FACADES FOR TOMORROW
BUILT FOR THE FUTURE

WOODFAC NAPSU ALUFAC

WHEN YOU VALUE QUALITY

At Nordisk Profil, we do not just deliver facades or single components. We deliver patented facade systems as complete solutions where quality is embedded in every detail, from materials and installation to finish and long-term durability.

Subsidiary company: Nordisk Profil GmbH (Germany)

Our European reach

NORDISK PROFIL

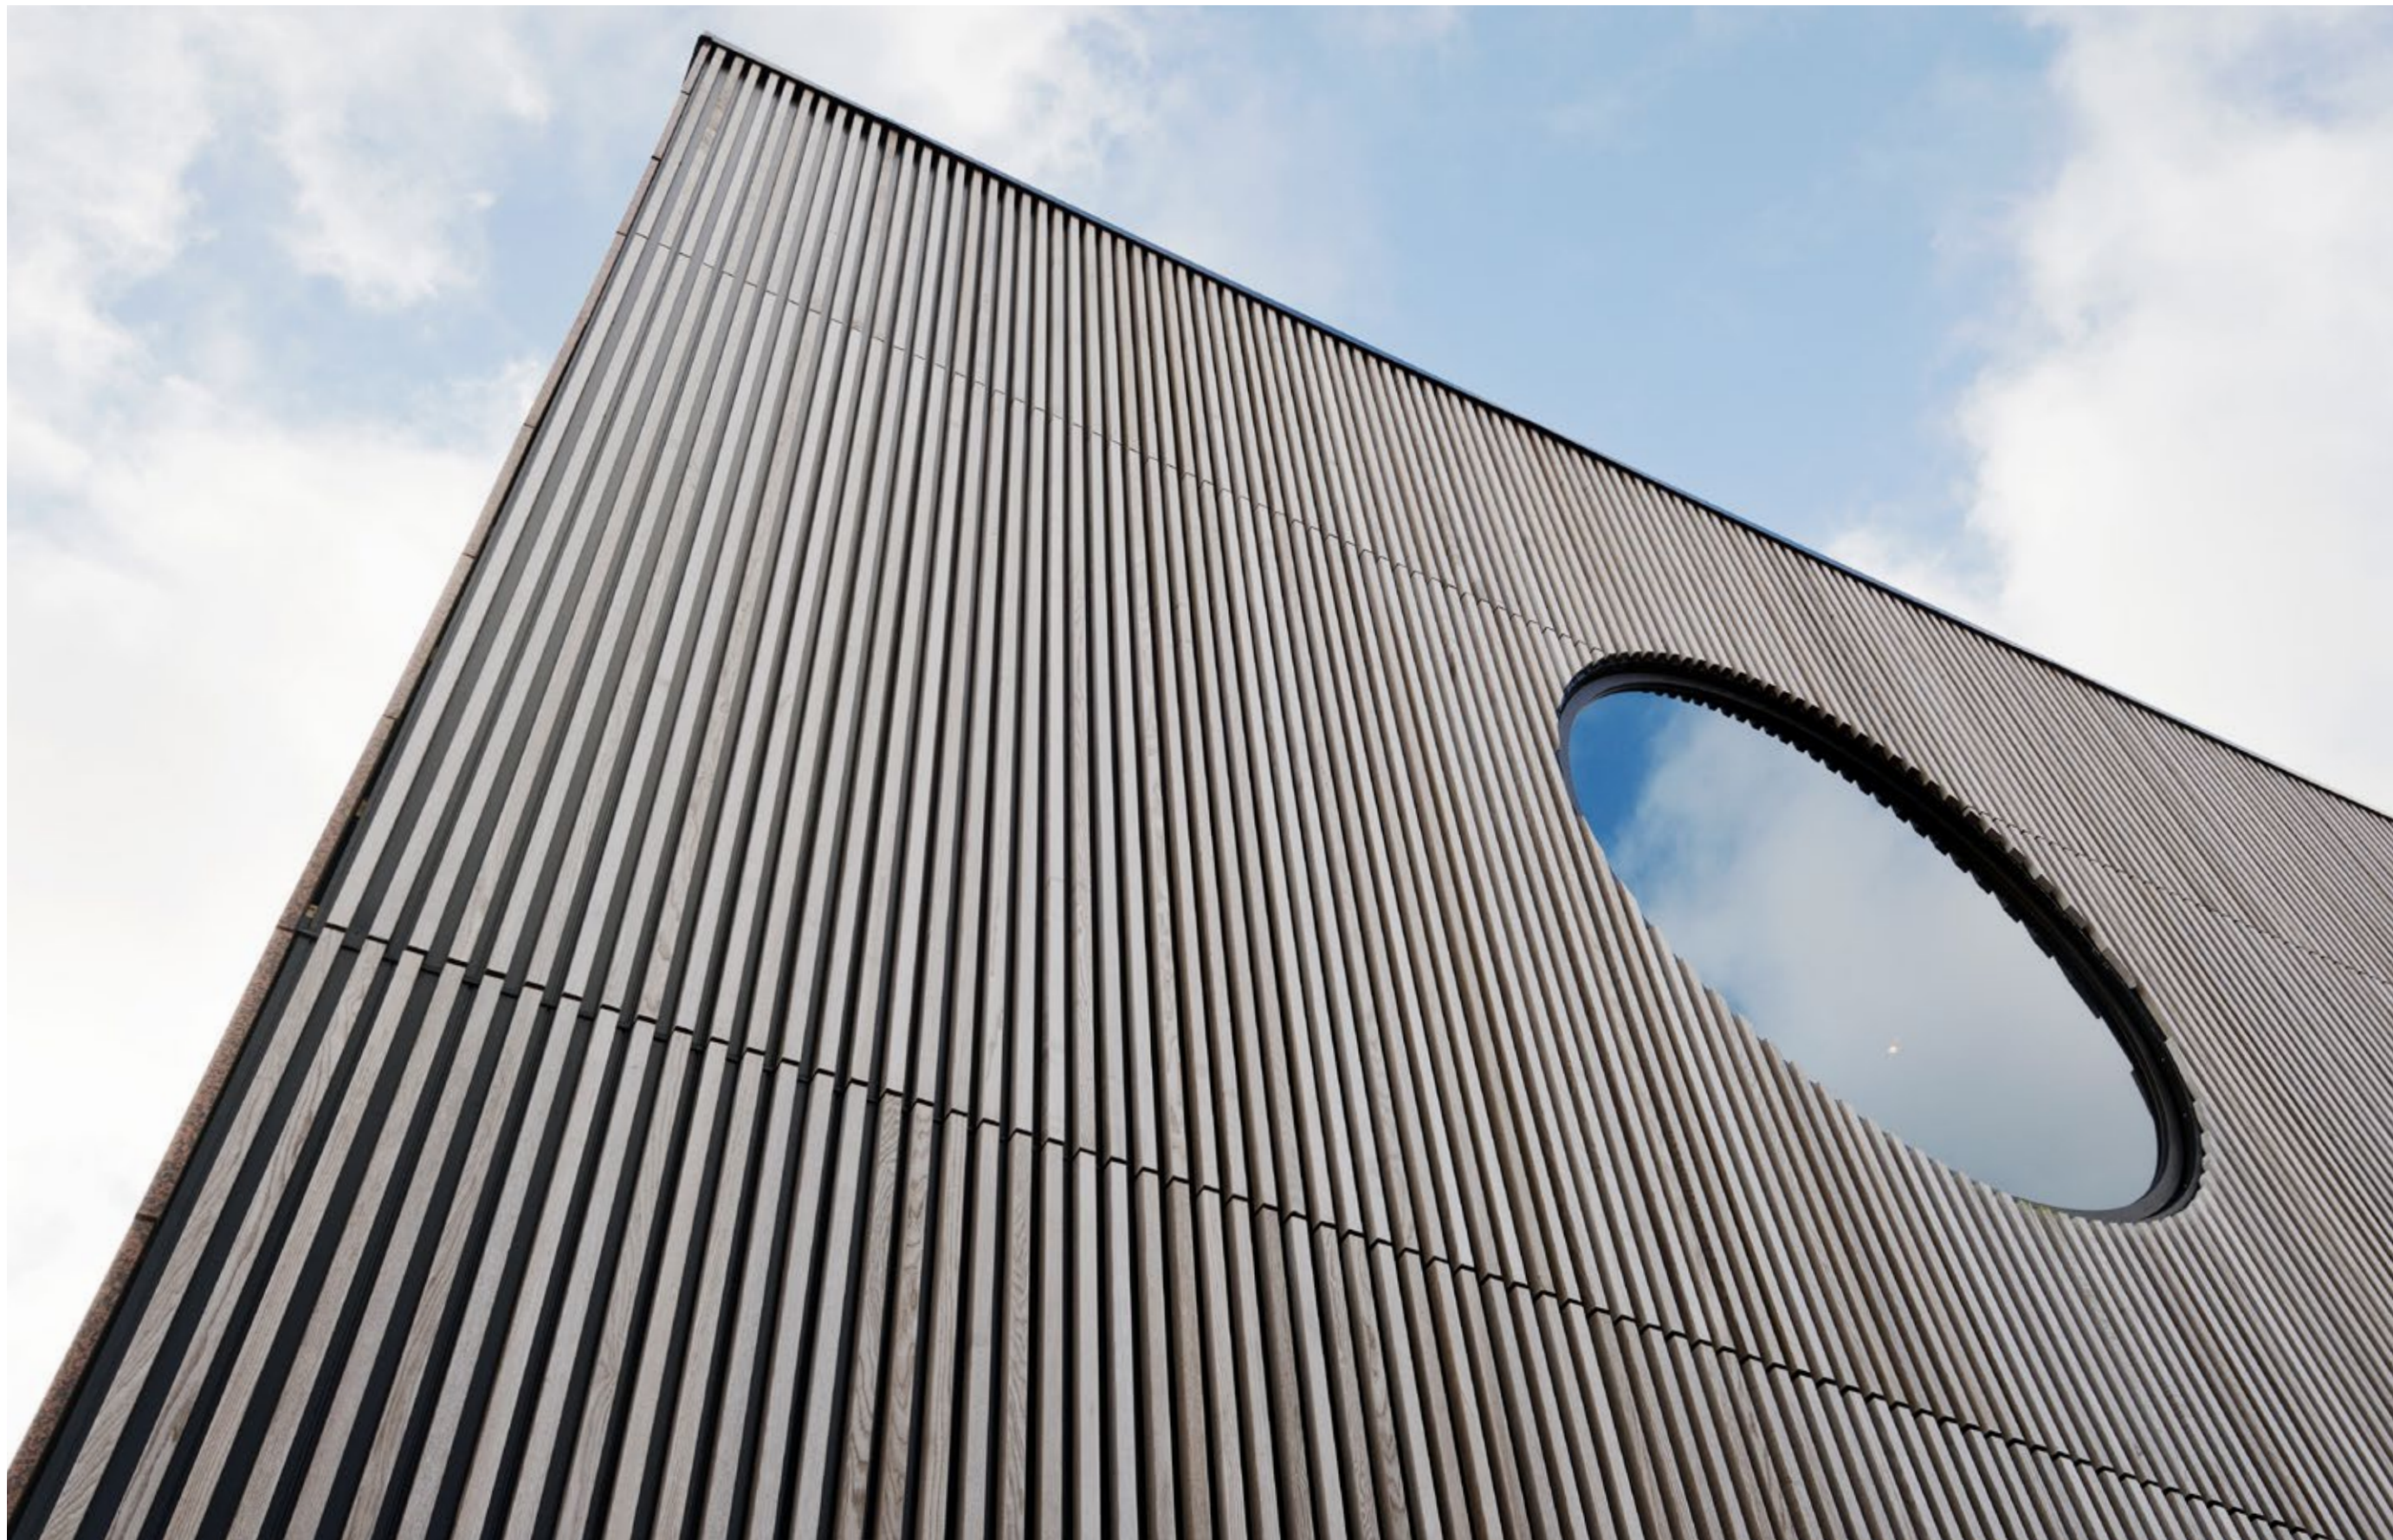

LOCAL ROOTS, EUROPEAN REACH

Nordisk Profil A/S is a Danish company founded in 1993.

Since then, we have grown to become a leading specialist, manufacturer, and supplier of patented and exclusive facade systems for all types of buildings.

Our head office is located in the heart of Copenhagen, Denmark. From here, we manage all sales in the Nordic region and provide full support to our German subsidiary as well as selected partners across and beyond Europe.

Nordisk Profil GmbH, based in Paderborn, Germany, represents our facade solutions throughout the European market.

READY FOR CHANGE

