BEAMISH COBBLE 50mm Block Paving

The Beamish Cobble typifies the re-creation of 'olde worlde' style period paving. This inherently good looking cobble is of a design of 'yesteryear' and at home with any period style property.

Its applications however are more varied and can look surprisingly at home with contemporary styles of housing. Its surface texture, shape and appearance make it ideal for driveways.

Beamish Cobbles can produce a truly authentic driveway for your perfect home. The genuine random cobble appearance is created using two widths of block, 170mm and 130mm, incorporating four varying lengths. Now available in five distinct colours.

Due to the use of natural aggregates in the manufacturing process, the colour of the finished products will be marginally varied in each production batch. Every effort has been made to achieve accurate colour representation within this brochure, however due to limitations of the printing process colours may vary slightly. It is recommended that you visit a local builders merchant depot if you require visual colour matching of our products.

When applying the sealant to the surface of the pavior please check with the manufacturer for suitability as no guarantee can be given by Thomas Armstrong.

Please note that sunlight on any concrete product will naturally fade the colour over the course of time. Due to the dry mix of the material when pressed on the machine not every surface area of the pavior will be consistently smooth. A small percentage of paviers will have variable small indentations on the surface which is unavoidable due to the manufacturing process.

The photographs in this brochure should be used as a guide only and it is recommended that samples are viewed before making a purchase.
