Sustainable Procurement Policy

July 2026

Morphum Environmental Ltd (Morphum) is an environmental engineering and consulting company committed to sustainable practices in all aspects of its activities, including procurement.

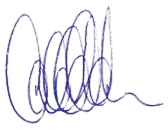

Our aim is to achieve a sustainable balance in the Morphum procurement process by considering environmental, social and economic factors when purchasing products and services. Procurement decisions are made with an understanding of wider ecological and societal impacts and, where practicable, support local communities and sustainable business practices.
Products and services are reviewed against established assessment criteria by the Environmental Management System (EMS) team or other nominated representatives.

Morphum is committed to:

- Assessing the purchase of products and services in terms of:
    - Waste minimisation
        - Product lifecycle impacts and end-of-life solutions, including re-use, recycling and responsible disposal
        - Opportunities to minimise greenhouse gas (GHG) emissions
        - Reducing waste sent to landfill
        - Supporting positive social and economic outcomes within local communities
- Giving preference to suppliers and service providers who:
    - Have implemented an Environmental Management System (e.g. ISO 14001 certified or equivalent);
    - Are certified carbon neutral or demonstrate credible emissions reduction initiatives;
    - Participate in recognised sustainability-focused networks or industry programmes
    - Have implemented waste minimisation or resource efficiency initiatives
    - Support employment and economic opportunities within local communities
    - Are accredited Living Wage employers
    - Have implemented sustainable procurement practices and give preference to products certified to recognised environmental or social standards (e.g. Eco Choice Aotearoa)

This policy will be reviewed annually to ensure its ongoing suitability, effectiveness, and alignment with Morphum's environmental commitments and business operations.

This policy is endorsed by management, communicated to employees and contractors, and made publicly available.