Designed for long-term performance, our systems are made to adapt. With modular construction and thoughtful detailing, facades can be extended, reconfigured or refined over time. Ready for what comes next, without starting over.

OUR THREE CORE VALUES

CREATIVE

We dare to think and work in new ways. We create and develop solutions with attention to both function and form. Our creative process releases ideas, and every project is given its own story.

PROFESSIONAL

We take responsibility to fully engage with each task. We work competently, with a strong desire for knowledge and professional pride. We demonstrate care and credibility in everything we do.

BALANCED

We find the right balance between ideas and economics. We maintain an overall perspective, without losing attention to detail.

WHERE DESIGN MEETS ENDLESS POSSIBILITY

Our facades are made to follow architectural intent. With tailored profiles, custom spacing and flexible configurations, they open up freedom in form, character, unrestricted creativity and expression.

OPEN SYSTEMS

WOODFAC CLICK & NAPSU

An ode to living facades.

Woodfac Click and Napsu are our two open facade systems, developed to meet modern architectural demands through precision, adaptability and clean lines.

Woodfac Click features wooden lamellae while Napsu is crafted with aluminium lamellae, both supported on a underlying structure of recycled aluminium.

The lamellae are custom-made in your chosen lengths, spacing, and orientation - horizontal, vertical, curved, or even overhead – offering complete design freedom without compromise. The system is easy to assemble, sustainable, and ready to evolve with future demands.

These systems expose the building's structural facade while softening it with cadence and texture. The result is a dynamic interplay of light, shadow, and material, adding depth and character to the architecture.

Woodfac Click and Napsu are more than facade systems. They are frameworks for creativity, giving architects the tools to craft facades that are open, expressive, and future-proof.

CERTIFIED GREENLINE ALUMINIUM

Clean in expression. Conscious by design.

Our certified Greenline aluminium combines architectural clarity with a significantly lower footprint compared to primary aluminium.

