Our IT Support teams are dedicated to helping approved customers across the organization. We're here to guide those who need remote access to work tools and address other relevant tech topics. A Virtual Private Network (VPN) enables secure connections to the university network, encrypting shared information and protecting sensitive data like health records, passwords, and more. Choose a VPN software compatible with your computer operating system. To log in, use your Gatorlink username and password. Both UF and UF Health offer VPN clients: Software downloads for PC and MAC users, along with installation help. If you need assistance, don't hesitate to reach out. The Gatorlink VPN service provides secure remote access to the University of Florida network, making it seem like your computer is physically connected to campus. This service is provided by Network Services and the UF Helpdesk. Once installed, you'll automatically receive updates when a new client becomes available.
