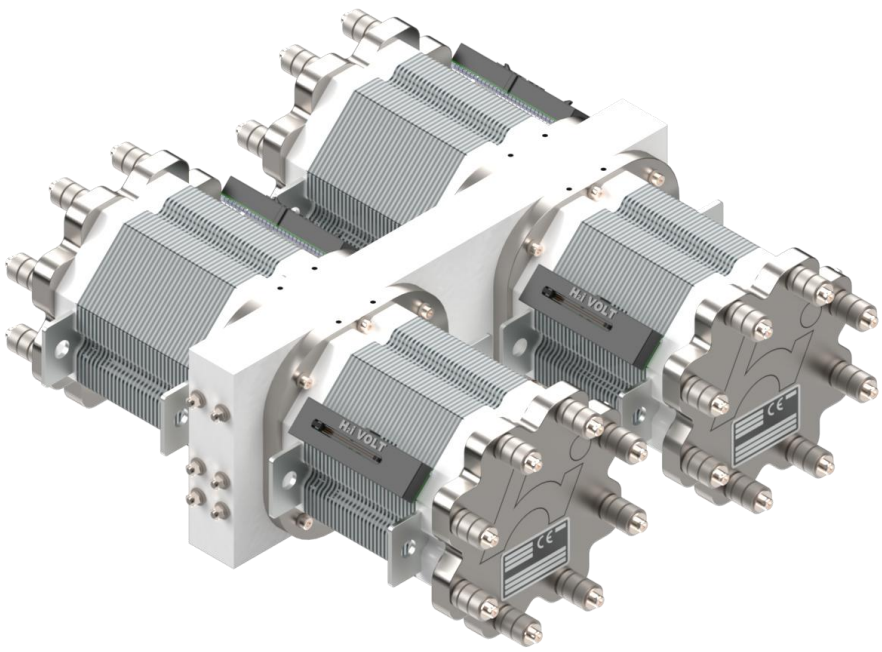
Green Hydrogen

AEM ELECTROLYSIS UNIT

H2i-POWERPACK

Four H2i-AEM-Cores on one manifold block: 26 kg of green hydrogen per day and the heart of our H2iVE-SKID.



26 kg/d
hydrogen production

60 kW
maximum power

33 bar(g)
H_2 outlet pressure

Compact & high power density
Four H2i-AEM-Cores share one manifold block, so the unit stays small and easy to integrate.

Follows wind and solar
Load changes of up to 5 %/s track fluctuating renewable power or flexible industry demand.

Made in Europe
Built in Austria and designed for highly automated production to automotive standards.

Iridium-free
The H2i-AEM-Cores need no iridium, a scarce and costly raw material.

H2i-POWERPACK

Technical data

Green Hydrogen

PRODUCTION

H_2 production, nominal	1.1 kg/h · 12 Nm^3/h
O_2 production	8.6 kg/h · 6 Nm^3/h
H_2 outlet pressure	up to 33 bar(g) [1]
O_2 outlet pressure	up to 5 bar(g)

POWER

Maximum power	60 kW [2]
Current range	80-240 A
Rated voltage	250 V
Specific energy consumption	48 kWh/kg [3]

ELECTROCHEMISTRY

Technology	AEM water electrolysis (AEMWE)
AEM core	4 standardized H2i-AEM-Cores sharing one manifold
Operating temperature	Up to 70 °C

MEDIA AND HEAT

Pure water consumption	max. 9.7 kg/h
KOH flow	up to 2.9 m^3/h
Heat to KOH circuit	7.7 kW BoL | Up to 17.3 kW (design value)

INTEGRATION

Dimensions	575 x 750 x 250 mm
Weight	190 kg
Certification	Designed for CE conformity (PED 2014/68/EU) and ISO 22734

Included in the H2i-POWERPACK

- Four standardized H2i-AEM-Cores
- Manifold block with connections for KOH, H_2 and O_2
- Mounting brackets for the SKID module

Provided by the H2iVE-SKID

- KOH circuit, water supply and heat removal
- H_2 and O_2 handling and safety equipment
- Power electronics and control

[1] Outlet pressure; allows for pressure losses so the H2iVE-SKID still delivers 30 bar(g).
[2] Maximum electrical power at end of life; best efficiency and lifetime at part load.
[3] At beginning of life, without balance of plant.
Preliminary data, subject to change.