CLOSED SYSTEMS

WOODFAC PANEL & ALUFAC PANEL

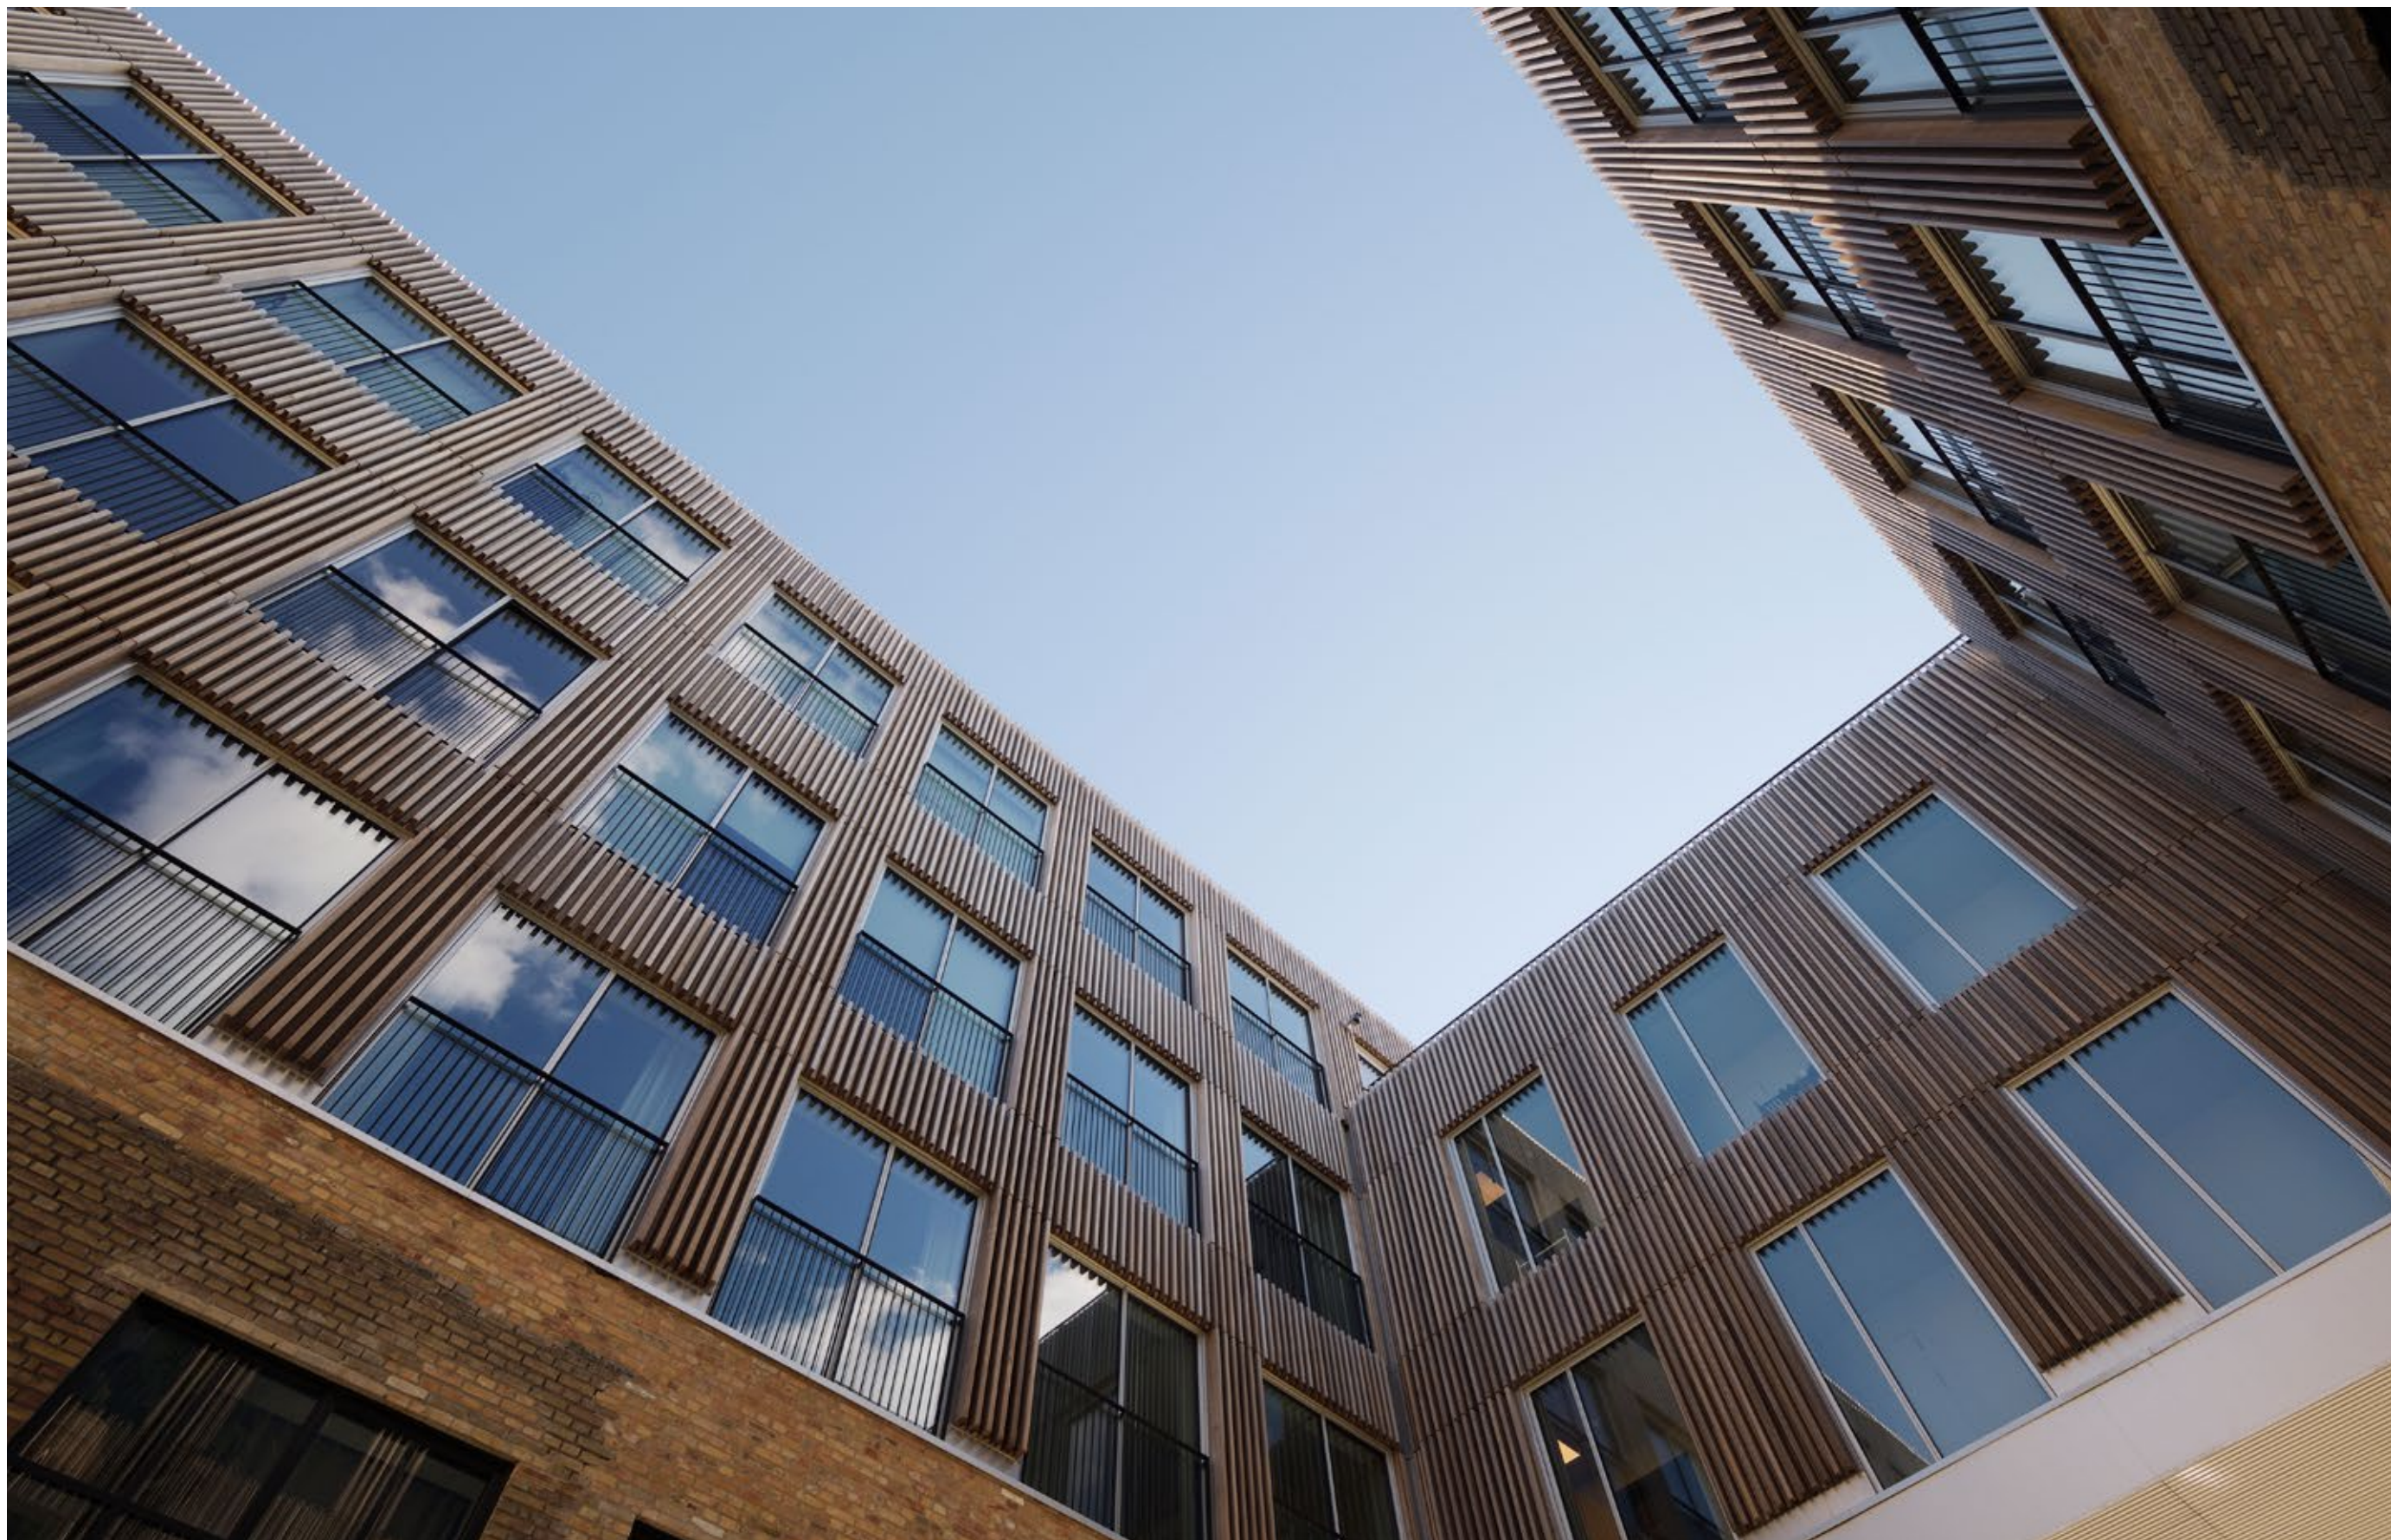

Systems that do more than cover.

Woodfac Panel and Alufac Panel are our two closed facade systems, combining architectural clarity with documented performance and a material responsibility that functions as a closed climate screen, protecting the building from weathering.

Woodfac Panel carries the warmth of optional wooden lamellae. Alufac Panel reflects the clean strength of aluminium. Both rest on a underlying structure of recycled aluminium, a quiet commitment to sustainability woven into every element.

