IRIS - Identity Risk Intelligence System

Identity signals are scattered across directories, SaaS apps, cloud platforms, and HR systems. IRIS is the identity intelligence foundation of the Zluri platform, turning fragmented identity data into real-time context on access, risk, and identity relationships.

THE CHALLENGE

You Have the Data. You Don't Have the Answers

Even with identity data available, security teams spend hours piecing together the context needed to answer:

✕ Who has access to what, and is it still needed?
✕ How was it granted, and when did it change?
✕ Where is the risk, and what needs fixing first?

THE SOLUTION

A Unified Intelligence Engine for Next-Gen Identity Security

Aggregation & Staging

Ingests identity signals across directories, SaaS, cloud, and HR systems, preserving source lineage to build a complete identity data foundation.

Normalize & Canonicalize

Standardizes formats, merges duplicate identities, and creates canonical records for consistent, reliable analysis.

Relationship Graph

Maps how identities, entitlements, and applications connect, revealing effective permissions and access paths across the environment.

Intelligence & Decisioning

Detects anomalies and risk patterns, prioritizes exposure, and recommends remediation actions.

See Every Identity. Surface Every Risk. Speed Up Remediation.

Comprehensive Identity Visibility
Connect identity signals across workforce and machine identities into a single source of truth.

Proactive Risk Prioritization
Surface orphaned accounts, privilege creep, dormant access, and excessive entitlements, ranked by what needs attention first.

Complete Access Context
See who has access, how it was granted, and the associated risks.

Faster Risk Response
Spot identity risks early, investigate details, and take action without leaving the platform.

THE IMPACT

Proven Value with Zluri

10+
pre-built dashboards and 50+ widgets, ready from day one

15+
app risk insights across different risk categories

Easy-to-use
drag-and-drop interface to customize analytics

Zero
technical expertise with no complex setup required

Put Intelligence Behind Every Identity Decision
