She won a Gemini Award for her work. She acted in The Hot Chick, her first Hollywood movie, back in 2002. There are three movies she has coming out soon: A Most Wanted Man, Every Thing Will Be Fine, and a romantic comedy in Hawaii that Cameron Crowe is making. You can think of planets as parts of your personality and the signs as different ways you see things. We've got settings for sidereal planetary positions. Since we don't have her birth time, the Moon could be 6 degrees before or after this position. The aspects show the shapes made by the planets' angles. Each shape has a meaning. You can make your own free birth chart with our tool. Our features include hiding/showing planets and asteroids, choosing a house system, customizing orbs, showing declinations, sidereal charts, and more. We use chart patterns to see bigger shapes in the chart. Declinations show how far north or south a planet is from the celestial equator. It's not often used in astrology. Parallels happen when two planets are at the same distance north or south, and they have the same effect as conjunctions. Contraparallels occur when one star is north and another is south, and they have the same effect as oppositions. You can get a custom wall print with our advanced search feature that lets you filter famous people by any planet, aspect, etc.
