We will continue defending the rights of all libraries; we ask you to stand with us.Fewer than 1 in 1,000 patrons donate, contributing an average of just \$15.58. If you find our library useful, please contribute. Genette's work "Narrative Discourse: An Essay in Method" (1979) explores the basic constituents and techniques of narrative through Proust's "Remembrance of Things Past". His systemic theory of narrative deals with fiction structure, including fictional devices that go unnoticed yet fulfill Western narrative tradition. Previews available in English. This week, a court ruling favored major corporations, removing access to over 500,000 books. Researchers have developed various models to analyze and generate narratives. One such model is the event-indexing model, which simulates how humans comprehend stories. This model can calculate processing load by considering desired levels of non-linearity in a narrative. Recent studies have focused on annotating narratives for research purposes. For instance, one study aimed to chart goals of narrative generation research. Another study explored the translator's voice and presence within narratology, linguistics, stylistics, and translation studies. In addition, educational researchers have investigated the effects of small-group discussions on students' interpretive strategies in literature classes. Meanwhile, art historians have applied Genette's narratological framework to analyze William Faulkner's works. Finally, sociologists have examined the narrative functions of characters in Caesar's Bellum Gallicum and their relationship to his political aims. These studies highlight the diverse approaches researchers have taken to understand and create narratives.
