Project Description:

This project will establish a 4.4 acre riparian forest buffer on an unnamed tributary of Pine Creek on a site recovering from agriculture. In the early 1900's the property had been tilled and the stream straightened and channelized. In the last 10 years the site has had scattered native shrub plantings and in-stream Best Management Practices. There are some box elder, ash, black locust, silky dogwood, gray dogwood, American plum, speckled alder and nannyberry viburnum presently growing on the site. Invasive/noxious species are generally light - moderate and consist of teasel, thistle, exotic shrubs and reed canary grass. Exotic cool season grasses are growing on approximately 50% of the site. This project will benefit water quality by controlling the exotic vegetation and establishing forest cover.

The property currently has an existing Conservation Reserve Enhancement Program (CREP) CP 29 riparian buffer contract along the stream. This RFP will expand the CREP existing buffer. See Attachment A – Riparian Buffer Planting Plan Map. **No work is to be done within the CREP CP 29 area (red area on the plan map). The services for this RFP will be completed only in the green areas indicated on the plan map.**

Post planting establishment services are NOT included in this RFP.

The successful bidder will be responsible for the following:

Service 1: Site Preparation

- **Invasive Weed and Exotic Vegetation Control:** Invasive/noxious and exotic vegetation control (including all woody and non-woody exotics) via 2 herbicide applications will occur in September - October of 2025 and will occur throughout the entire 4.4 acre project area (**green** area as depicted in Attachment A).
 - Contractor will conduct two treatments and will treat all exotic vegetation. The primary treatment will occur in September 2025 and a follow-up visit will occur in early October 2025.
 - Primary species to be controlled include all woody invasives, thistle, teasel, reed canary grass and exotic cool season grasses.
 - The woody invasives do not require removal after treatment and are to be left standing.
- **Spot Spray at Tree Planting Locations:** Apply appropriate herbicide (post emergent/non-selective required and pre-emergent/residual) in minimum 6 FT x 6 FT square spots to the 630 locations to be planted with trees. This will occur in September – October of 2025 and will be done at least 2 weeks prior to planting.

Service 2: Implementation

- **Tree Planting:** Planting will occur in fall (October/November) of 2025 and will consist of planting 3-gallon containerized stock (2-gallon may be acceptable pending availability but 3 gallon is strongly preferred) on 4.4 acres of new buffer. See the plan map in Attachment A for location. **Only the green areas on the map are to be planted.**
 - A total of 630 trees will be planted throughout the project area.
 - A total of 176 rigid, 5-foot tree shelters with stakes will be installed on all oak trees. Shelters will NOT be installed on any other species.
 - Trees will be planted in the ecologically appropriate areas, with species tolerating wet conditions planted in wet areas, and species preferring dry sites planted in drier areas.
 - No shrubs are to be planted.
 - The following species are required to be planted in the listed quantities. **If species, sizes or quantities are not available, contractor will contact Chesapeake Conservancy to discuss substitutions PRIOR to ordering trees or planting.**

Common Name	Scientific Name	Quantity
American sycamore (FACW)	<i>Platanus occidentalis</i>	90
