

SCANIA WHEEL ALIGNMENT 2025

CUTTING EDGE TECHNOLOGY FOR YOUR WORKSHOP

Powered by  **JOSAM®**

BAD WHEEL ALIGNMENT WILL RUIN YOUR CUSTOMER'S ECONOMY!

A properly aligned vehicle can reduce fuel consumption costs by up to 5%. Bad wheel alignment also increases tire wear. A wheel alignment diagnosis gives you the opportunity to plan ahead. With the help of the wheel angle measurements from a diagnosis, necessary adjustments can be made and you can avoid unnecessarily high fuel consumption and tire wear costs.

CALCULATION EXAMPLE, **FUEL**

Fuel cost reduction: 3%
Mileage/year: 200,000 km
Fuel price: 1.5 EUR/litre
Fuel consumption: 4 litres/10 km
Total cost reduction/year:
 $0.03 \times 200,000 \times 1.5 \times 0.4 = \text{EUR } 3,600$

CALCULATION EXAMPLE, **TIRES**

Premature tire change, 2 tires/year
Tire cost: 350 EUR/tire
Cost reduction/year:
 $350 \times 2 = \text{EUR } 700$

Estimated
fuel/tire cost
reduction per year:
EUR 4,300*

* Cost for wheel alignment not included in the calculation

JOSAM I-TRACK II PREMIUM

Josam i-track II is able to measure every vehicle from vans and buses to heavy-duty trucks and trailers, alone or in combination. It is even able to align huge construction vehicles such as cranes.

I-track II premium allows you to measure a truck with up to five axles (three steered and two rigid), or a combined vehicle with up to six axles, with the base kit. Universal magnetic wheel adapters are quickly attached to the wheel nuts, thereby easing operation on vehicles with aluminum rims. With additional wheel adapters, even more axles can be measured.

The wheel alignment procedure is guided by an animated software, minimizing all possible operator's mistakes.

JOSAM CAM-ALIGNER

Cam-aligner is an extremely robust and flexible system, allowing you to measure anything from an army tank to a pickup, even in the harshest of environments.

Enabled by the unique rolling method, toe and camber measurements may be taken while the vehicle is in driving position. No lifting of the axles with run-out compensation is required, alternatively the system can also be operated with standard run-out procedure.

Wireless technology is used for transmitting data between measuring units and the computer. The computer software guides the user through the measuring process and prints out measurement reports of values, before and after alignment.
