Our Mission

We are leading the way to a sustainable, low-carbon future by bringing energy efficiency and clean energy projects to life.

Executive Message

Bob Hinkle
President and CEO

Dear Stakeholders,

As we publish our fifth annual Metrus Impact Report, we continue to believe that disclosing the climate-related impact of our portfolio enumerates and validates the financial solutions we offer, the partnerships we establish, and the investments that we make. Metrus has been financing sustainable and efficient energy infrastructure upgrades for 16 years. Investing in energy efficiency, often called the first fuel, continues to be one of the cheapest, fastest and most effective levers we can pull. As the market for Energy as a Service (EaaS) matures, the business case for a broader range of investments—expanding beyond energy efficiency to now include solar, storage, cooling & heating, and geothermal—is rapidly growing.

There is an important transition underway in the private and public sectors as energy planning is increasingly linked to financial and operational strategy. It is clear that climate risk is business risk: according to the Wall Street Journal, in 2024, natural disasters and severe weather cost the global economy \$417 billion last year, including \$154 billion for which insurers were on the hook.¹

Today's challenges include assessing and addressing the business impacts of extreme weather, complying with new healthy building mandates, procuring affordable, accessible, and reliable energy and meeting the growing demand for electrification, Business-as-usual just won't cut it. Investing in sustainable and efficient energy infrastructure upgrades is business-critical.

Additionally, the productivity, health, and safety benefits of implementing sustainable energy upgrades are well documented. These projects also lower energy and operational costs and deliver sizeable reductions in greenhouse gas (GHG) emissions, which can help organizations hit decarbonization goals and net zero targets and comply with regulations that limit or restrict the use of fossil fuels. Ultimately, customers have a myriad of reasons for investing in sustainable energy upgrades. And they are all good for business.

This Impact Report provides financial and environmental data from 2024 and quantifies the tangible impact of our work. For each project Metrus finances, we: (1) verify that it results in a net drop in scope 1 and scope 2 emissions, and (2) calculate a CarbonCount for each individual project to quantify the GHG reduction impact of each dollar that we invest. We are proud to continue to help scale climate-positive investments that improve the competitiveness and resiliency of our businesses, schools, and hospitals.

Thanks,

A handwritten signature in black ink that reads "Bob". The signature is written in a cursive, slightly stylized font.

About This Report

This report is structured to present the performance of the projects in our portfolio through three different lenses, followed by a summary of our commitment to climate action and responsible investing.

Our Portfolio

This section provides details on the number of project sites, types of energy efficiency measures, and the aggregate portfolio performance relative to expected energy savings and CO₂ reduction.

Our Impact

This section details the impact of our projects for customers in terms of lifetime and annual CO₂ reductions, annual energy and water savings, and highlights three project case studies.

