

SPMU Aftercare

1. On the day of treatment, wipe over your brows with cotton wool dampened with cool boiled water. After each wipe, apply a thin layer of the aftercare ointment. Repeat this process morning and night thereafter for 7 days.
2. Ensure you do not get your brows wet for 24 hours, be extremely careful with water around the brow area for 7 days.
3. Stay out of the sun until your brows are fully healed. Factor 50 sunscreen is advised for future holidays.
4. Do not use any face creams, exfoliates, or harsh cleansers on your brows during the healing process.
5. Normal activity can be resumed immediately. We recommend that heavy exercise such as aerobic dancing, weight lifting, etc. be delayed for approximately two to three days following the procedure.
6. Your procedure will begin to oxidize immediately during the next 3-4 days, this causes pigment to become darker. Do not be alarmed, this dark colour will either flake off or fade back to the colour that was first implanted.
7. Do not pick any scabs or dry areas that may form during the healing process, this may cause you to lose colour or damage your skin.
8. In some cases, after around 10/14 days your semi-permanent make up can seem like it has significantly faded. If this happens, please don't worry. A new layer of skin has grown over your SPMU and has temporarily dulled the colour. As your skin repairs itself over the next few weeks it will become darker again.
9. Your brows should fade around 20% - 40% (skin type dependent) as they heal. If you would like to tweak your colour on the top up, please just let us know.
10. Do not use pure Vaseline or petroleum jelly as it will clog the skin and hinder the healing process.
