BlueCloud | Embedded Teams

Move Your Backlog Forward *Without Waiting To Hire.*

Your team knows what needs to get done. But hiring takes months, specialized skills are hard to find, and growing backlogs delay the initiatives that matter most.

BlueCloud embeds experienced Snowflake, data engineering and AI specialists directly into your team, from individual engineers to dedicated delivery pods. They bring proven engineering practices, reusable tools and advisory guidance to help you deliver more, faster, while maintaining control of priorities.

The Business Problems *We Solve*

Critical projects are waiting on the right people

Open roles and lengthy hiring cycles delay important data and AI initiatives.

The backlog keeps growing

Your internal team has more work than it can deliver with available capacity.

Specialized skills are needed, but not forever

Migration, Snowflake and AI initiatives require expertise that may not justify permanent hires.

Contractors deliver hours, but results are hard to see

Inconsistent standards and limited oversight make progress and quality difficult to assess.

Losing one engineer can derail a project

Progress stalls when a key person leaves mid-project and no one else can pick up the work.

Your team can't adopt new capabilities fast enough

Limited hands-on expertise slows adoption of Snowflake and AI tools that could accelerate delivery.

WHAT BECOMES POSSIBLE

- Faster delivery of business priorities
- Reduced hiring delays
- Consistent engineering quality
- Greater output from existing teams

What We *Deliver*

Embedded Snowflake, Data & AI Specialists

Experienced engineers work within your team's tools, processes and priorities, adding the skills and capacity needed to move critical work forward.

Dedicated Delivery Pods

Coordinated teams with delivery leadership take on defined backlogs, providing additional capacity with clear ownership, quality standards and visible progress.

AI-Accelerated Engineering & Advisory Guidance

Reusable accelerators, AI-assisted development and engineering reviews help teams deliver efficiently, while BlueCloud architects guide technical decisions and maintain quality.

SKILLS & DELIVERY CAPABILITIES

Snowflake Engineering · Data Pipelines · SQL Optimization · Data Migration · Cortex AI · Machine Learning · Code Review · AI-Assisted Development

Specialists Who *Work The Way Your Team Works*

How BlueCloud Delivers

Define
Identify the work and skills needed.
Agree on priority backlog items, required expertise, ownership and success measures.

Understand
Get productive in your environment.
Onboard engineers into your tools and processes. Review architecture and backlog priorities.

Design
Establish how we'll work together.
Agree on engineering standards, code reviews, responsibilities and progress reporting.

Deliver
Move the backlog forward.
Work alongside your team with reusable tools and quality reviews.

Prove & Evolve
Measure output and plan what's next.
Review delivery velocity, quality and priorities. Adjust capacity or define outcome-based projects.

What BlueCloud Brings To Your Team

AI-Accelerated Delivery
Reusable engineering tools and AI-assisted development help speed migration, SQL optimization and application development.

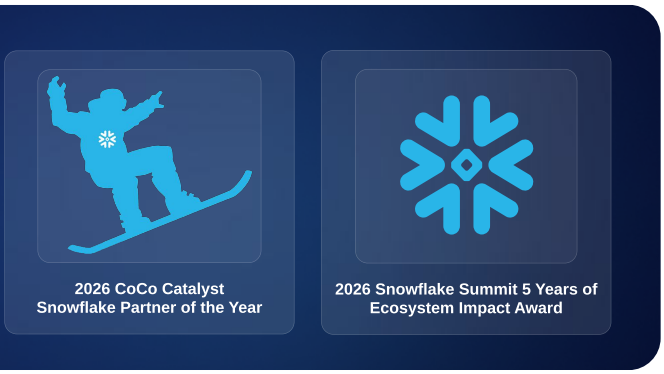

Quality Built Into Every Engagement
Code reviews, validation practices and shared standards help maintain consistency and reduce rework.

Advisory Expertise Beyond the Individual Engineer
BlueCloud architects provide ongoing technical guidance, helping connect delivery decisions to broader platform and business goals.

Built For *Visible Progress*

Your team sets the priorities. BlueCloud brings the engineering capacity, standards and oversight to deliver against them.

We measure progress through completed backlog work, delivery velocity and quality.