Our Emissions

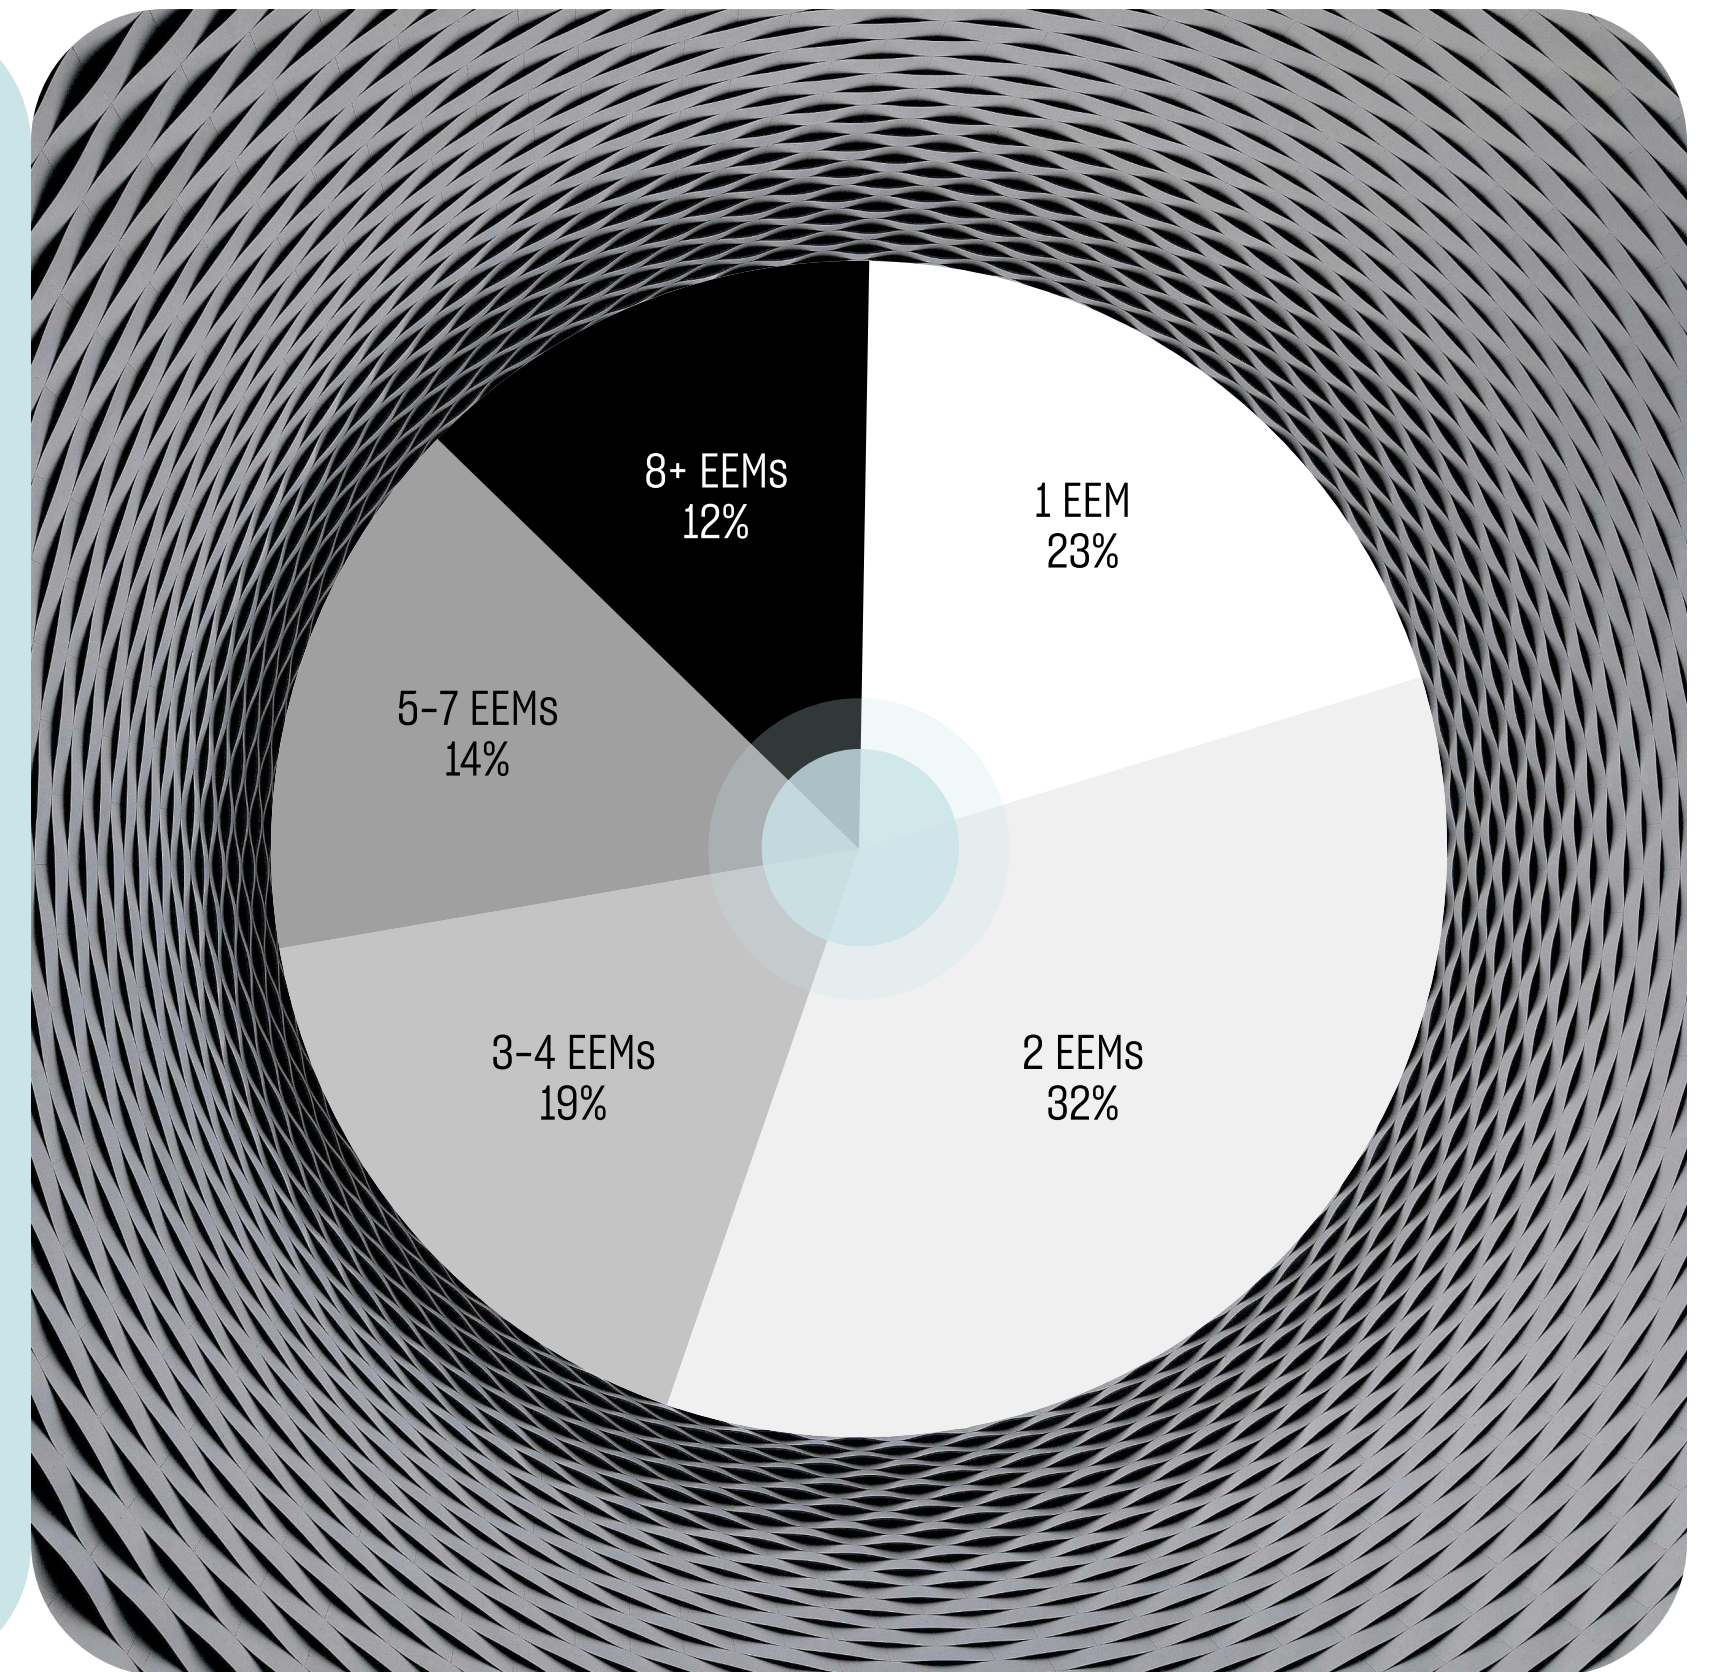

This section includes data on Metrus' own emissions from our business operations and the equipment that we finance and own on behalf of our customers.

Our Portfolio

Metrus has operational Sustainable Energy Services Agreement (SESA) projects in 34 states, encompassing more than 944 sites.¹ Our portfolio consists of over 30 different types of energy efficiency measures and technologies.

Energy Efficiency Measures (EEMs)

Nearly half of our projects feature three or more EEMs, which is consistent with our efforts to bundle upgrades with varying economic and technology profiles to achieve scale. Ninety-eight percent of our projects include lighting, reflecting both its crucial value to customers and its economic importance to unlocking deeper energy retrofits. SESA projects for private sector business, education, and healthcare customers are all represented in the 8+ category. The 23% of our projects with a single EEM are predominantly for warehouse and distribution center clients.

Measures financed include:

LED Lighting

- Interior
- Exterior
- Controls
- HVAC Reduction

BMS

- Retro-commissioning
- Replacement

Building Envelope

Compressed Air

- Controls
- Replacement

Domestic Hot Water

Water Conservation

Hot Water Heating

Electrical

- Power Factor Correction
- Transformer Replacement

Air Handling Units/Roof Top Units

- Controls
- VFDs

Replacement Chiller

- Controls
- Replacement
- Cooling Tower

Boiler

- Controls
- Replacement

Steam System

- Controls
- Trap Repair

Ventilation Controls

Appliance Replacements

EV Charging

Solar

Battery Storage

Annual Performance

Over the last decade, our realized savings have exceeded the expected savings (as projected in an initial energy audit) each year. On average, our portfolio performs at 101.6% of its expected savings.²

