. Everything else is mirrored and kept in sync.

Your screen on a Tuesday morning.

An illustrative snapshot of an Agentic ERM customer: a 28-person company. Every number, ticket and approval below is something an agent wrote, observed or routed overnight, without a human opening a tool. This is what your own screen looks like on day one, populated with your real data.

Good morning.

Every item here was written by an agent, not a human.

The owner did not open a second tool this morning.

Sales, marketing and content on the same core.

Outbound is not a separate tool. Cadences, email campaigns, social publishing, the newsletter and blog SEO all write to the same entity store as your projects and purchase orders. When a prospect replies, the pipeline updates. When a customer ships, the case-study queue updates. Nothing is copy-pasted, nothing is siloed.

Reply triage, done for you

- **Hot** replies get a draft and a QC-ready attachment prepared automatically.
- **Warm** replies are queued and re-approached at the date they asked for.
- **Pass** replies are suppressed and the list is kept clean, on its own.

Content pipeline, always full

- Posts and carousels drafted from the week's real wins, ready for one approval.
- SEO blog drafts with internal links, waiting for a light human edit.
- Newsletter auto-assembled from the week, sent on your say-so.

Every reply updates the pipeline. Every customer win becomes the next post.

When something is wrong, the system fixes itself.

Anyone in the company can flag a problem. An agent reads it, reproduces the issue, writes the fix, and tests it against past data. A human reviews the change and ships it. The platform compounds, week after week, closer to how your company actually works. Nothing has to be roadmapped, escalated or scoped.

01 | A human notices

Someone posts, in plain language, that an expense agent misclassified the tax on an international receipt. That is the entire required effort.

02 | An agent diagnoses

It pulls the receipt, confirms the misclassification, finds eleven similar cases across the past six months, and isolates the exact cause.

03 | A fix is drafted and tested

The change is written, 47 tests are run, and all eleven historical cases pass, before a human has looked at anything.

04 | A human reviews and ships

The owner reviews the change and approves it. It ships with zero downtime, and the affected claims are recomputed automatically.

~14 | platform changes shipped last quarter, every one from your team's own feedback. Your operating core becomes more yours every week. The agents that improve it never sleep, and the human review never gets bypassed.

What we bring, what we build, what it costs.

This is not a generic AI consultancy, and it is not a SaaS subscription with a sales rep attached. It is the right shape for a 15 to 50 person company that wants to compound.

WHAT WE BRING

A proven backbone

The entity store, the agent fleet, the view layer and the self-improvement loop, already built and already running on real customers. You inherit a system that took two years to make, on day one.

WHAT WE BUILD

The customisation layer

Your entities, your data model, your sector's vocabulary, your integrations, your branded view, and your agents for your specific workflows. This is where the engagement value sits, and where the platform becomes unmistakably yours.

WHAT IT COSTS

Scoped to your company

Pricing is not one-size-fits-all. Headcount, data complexity, integration count and agent scope drive the number, and we scope it with you in detail. What we promise: an order of magnitude cheaper than the SaaS stack it replaces, and you own the result.

2 years

of backbone, already built

Order of magnitude

cheaper than the stack it replaces

You own it

the result is yours to keep

"You inherit the backbone, the know-how, and a team that has implemented it in real companies. Then we shape it around how your company actually works."

Every week you wait, the gap compounds.

3–5×

productivity uplift. A 20-person company operating like 60 to 100, on the same payroll.

~daily

model improvements. Your agents get better with the frontier, automatically, with no rework.

18 mo

the category-defining window. Whoever consolidates first captures the margin and the lead times.

— THE NEXT STEP

Sixty minutes. Your stack, mapped. Your preview, wired to your data.

We walk through your current tools, scope the integration shape, name the three highest-leverage agents for your business, and reserve a preview wired to two of your systems. No demo theatre. Either you see your live data and want more, or you do not. Both answers are useful.
