SIM CONTROL

BUSINESS SIM MANAGEMENT PLATFORM

ANY SIM. ONE PLATFORM. FULL CONTROL.

SIMcontrol is the enterprise grade platform that makes business SIM connectivity simple, secure and predictable—across prepaid, contract, Private APN and IoT global roaming.

One dashboard. Real-time control. Zero bill shock.

Trusted by **2000+ BUSINESSES** For 15+ years	Over **1 000 000 SIMS** Managed	Multi **AWARD WINNING** Telco Partner

THE SMARTER WAY TO MANAGE BUSINESS SIMS—AT SCALE

Deploying connected devices should be about outcomes, not admin. SIMcontrol brings every SIM type and mobile network into a single view with real-time control, automation, and clear costs. Whether you're connecting 100's or 100 000's of SIMs, you get the visibility to act and the tools to scale—without lock-ins or surprises. What you'll notice immediately

- **Single source of truth** – All SIMs and networks in one account.

- **Real-time control** – Quotas, rules, and alerts you can act on instantly.

- **Automation** – Top-ups, caps and bulk actions that remove manual work.

- **Transparent costs** – Pooled data options and usage controls to eliminate bill shock.

- **Carrier-agnostic** – Work with multiple Tier-1 networks and keep your platform. Use your existing SIMs or order from us in bulk.

WHAT MAKES SIMCONTROL DIFFERENT?

BUILT TO GIVE YOU CONTROL — NOT LOCK YOU IN

Carrier-agnostic, multi-country
Manage local and roaming SIMs in one place. South Africa and broader Africa & global coverage in 180+ countries.

Proven at scale
Over 1 million SIMs under management for 2,000+ companies. Designed for high-volume operations and enterprise governance.

Security-first
Fixed/static IPs, custom firewalling, IMEI/device locking, and secure traffic options—plus private routing with Private APN SIMcontrol.

No long-term contracts
Scale up or down on your terms. Move between products without rebuilding your stack—keep the platform.

Tier-1 support
Expert technical connectivity support with fast turnaround from real people who know connected SIMs..

PRODUCTS AT A GLANCE

Pick the best SIM type for the job.
Whatever your deployment needs, we will help you choose the best SIM. Your team still works from the same SIMcontrol dashboard and APIs.
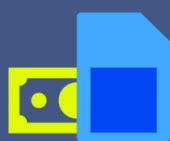

Prepaid SIMcontrol

Ultimate flexibility.

Automate recharges and set rules for usage, spend and destinations. Ideal for rapid rollouts and field teams.
Best for: variable usage, large fleets, and projects that need simple budget control.
Why it's better: automate the busywork and keep costs predictable.

Contract SIMcontrol

Data contracts—without the catch.
Centralise your business data contracts across networks. Get SIM-level visibility, spending caps, and proactive alerts and eliminate overuse.

Best for: stable monthly usage with predictability requirements.
Why it's better: clear reporting and controls that stop bill shock.

Private APN SIMcontrol

A new generation of managed Private APN. Run a private mobile network without the heavy lift. Get pooled data across networks, fixed/static IPs, custom firewalling, SIM-to-device locking, and secure routing—plus centralised control for rules, quotas and alerts.

Best for: high-security deployments, sensitive data, compliance-driven environments, cross-site/branch operations.

Why it's better: we manage your APN better —more visibility, faster changes, no contract lock-ins and less admin than legacy APN services.

IoT Roaming SIMcontrol

Global reach. Local-like control. Without the risk.

IoT roaming with smart network fallback and dual-network resilience—managed from one dashboard.

Best for: ccross-border logistics, global devices, local network redundancy.

Why it's better: one bill, one platform, multiple networks that "just work".

PLATFORM HIGHLIGHTS

Real-time visibility and full control, across every SIM
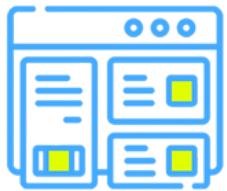

- **Unified dashboard** – See, search and action SIMs across networks, countries and products.
- **Quotas & rules** – Set per-SIM and bulk policies for spend, data caps, barred destinations, roaming rules and device locks.
- **Automation** – Top-ups, alerts and policy enforcement so ops teams spend less time in spreadsheets.
- **Pooled data options** – Share data across SIMs and networks on eligible products to reduce waste.
- **Bulk actions** – Provision, bar/unbar, and update rules at fleet scale.
- **APIs** – Provision, monitor and report programmatically; push events into your own systems.
- **Detailed reporting** – Session-level logs, cost tracking and exportable usage history.
- **Role-based access** – Scoped permissions with audit logs for enterprise governance.

SECURITY & NETWORKING

Private APN & fixed/static IPs
- Keep device traffic off the public internet with policy-based routing and secure access options.

Custom firewalling
- Allow/deny lists, destination controls and application policies.

Device/SIM bindings
- IMEI/SIM locking and device-specific controls to reduce fraud and misuse.

