

Industrial Washing Machines

Sustainability, Savings & Smarter Cleaning

Sustainable Cleaning Solutions for Every Industry

The Smarter Choice in Industrial Washing

Save Water

- Recirculated and filtered wash and rinse treatments.
- Rotary filter systems available to remove bulk debris and extend life of recirculated tanks.
- Intelligent use of fresh rinse waters – including recovery/re-use of water in pre-wash etc.
- Auto-Drain options that can be programmed to reduce the need for full drain downs.
- Inverter controlled Exhaust fans to minimise vapour extraction (assists heat retention).
- Overall design of any system ensures water containment within correct wash/rinse zone.
- Programmable system for optimal set up – Including pressure sensors in wash manifolds to notify of missing/ blocked jet nozzles.

Save Energy

- Programmable thermostatically controlled system with temperature set points and cut-outs.
- Ambient temperature pre-wash systems available for bulk debris removal.
- Remove last two words “for optimisation” and insert word “running” before load – So; Inverters/VFD’s are used where practical to reduce running load.
- Motors and Heating system have actual kW running time and site specific costing display on HMI “Smart Metering”.
- Stand by modes available to shut down aspects of system when not used.
- Intelligent Siemens motor control and safety circuits with fault diagnostic codes and monitored data logging.

Reduce Carbon Footprint

- Alongside water and energy, high tech dosing systems can offer pin-point accuracy for any detergent monitoring.
- Stainless steel robust standard construction, pumps and field items to ensure an extremely long-life design.
- Full service agreements available c/w customer support to ensure efficient operations are maintained throughout equipment’s life.
- IWM “in-house” factory and warehouse operations are also geared for efficiency during all stages of manufacture. IWM have a continuous improvement philosophy throughout every aspect of our operations and customer service.
- Trade in / recycling options available.

Save Money

- All IWM equipment will do the job intended; which will inevitably save money over labour/water intensive “washing by hand” or by replacing old inefficient equipment.
- IWM offer exceptional value for money, not just at purchase point but through its life time.
- Removing potential manual handling problems and providing consistent cleaning performance reduces risks of none compliance to our customers.
- Intelligent control systems will inform operators and engineers of any problems to allow a quick fix, repair or replacement part.
- Intelligent design and monitoring / diagnostics through HMI display will provide temperature and running cost data for validation purposes.

Washing Solutions for Every Industry

Wheely Bin Washers

A full range of equipment designed to accommodate all standard wheely bins from 120 – 1,100 litre units. IWM equipment is successfully operating globally in Hospitals, Waste Treatment Facilities, Recycling and Logistics hubs and food/beverage operations. All systems provide thorough cleaning inside and out to all types of bin.

Crate & Tray Washers

Equipment available for all operations; low volume (< 200 crates per hour) upto high volume systems that can accommodate 4,000 trays/baskets per hour! All machinery is designed to wash crates effectively with minimal water and energy consumption, consistently and reliably. All Industries served around the world.

Drum, Barrel and Bin Washers

For larger containers, drums, and barrels, our washers deliver a deep, consistent clean every cycle. Reduce downtime and improve operational efficiency with durable, easy-to-maintain systems.

Layer Pad Washers

Essential for keeping fragile layer pads clean and reliable. Automated cycles reduce manual labour, protect product quality, and extend the lifespan of your pads.

Pallet Washers

Trusted across warehousing and logistics sectors worldwide, pallet washers deliver fast, sustainable cleaning that keeps supply chains moving smoothly.

Dolav & Vat Washers

Heavy-duty washers built for tough applications in the food and pharmaceutical industries. Remove stubborn residues quickly while reducing manual effort and water use.

Industrial Washing Machines

For over 40 years, Industrial Washing Machines (IWM) has delivered high-quality cleaning equipment worldwide. From food to pharma, logistics to waste, our UK-built systems cut costs, improve safety, and ensure world-class hygiene. Backed by expert support, we help businesses replace outdated processes with efficient, sustainable solutions.