With a range of precision-designed accessory profiles, edges are neatly finished, frames take shape around doors and windows, and the facade comes together. Complete, refined, and technically resolved.

Woodfac Panel and Alufac Panel are not just closed facade systems, they are engineered solutions that combine design flexibility with structural clarity, enabling facades that are future-ready and architecturally refined.

A LIVING MATERIAL RESPONSIBLY CHOSEN

We offer a curated selection of certified woods, sourced with care and documented for traceability. A material choice that brings warmth, character and responsibility into the facade. Proof that design excellence and environmental care can go hand in hand.

FIRE PROTECTION

Safety woven into every facade solution.

At Nordisk Profil, fire safety is never an afterthought. It's an integral part of the design journey. From the very first spark of an idea to the fully installed facade, we're more than just suppliers.

We are your trusted fire safety partners, guiding you through complex legislation and technical requirements to keep your facade solution secure, compliant, and on budget.

Addressing fire strategy early on helps shape material choices, dimensions, and design. We understand just how critical it is to get it right, and to back it with clear documented evidence.

With Nordisk Profil, you receive full fire technical approval and documentation, ensuring your facade is as safe as it is beautiful. A protective skin designed with care, responsibility, and expertise from beginning to end.

Parking Distelweg, car park, **Woodfac Click & Woodfac Panel**

A close-up, low-angle shot of several wooden slats, likely part of a building's facade or a modern architectural element. The slats are light-colored wood with visible grain patterns and are arranged in a perspective that leads the eye towards the top of the frame. The background is a clear, bright blue sky.

VERIFIED AND PROVEN IN PRACTICE

With full documentation, CE marking, EPDs and tested fire classifications, our systems are built to meet demanding technical standards. Giving you confidence in a facade solution backed by documented safety, compliance and performance.

CLIMATE CONSCIOUS

Building with nature in mind.

You can never be too green! At Nordisk Profil, sustainability runs through our veins. As both manufacturer and supplier, we embrace the responsibility of driving climate-conscious construction forward, helping reduce CO₂ emissions in an industry where every choice matters.

Our certified wood and Greenline aluminium, the heart of our facades, offer climate-friendly solutions with a documented footprint. By choosing materials and partners who prioritise sustainability and care about the climate, you contribute to a greener future.

But our commitment goes beyond materials. From mindful sourcing and responsible production to modular, reusable designs, our facade systems carry a lifecycle mindset rooted in circularity and longevity. They are built to transform, adapt, and endure, reducing waste and maximizing value over time.

All our facades are CE-marked, meeting the highest European standards for safety and quality. In addition, we provide the market's best EPDs for aluminium.

At Nordisk Profil, green is not a trend, it's our foundation. Together, we create facades that respect the environment and define the future of architecture.

PLUG AND PLAY PRECISION

Designed for simplicity. Easily assembled.

Built around three core components and a clear three-step installation principle, our systems are made for efficient assembly and precise results. Every detail is resolved to fit with clarity and ease, bringing the facade together with technical confidence.

A TRUSTED FACADE PARTNER

At Nordisk Profil, we do not see limitations. We see possibilities.

We collaborate with architects, developers and contractors on B2B construction projects where design quality, material performance and documented fire safety are essential.

Through close dialogue, we shape bespoke facade solutions tailored to each building, each vision and each technical demand, from early concept development to final installation.

We provide professional consultancy and technical sparring within:

Facade design

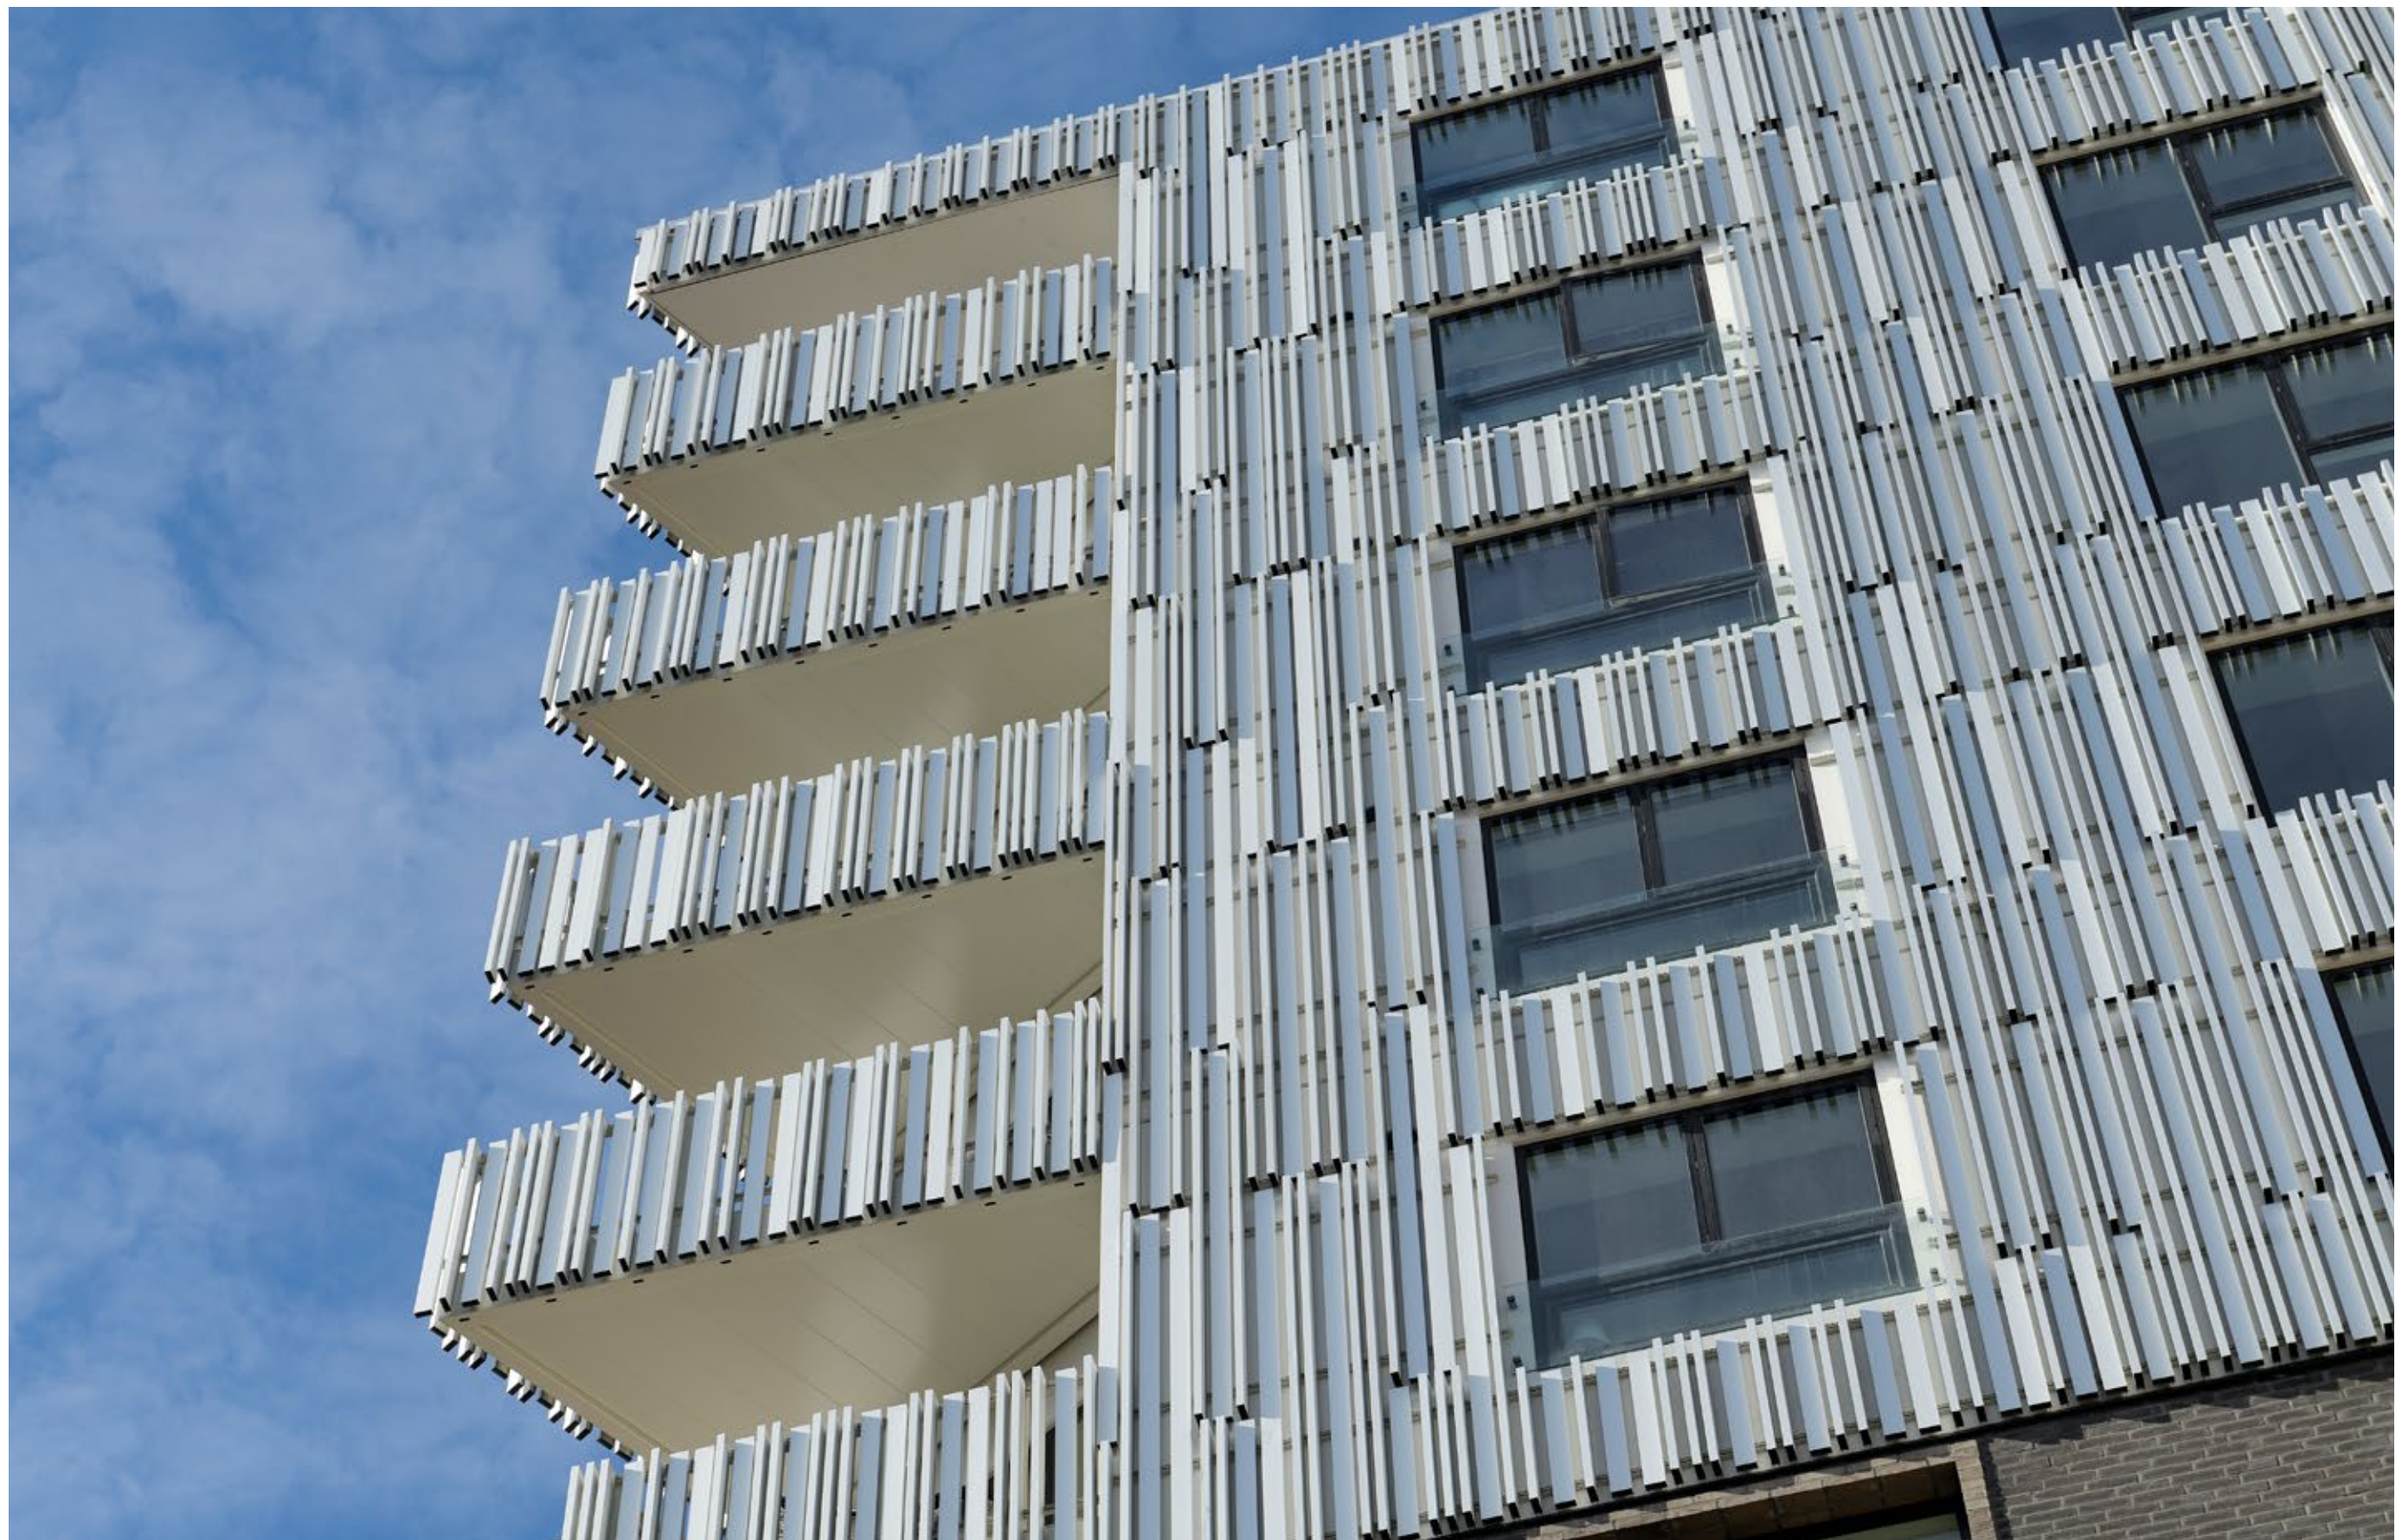

Fire safety

Climate-conscious construction

Specialist engineering and statics

CAD modeling

All supported by documented technical performance, certified materials and proven fire safety.

DESIGNED TO INTEGRATE

Quietly coordinated. Future ready.

Our systems do not compete with other technologies.

They make space for them. Whether integrating solar panels, perforated plates, green roofs, etc., our modular facades support a broader architectural vision.

Havnemøllen P1, car park, **Napsu**

BEYOND THE SURFACE

At Nordisk Profil, we believe a facade is never just a facade.

It's a dialogue between material and meaning, light and structure, vision and place.

Every project is a collaboration between you and us. Filled with expectations, hopes and the desire to create the best.

Whether in wood or aluminium, open or closed, each facade system we create is designed to endure, to evolve, and to belong.

We look forward to shaping the future, together. One thoughtful facade at a time.

FACADES FOR TOMORROW, BUILT FOR THE FUTURE.

Thank you for exploring our world,

NORDISK PROFIL