Data protection
- Encryption in transit, least-privilege access internally, and auditable change history.

Resilience
- Dual-/multi-network support, smart roaming and proactive monitoring to keep devices online.

WHERE SIMCONTROL FITS

Industry deployments we run everyday

TRUCKING & LOGISTICS

COURIER & DISTRIBUTION

POS, FINTECH & RETAIL

SECURITY & CCTV

FACTORY AUTOMATION

TEMPERATURE MONITORING

UTILIES, ENERGY & SMART METERS

SMART AGRICULTURE

EV CHARGING

Private APN SIMcontrol
We manage your Private APN better

Legacy APNs can be opaque and slow to change. Private APN SIMcontrol gives you the security and routing you need—with the day-to-day control your teams expect.

What you get

- Managed APN-as-a-Service – We operate and monitor it; you control policies and rules.
- Custom networking – Fixed/static IPs, device locks, firewall policies and destination controls.
- Pooled data across networks – Optimise spend while retaining resilience.
- Centralised rules & alerts – Block/allow lists, escalation paths and real-time notifications.
- API access – Automate provisioning, policy changes and reporting.

Why it matters

Sensitive data stays private, devices are locked to approved behaviours, and your operations team can act in real time—without waiting on change tickets.
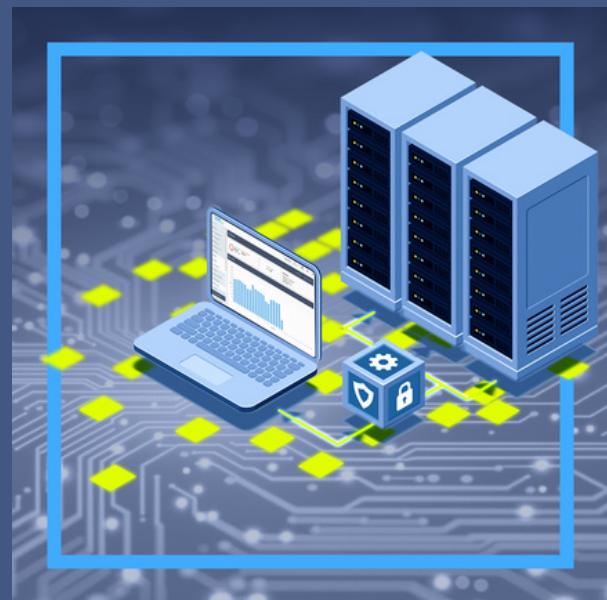

FAST TO START. EASY TO SCALE.
Onboarding & migration

1

Consult & scope –
We map your use cases, security posture and data needs.

2

Pilot –
Try the platform with a handful of SIMs (bring your own, or order new)

3
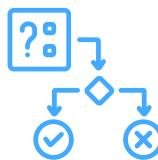

Configure rules –
Quotas, policies, firewalling and alerts aligned to your workflows.

4

Migrate in phases –
We keep outputs the same while you move estates in waves.

5

Go live –
Dashboards, users and APIs ready; support on standby.

Moving from DIY APN or legacy?

We'll help align rules, move SIMs in phases and match quotas/alerts—so teams get the same outputs with less effort. Migrate without the mayhem.

SUPPORT & SERVICE

Tier-1 technical support with fast turnaround

You'll speak to real people who run connected SIM deployments all day. From planning and rollout to troubleshooting, our team is geared for business-critical operations.

- Named contacts and quick response
- Help Centre and guided training for admins
- Enterprise escalation procedures

TRUST & PROOF

Proven with leading enterprises

A platform designed around operational reality: fewer tickets, faster changes, clean reporting.

What our customers say

"Rolled out in weeks, not months. Costs are predictable, and our teams actually use the dashboard."

"APN security without the admin. IMEI locks and rules saved us countless callouts."

"One view across contracts, prepaid and roaming stopped the bill shock immediately."
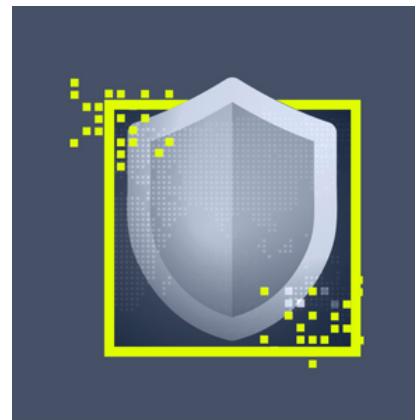

PRICING & TERMS

Predictable costs. No surprises.

We keep pricing SIMple: choose the network and product that fits (Prepaid, Contract, Private APN, IoT Roaming), then apply the rules and quotas you need. Where eligible, pooled data reduces waste; alerts and caps kill over-spend.

- No long-term lock-ins
- Scale up or down on demand
- One invoice across products and networks

Ask for a quote or start a free trial—whatever gets you moving fastest.