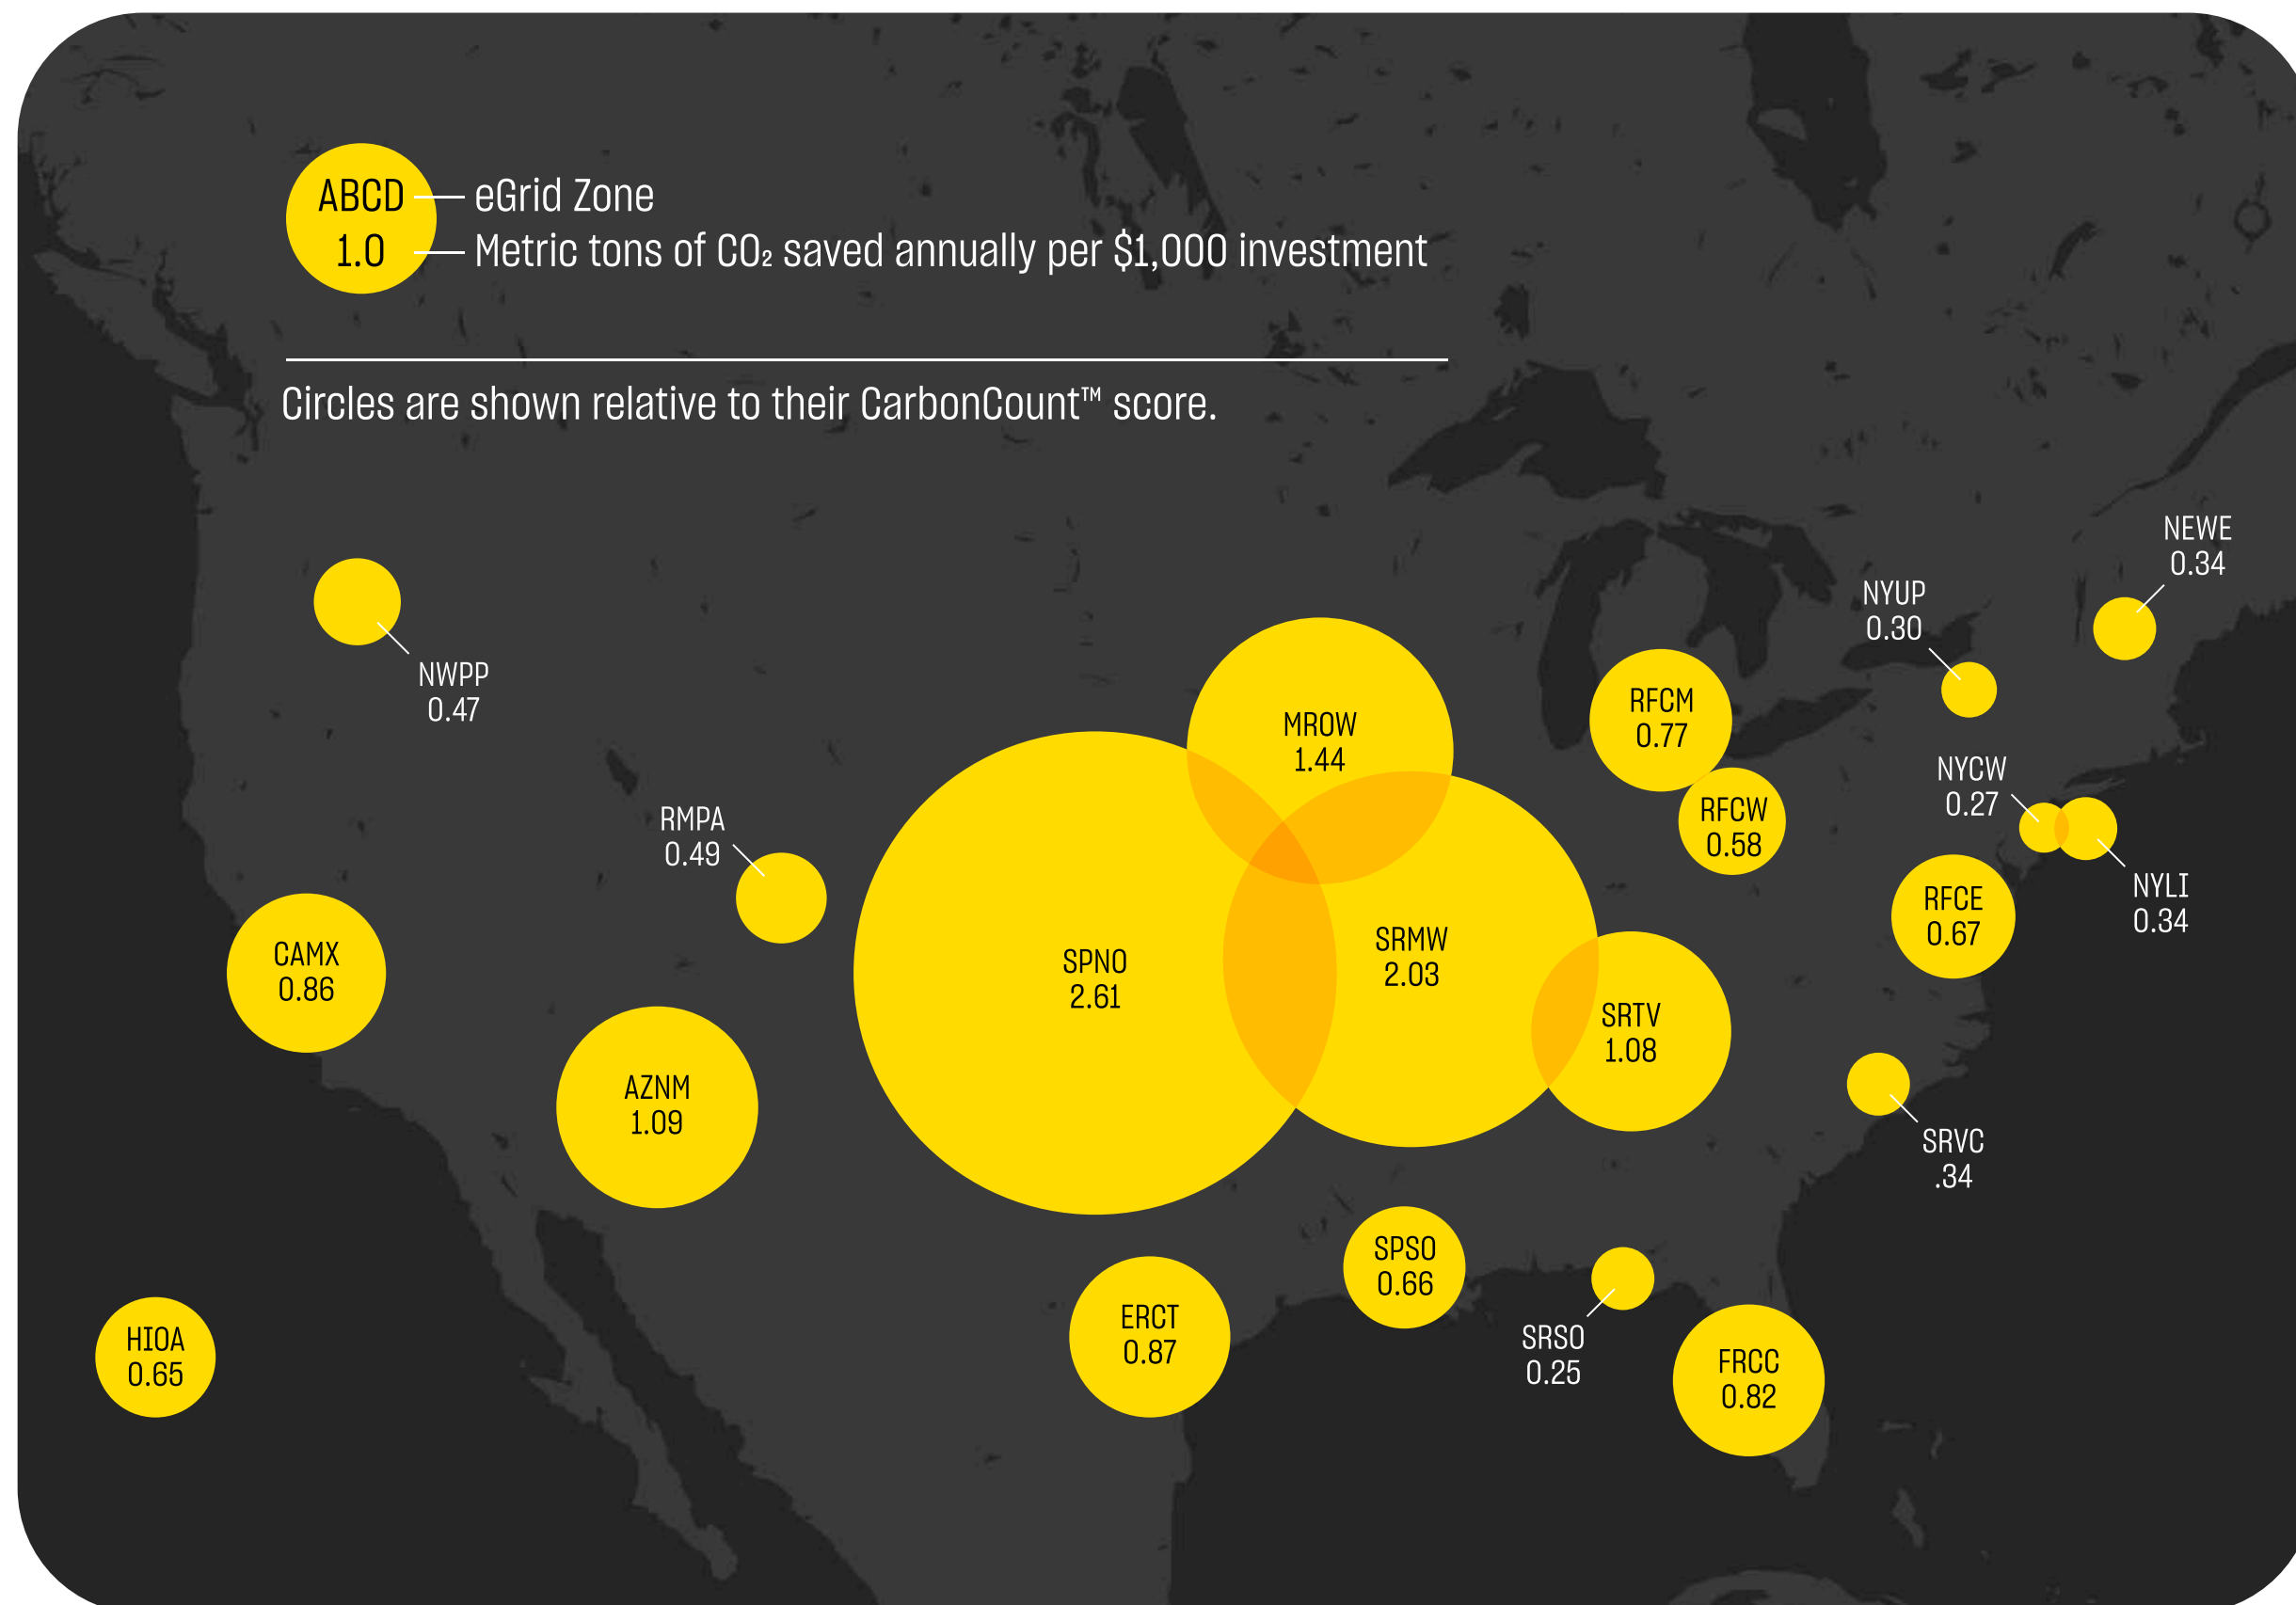

Aggregate Project Performance (%)

Year	Performance
2010	103.3%
2011	101.5%
2012	100.7%
2013	102.4%
2014	103.1%
2015	104.0%
2016	105.1%
2017	104.9%
2018	102.9%
2019	102.2%
2020	102.1%
2021	101.0%
2022	100.5%
2023	100.4%
2024	100.2%
2025	101.4%
Average	101.6%

CO₂ Savings per \$1,000 of Investment

Metrus measures the efficiency of its investment portfolio in reducing CO₂ (metric tons) by using CarbonCount™ as a scoring tool.³ Higher ratios mean greater carbon reduction per \$1,000 of investment.