

NEKOOSA BIRD FILMS

Nekoosa Bird Films make glass more visible to birds, helping reduce window collisions by up to 94%. Available in 3 patterns.

NEKOOSA BIRD FILMS

Bird collisions with glass are a major issue, often caused by reflections of sky, trees and surrounding environments. Nekoosa Bird Films create a visible pattern across the glass, helping birds recognise it as a physical barrier and reducing bird strikes by up to 94%. Next to bird protection, they provide added safety by holding shattered glass together in the event of impact.

These films are widely applicable on a variety of glass surfaces, including padel court glass, glass sound barriers along highways, hospital windows, and many more.

The range includes three solutions: Frosted Dot, Double Frosted Horizontal Lines and Solar Dot, with Solar Dot providing the added benefit of solar heat and UV rejection.

All three films are weather resistant, UV stabilised and scratch resistant, with up to 7 years outdoor durability.

APPLICATIONS

- Padel courts
- Glass pedestrian bridge
- Hospitals
- Glass sound barriers
- And many other glass surfaces

Double Frosted Horizontal Lines

Solar Dot

Technical data

	Frosted Dot	Double Frosted Horizontal Lines
Face Film		
Finish	Clear, frosted dots	Clear, double frosted horizontal lines
Material	Polyester	Polyester
Thickness (µm)	100	100
Release liner		
Type	Clear siliconised synthetic	Clear siliconised synthetic
Thickness (µm)	25	25
Outdoor durability (years)	7	7
Application method	Wet	Wet
Roll size	1520mm x 30m	1470mm x 30m

	Solar Dot
Face Film	
Finish	Silver clear, etched dots
Material	Polyester
Thickness (µm)	100
Release liner	
Type	Clear siliconised synthetic
Thickness (µm)	25
Outdoor durability (years)	7
Application method	Wet
Roll size	1520mm x 30m
