Identity Security Posture Management

Built to Fix Every Identity Risk, Not Just Flag It.

Most identity tools show problems. Zluri fixes them. Zluri ISPM continuously discovers, prioritizes, and remediates identity risk across SaaS, cloud, and enterprise systems, from over-privileged accounts to orphaned access, identity drift, and policy violations.

THE CHALLENGE

Identity Risks Don't Wait For Your Next Review. Your Controls Shouldn't Either.

80% of breaches involve compromised identities.[1] Yet most organizations still rely on periodic access reviews while permissions change constantly. Risk accumulates quietly until an incident exposes it. By the time reviews run, the damage is already done.

✕ Identity data is spread across IdPs, SaaS apps, directories, and cloud platforms
✕ Bots, API keys, service accounts, and AI agents now outnumber human users 82:1[2]
✕ Temporary access quietly becomes permanent entitlement creep
✕ Security teams still investigate identity risk through tickets and spreadsheets

THE SOLUTION

Every Identity Risk. Found, Scored, and Fixed.

Discover Every Identity

Discover human and machine identities with 300+ integrations, map entitlements, detect shadow IT and unmanaged access, and correlate identity data with activity signals.

Prioritize the Risks That Matter

Quickly surface over-privileged accounts, dormant identities, MFA gaps, misconfigured policies, and toxic permission combinations using real-time risk signals.

Remediate Identity Risk Automatically

Revoke excessive privileges, trigger 1500+ automated remediation actions, build workflows with a no-code policy engine, and maintain complete audit trails.

Monitor Identity Posture in Real Time

Track identity posture continuously with real-time risk dashboards, remediation history, trend analysis, and compliance reporting for SOC2, ISO27001, HIPAA, and SOX.

Reduce Identity Risk, Audit Effort, and Time to Value. All at Once.

Enforce Least Privilege
Automatically right-size access as employees change roles and adopt new tools.

Secure Non-Human Identities
Discover, monitor, and remediate risk across service accounts, API keys, bots, and AI agents.

Maintain Continuous Compliance
Automatically collect evidence and maintain audit-ready records at all times.

Eliminate Offboarding Gaps
Detect and remove lingering access from former employees with a complete audit trail.

From Months to Weeks
Deploy in weeks, not quarters, and start seeing value before legacy platforms finish onboarding.

THE IMPACT

Proven Value with Zluri

10x
faster access reviews

Weeks
to value, not months
of deployment

Uncover All Your Identity Risks
