Human & machine collaboration is the future of the SOC

The SOC has reached a breaking point. AI-powered attacks accelerate faster than human teams can respond.

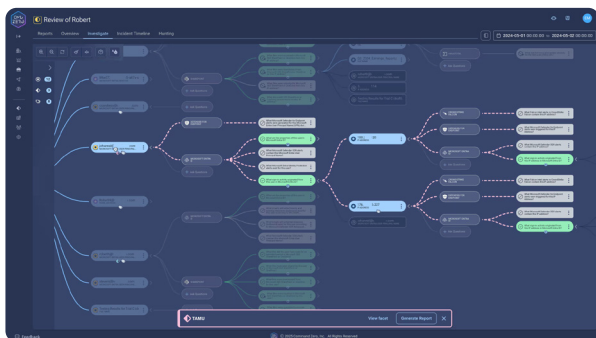

Relying solely on automation, AI SOC agents or throwing more bodies at the problem won't work.

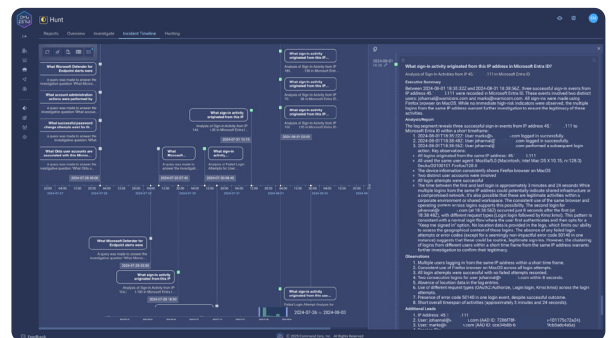

Security operations demand precision with a very small margin for error. Human intelligence will remain central to the SOC.

Get the best of AI, Automation and Human intelligence

Benefits

- Scale to analyze all alerts
- Add custom data sources to analysis
- Consistent and auditable results
- Enable collaboration and learning

Sample projects

- **SOC modernization** - Maximize value from existing SecOps investments
- **SIEM migration** - Increase capabilities independent of SIEM platform
- **AI adoption for the SOC** - Embrace the power of LLMs with structure and control
