Brooks offers two shoe fits: a classic fit and StealthFit. The classic fit is designed for comfort, consistency, and access, while the StealthFit is for those who value performance, innovation, and authenticity. Brooks shoes are known for their consistent sizing, but it's recommended to buy half-a-size to a full-size up from your regular casual shoe size. If you already have running shoes that fit well, you can use the same size when buying Brooks shoes. To find your perfect size, measure your foot length using a tape measure or ruler and refer to the Brooks Size Chart. If your foot length falls between sizes, choose the larger one. To accurately determine your shoe size, follow these steps: 1. Measure your feet in the afternoon when they are at their fullest. 2. Stand when measuring to avoid any pressure on your feet. 3. Wear socks when taking your measurements. 4. Be precise and measure both feet separately. 5. Use a tape measure or ruler to get accurate measurements. By following these steps, you can find the perfect fitting Brooks running shoe size for you. To find the perfect Brooks running shoes, you'll need to measure your foot length and width. Stand on a piece of paper with your body weight evenly distributed over your right foot, as they're not the same length. Take note of the biggest measurement for determining your shoe size. Measure vertically down the length of your foot tracing to get your foot length and horizontally across the widest part for your foot width. Once you have your measurements, use the Brooks sizing chart to determine your corresponding shoe size. Keep in mind that Brooks shoes typically run a bit small, so consider ordering a size up if you're unsure. For men's shoes, there's a 1.5-size difference between women's and men's sizes, but the width remains the same. Brooks offers two fits: classic and StealthFit. The classic fit provides comfort, consistency, and support, while StealthFit is designed for performance and adaptability. With so many sizes and widths available, you're sure to find the perfect pair of Brooks running shoes with the right size and fit.ARTICLE