⁴ The data below represents the average scoring for Metrus projects located within 21 different regional eGrid zones.⁵ Our investments in the SPNO and SRMW zones have the highest CO₂ efficiency ratings due in large part to the higher carbon content in the midwestern power grid.

eGrid	Region	CarbonCount™
SPNO	SPP North	2.61
SRMW	SERC Midwest	2.03
MROW	MRO West	1.44
AZNM	WECC Southwest	1.09
SRTV	SERC Tennessee Valley	1.08
ERCT	ERCOT All	0.87
CAMX	WECC California	0.86
FRCC	FRCC All	0.82
RFCM	RFC Michigan	0.77
RFCE	RFC East	0.67
SPSO	SPP South	0.66
HIOA	HICC Oahu	0.65
RFCW	RFC West	0.58
RMPA	WECC Rockies	0.49
NWPP	WECC Northwest	0.47
SRVC	Virginia/Carolina	0.34
NYLI	NPCC Long Island	0.34
NEWE	NPCC New England	0.34
NYUP	NPCC Upstate New York	0.30
NYCW	NPCC NYC/Westchester	0.27
SRSO	SERC South	0.25

Our Impact

Environmental performance is interwoven into each of our projects. We prepare annual reports that detail project-level CO₂ savings broken out by scope 1 and scope 2 emissions to facilitate customer reporting under SBTi.⁶

This is also our third year of reporting on Metrus' annual reduction of sulfur oxides (SO_x) and nitrogen oxides (NO_x), atmospheric pollutants caused by burning fossil fuels.

