

Comparison of the CKS – KM & Enterprise AI and CKS – Information Architecture for AI Solutions

This document summarizes how the two courses differ and complement one another based on the materials provided.

Introduction

These courses are complementary rather than competitive. The CKS – KM & Enterprise AI Master Class focuses on organizational readiness, strategy, business value, and implementation planning for Enterprise AI. The CKS – Information Architecture for AI Solutions course focuses on designing the information structures that enable trustworthy AI, including metadata, taxonomy, semantic layers, retrieval, and governance.

High-Level Positioning

Category	CKS – KM & Enterprise AI	CKS – Information Architecture for AI Solutions
Primary Focus	Enterprise AI strategy and organizational readiness	Information architecture for trustworthy AI
Perspective	Organization	AI solution
Starts With	Business problems	Defined AI use case
Ends With	Enterprise AI roadmap	IA-for-AI Blueprint
Core Discipline	Knowledge Management	Information Architecture
Business Emphasis	High	Moderate to High
Technical Depth	Moderate	High
Primary Deliverable	Implementation roadmap	Information Architecture Blueprint

Successful Enterprise AI requires both organizational readiness and information readiness.

- CKS – KM & Enterprise AI prepares organizations to identify AI opportunities, assess readiness, align Knowledge Management with AI, and develop an implementation roadmap.
- CKS – Information Architecture for AI Solutions teaches participants how to organize enterprise information so AI systems can retrieve, ground, govern, and explain answers reliably.

Customer Decision Guide

Choose KM & Enterprise AI if you need strategy, readiness, governance, business value, and an implementation roadmap. Choose Information Architecture for AI Solutions if you need metadata, taxonomy, semantic layers, RAG design, retrieval optimization, and AI-ready information structures.

In Summary

Successful Enterprise AI requires both organizational readiness and information readiness.

The CKS – KM & Enterprise AI course prepares leaders to identify opportunities, assess readiness, and develop an Enterprise AI strategy grounded in Knowledge Management principles. *Delivery: 2-day live virtual class and new self-paced program launching Sep, '26*

The CKS – Information Architecture for AI Solutions course focuses on designing the information structures—including metadata, taxonomy, semantic models, governance, and retrieval—that enable trustworthy AI systems. *Delivery: 2-day live virtual class, with plans to release a self-paced version in Q4, '26 or early '27,*

Together, the two courses provide a complete learning pathway from AI strategy through AI solution architecture.

KMI Tip: bundle the two programs and get a substantial reduction on your quote.
