

### Help prevent fires by properly preparing batteries for pickup.

If battery terminals come in contact with metal or other batteries it can cause sparks, resulting in a fire. **Due to safety, if batteries are not properly prepared, we will not take them on pickup day.**

- Cover the (+) terminals of each battery using clear packing tape.
  - *DO NOT* hide the brand name or chemistry of battery.
  - **No Scotch™ tape** (vendor request – prone to come off during shipment)
- Larger batteries such as cellphones batteries can go in a clear plastic bag.
  - *Only one battery per quart size bag.*
- If batteries are swollen, corroded, leaking, or showing burn marks place them together in a clear plastic bag for easy identification. Keep separate from other batteries.
  - *Damaged batteries require special handling.*
- When the batteries have been properly prepared, please place them in your Recycle Plus battery bag for pickup.

#### How to tape Batteries

Cylindrical

Button Cells

9 Volt

Zip-Seal

Clear Plastic

#### Accepted bags

541-736-3600