Lifetime CO₂ Savings Across Our Portfolio

That's the equivalent of 28,447 cars being taken off our roads each year.⁸

■ = 10 cars

819,210

total metric tons of CO₂ saved⁷

2025: Annual CO₂ Savings

40,230⁹
annual metric tons of CO₂ saved

Scope 1 emissions saved
Direct emissions that occur at an organization's location (e.g., natural gas-fired furnaces, oil-fired boilers, etc.)

1,807
annual metric tons of CO₂ saved

Scope 2 emissions saved
Indirect emissions that are generated elsewhere in service to an organization (purchased or acquired electricity, steam, etc.)

38,423
annual metric tons of CO₂ saved

2025: SO_x and NO_x

In addition to reducing greenhouse gases, our efforts to accelerate the transition to a sustainable, low-carbon future directly reduce atmospheric pollutants such as sulfur dioxide (SO₂) and nitrous oxides (NO_x). In 2025, Metrus reduced SO₂ emissions by 18 metric tons and NO_x emissions by 27 metric tons. These reductions are helping to achieve the levels set forth in the EPA's National Ambient Air Quality Standards (NAAQS).

27
metric tons NO_x

18
metric tons SO_x

2025: Total Annual Energy Savings

Our projects include a wide range of energy efficiency improvements that generate both electric and thermal energy savings.¹⁰

In 2025, our portfolio saved a total of 428,035 MMBtu of energy. That's equivalent to 73,799 barrels of oil.¹¹

117,756,134
kWh of electricity saved

262,506
therms of natural gas saved

2025: Total Water Savings

According to the EPA, office buildings, hospitals, hotels and schools, among other commercial and institutional facilities, use 17% of the public water supply, making the sector the 2nd largest consumer in the country.¹²

Metrus has projects with water efficiency measures across private sector business, higher education, and healthcare customers. According to the EPA, each American uses an average of 82 gallons of water per day at home. So, the 77,434,253-gallon reduction in water consumption is equivalent to the water used by 2,587 Americans for an entire year.

77,434,253
gallons of water saved

2,587
Americans' water usage for 1 year

Case Study

University of Northwestern Ohio

Education

Total Metrus investment
\$3.9 million

CarbonCount™
0.33

Faced with a growing list of needed upgrades to its campus facilities, UNOH sought a way to finance the improvements without tapping into its CapEx budget, diverting funds from its educational mission, or pushing those costs onto students.

Metrus' Sustainable Energy Services Agreement (SESA) checked all the boxes. With no upfront cost to UNOH, the Metrus team installed LED lighting across the 210-acre campus, replaced 12 rooftop HVAC units at its athletic center, and implemented water conservation systems. On top of saving energy and water, the project will reduce operational costs, simplify facility maintenance, and enhance the comfort of students and staff.

Following the successful implementation of the first tranche, UNOH expanded their Sustainable Energy as a Service program with Metrus. Metrus financed an additional \$800k to upgrade the building management systems at 3 sites, the lighting systems at 5 sites, and the building envelope at 17 sites.

Case Study

Amazon

Warehousing & Distribution

Total Metrus investment
\$74.28 million

CarbonCount™
0.87

With facilities in every corner of the United States, Amazon faced a complex challenge: how to design and implement energy efficiency upgrades across a sprawling enterprise where utility rates and landlord requirements varied widely. Adding to the challenge, the company wanted the project completed quickly – with little to no capital outlay.

Under this Sustainable Energy as a Service program, Metrus has financed over \$74 million of projects at 56 sites across the United States for Amazon. There have been eight project tranches in two years, with more projects underway. The rapid rollout across a far-flung operation provides a powerful demonstration of the scalability and flexibility of Metrus' SESA.

The project will reduce total electricity use for lighting at these 56 sites by 71%, thereby eliminating 66,495 tons of annual CO₂ emissions—the equivalent of taking 14,461 cars off the road annually.

Case Study

Daimler Trucks North America

Vehicle Manufacturing

▶ Total Metrus investment
\$6.56 million

▶ CarbonCount™
0.41

As part of its mission to become carbon neutral in its vehicle production by 2025, Daimler Trucks North America (DTNA) sought to make significant energy efficiency upgrades at its Cleveland, NC manufacturing plant. It required a provider that was both flexible and scalable in terms of financing, technologies, and program scope.

Metrus was the perfect fit. Working with Centrica as its ESCO partner, Metrus enabled DTNA to implement upgrades across seven buildings, generating roughly \$1 million in average annual savings over a 12-year SESA term. The Metrus SESA allows DTNA to expand the program scope as its needs evolve; deeper savings are anticipated as subsequent projects are rolled out nationwide.

