FOCUS REG

One data store. Every return reconciled.

Turn your source data into reconciled, submission-ready returns

FOCUS-REG automates regulatory reporting end to end, from the extracts you already produce to returns reconciled to your trial balance.

THE PROBLEM

When returns are built in Excel and keyed in by hand, figures are hard to trace, checks come late and the process relies on a few people.

Manual workbooks
Returns are built in Excel, then keyed into each form.

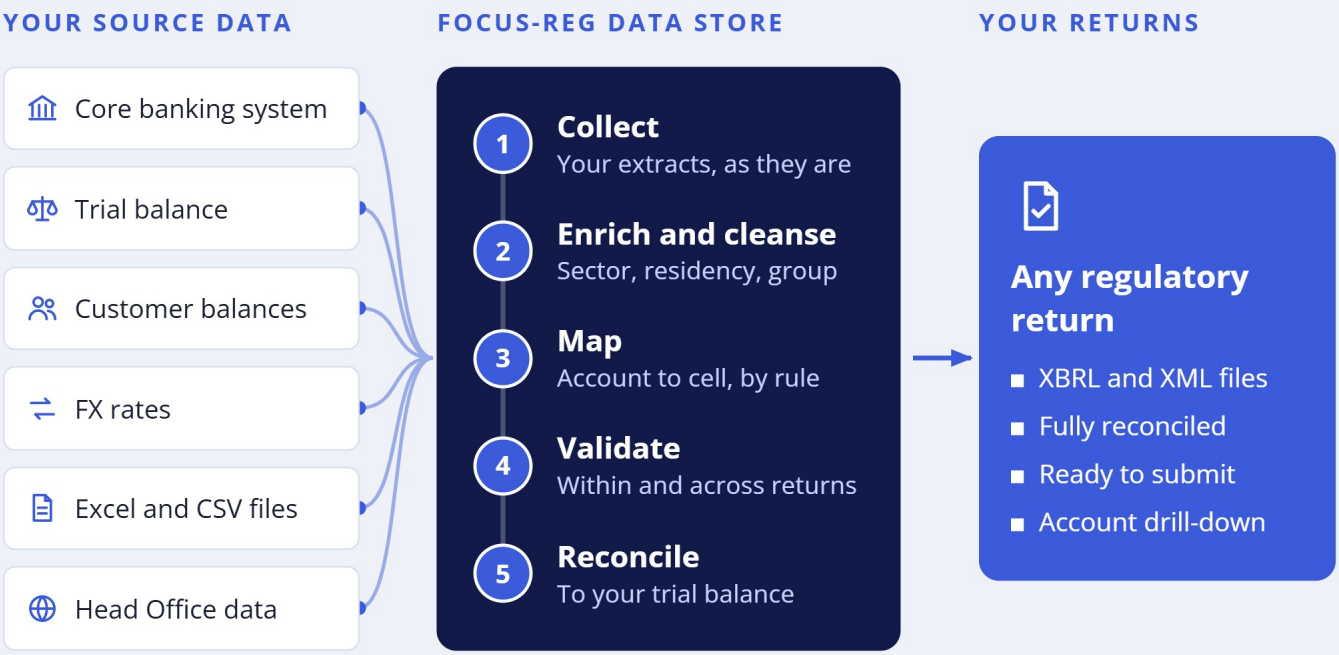

Key-person risk
Mapping knowledge sits with a few people.

Late checks
Reconciliation to the trial balance is done late, by hand.

Constant change
Bank of England, PRA and FCA updates mean rework.

HOW FOCUS-REG WORKS

We manage every step for you, from collecting the extracts your systems already produce to delivering validated, reconciled returns.

Every figure explained, every change recorded

Each return is reconciled to your trial balance, with full data lineage, drill-down to account level and an audit trail of every change.

CAPABILITIES

Data Integration
- Your existing extracts
- Core banking and Excel
- No new data formats

Enrich and Map
- Sector and residency
- Rule-based mapping
- New accounts mapped

Reconciliation
- To your trial balance
- Across every return
- Exception reporting

Full Data Lineage
- Every cell traced
- Bank of England rules
- Account-level detail

Audit Trail
- Vouchered adjustments
- Every change logged
- Past periods re-run

Delivery and Support
- On-premise or cloud
- 24/7 support included
- Updates in the licence
