CARGO MANAGEMENT

Continual insights into trailer status

Inefficient trailer utilization, dwell time mismanagement, and loading inefficiencies can significantly impact operational performance and costs.

Leverage volumetric data to transform how you optimize trailer space. By analyzing the interior dimensions and available capacity, you can ensure your trailers are loaded to their fullest potential on every trip.

Manage dwell and detention times with data on arrival, load/unload activity, and departure for data-driven billing for detention, while more efficiently schedule pickups to keep your fleet moving efficiently.

Detect issues like cargo theft or unsafe loading practices that can cause cargo shifts. Proactively addressing these ensures cargo safety and operational efficiency.

With verifiable images and actionable data, gain the confidence to make informed data-driven decisions.

INCREASED VISIBILITY OF CARGO

Gain a full view of trailer status, utilization and trailer availability to optimize utilization and safety

VISIBILITY ON THE RIGHT EVENTS

Get visibility when it matters - set triggers to capture events based on motion, door status, geofencing time or on-demand

FLEXIBLE INSTALLATION OPTIONS

Mount the camera where you need it to reduce blocked images for full visibility

IoT: Internet of Trailers™

Philips Connect provides smart-trailer technology such as GPS tracking, cameras, and a variety of sensors including brakes, lights, and tires that keep the roads safe while revolutionizing the transportation industry as we know it.

CAMERA SENSORS

CargoV™

Cargo detection for sheet and post and composite nose trailers

- Can be installed on any trailer type
- IP67 end-to-end
- 53-foot detection
- Know when an asset is available for its next load
- Track and know when trailers are in detention status

CargoVision™

Monitor the interior status of your asset

- Images captured on demand, photos available within 5 minutes in Connect1
- Use Connect1 to automatically take photos driven by motion, door events, geofence entry or exit, etc.
- Easy proof of detention
- A full view of the trailer ensures no freight is against the door before opening

CONNECT

Connect1™ is our user interface designed for optimal fleet management. Its driving purpose is to provide status updates, alerts, and to decode errors of each asset's sensor's current behavior.

- Advanced notifications
- Geofencing and sub-geofencing
- Visibility to asset list (installed/ uninstalled)
- Ability to sub-organize your fleet to give different groups or users access
 - Perfect for leasing
- Set up maintenance schedules

- Reporting on demand
- Ability to write custom queries and apply them to the map, reporting, maintenance, and notifications
- Fleet analytics/ dashboards
- Highly customizable – manage your fleet your way!