Our Emissions

A holistic look at our overall carbon impact, including Metrus' own emissions.

While we maintain a low energy profile within our own built environment, we take responsibility for the impact of scope 3 emissions for assets that we own and install on behalf of our customers. Our goal with this report is to provide complete transparency into the energy savings and environmental impact of our business as well as our project investments.

Metrus' Scope 1 Emissions

We don't generate any direct emissions from fuel combustion.

0
metric tons

Metrus' Scope 2 Emissions

For our office space, we purchase utilities that produce emissions.

18
metric tons

Metrus' Scope 3 Emissions/Travel

For employee travel and commuting, we generate a nominal amount of emissions.

141
metric tons

Metrus' Scope 3 Emissions/Assets

Our project assets consume energy and produce CO₂, albeit more minimally than the equipment they replaced.

16,486
metric tons

Total

16,644
metric tons

Our Net CO₂ Savings

40,230
metric tons of CO₂ saved

- 40,230
metric tons of CO₂ produced

23,586
net metric tons saved

Our Commitment

Metrus is committed to accelerating and scaling climate action by financing, owning, and operating sustainable energy projects.

Seventeen years ago, we introduced a groundbreaking finance solution that enables companies to decarbonize and reduce their environmental impact with no upfront cost. We remain steadfast in our mission to drive climate action by financing, owning and operating sustainable energy infrastructure upgrades and accelerating the transition to a sustainable, low-carbon energy future. We're living at a pivotal time when investment, innovation, and decisive action can make a real difference and we're fully committed to driving progress and being accountable.

Our Partnerships

\$175 million

The Department of Energy's Better Buildings Challenge is a partnership of businesses, manufacturers, cities, states, universities, and school districts committing to improve the energy efficiency of their buildings by at least 20% over 10 years. Metrus was one of the first financial allies to join this program. After exceeding our first two commitment goals, we've recently reupped our target to \$300 million.

In 2023, Metrus joined Mission Efficiency in their pursuit to accelerate the transition towards energy-efficient economies worldwide. Mission Efficiency is a collective of actions, commitments and goals from a coalition of governments, organizations, and initiatives coming together to drive progress on energy efficiency, and Metrus is providing strategic support on key issues in the US.

The Alliance promotes energy efficiency to achieve a healthier economy, a cleaner environment, and greater energy security and is a bipartisan, nonprofit coalition of business, government, environmental, and consumer leaders advocating to advance federal energy efficiency policy.

AMERICA IS ALL IN

\$200 million

The America Is All In initiative (formerly We Are Still In) is a diverse coalition of U.S. leaders who support halving U.S. emissions by 2030 and reaching net zero emissions by 2050. As part of this ongoing initiative, Metrus increased its financing commitment from \$100 million of sustainable energy projects to \$200 million and is now 43% of the way towards its new target.

The Cool Coalition is a partnership of proactive governments, businesses, and civil society organizations that aims to accelerate progress toward efficient and climate-friendly cooling. Metrus joined the coalition in 2023 in order to promote the adoption of environmentally friendly cooling technologies and to facilitate equipment upgrades through its Energy as a Service financing solution. As part of the first-ever Global Cooling Pledge announced at COP28, Metrus has committed \$100 million in sustainable cooling projects.

In 2021, Metrus became a signatory to the internationally-recognized Principles for Responsible Investment (PRI), publicly demonstrating our commitment to responsible investing, at a global level. We join an international cadre of investors and asset owners who believe that an economically efficient, sustainable global financial system is a necessity for long-term value creation.

The Business Council for Sustainable Energy (BCSE) is a coalition of companies and trade associations that deploy clean energy and decarbonization solutions, with a sector focus on energy efficiency, natural gas, and renewable energy, in addition to energy storage, sustainable transportation, and more.

Metrus Energy has joined a global coalition of more than 170 organizations in signing the first-ever Global Pledge for Healthy Indoor Air. The pledge, launched at a United Nations Side Event in September, is the first international effort to formally recognize clean indoor air as a basic human right essential to health and well-being.

Diversity and Inclusion

Metrus is dedicated to creating a diverse and inclusive work environment. We respect and learn from different viewpoints and lived experiences. We welcome, support, and benefit from the perspectives of people who differ in race, culture, ethnicity, gender identity, physical ability, religion, and sexual orientation. We believe that having diverse employees, business partners, and community relationships is vital to delivering our services and achieving our mission of bringing energy efficiency and clean energy projects to life. At Metrus, diversity of thought and experience is respected and viewed as essential to excellence.
