

GRANTEE ASSOCIATED SITE CONTRACT PHARMACY DESIGNATIONS

Manufacturer restriction letters use explicit language regarding “parent” entities for contract pharmacy designations. Unlike hospitals, grantee covered entities lack a parent/child relationship, so all locations are individually 340B eligible and all are listed on OPAIS as parent locations. Accordingly, grantees may designate a contract pharmacy for each 340B ID registered on OPAIS. With the exception of Eli Lilly, 340B ESP has confirmed that this is the policy for all manufacturers using their platform for pharmacy designations.

Register Contract Pharmacy on OPAIS

During the first two weeks of the quarter, register one contract pharmacy under each eligible associated site on OPAIS (does not have an entity-owned pharmacy).

Add Associated Sites to 340B ESP

Submit a request to 340B ESP through the chat to have all associated sites added to the Authorized User’s login, including a list of all 340B IDs registered on OPAIS in the request.

Coordinate with Wholesalers and TPAs

Work with the wholesaler to request new HINs and reallocate the existing bill-to/ship-to accounts from the “main” site to the associated sites. Alert your TPA that you are designating contract pharmacies.

Designate Contract Pharmacy on 340B ESP

Send the new HINs through the 340B ESP chat, noting the associated site 340B IDs, and designate the appropriate pharmacies under the associated sites for all applicable manufacturers on 340B ESP.

If submitting data for Sanofi or Gilead through 340B ESP, you will need to update the 340B ID data field to reflect the designated site ID once your wholesaler account is updated.
