

DriverAssist™

Empower your drivers with smart trailer technology

DriverAssist brings vital smart trailer sensor intelligence *directly into the cab*, to enhance productivity, safety, and confidence for drivers. Bring the insights and alerts most critical to your organization to right to driver with real-time updates to improve trailer maintenance, operational efficiency and security.

The integration revolutionizes the driver experience, providing key trailer data such as *real-time tractor trailer pairing validation*, tire pressure monitoring, door - and many more important sensors - ensuring drivers are always aware of the status of their load and the health of their trailers.

PREVENT MISPULLS

Tractor Trailer Pairing quickly alert drivers and dispatchers if tractors are pulling the wrong trailers

ENHANCED DRIVER SAFETY

Send critical alerts directly into the cab so drivers can take immediate action on tire pressure status

SEAMLESS INTEGRATION

Easily works with any ELD platforms. Richer integrations available with ELD providers like Platform Science and others

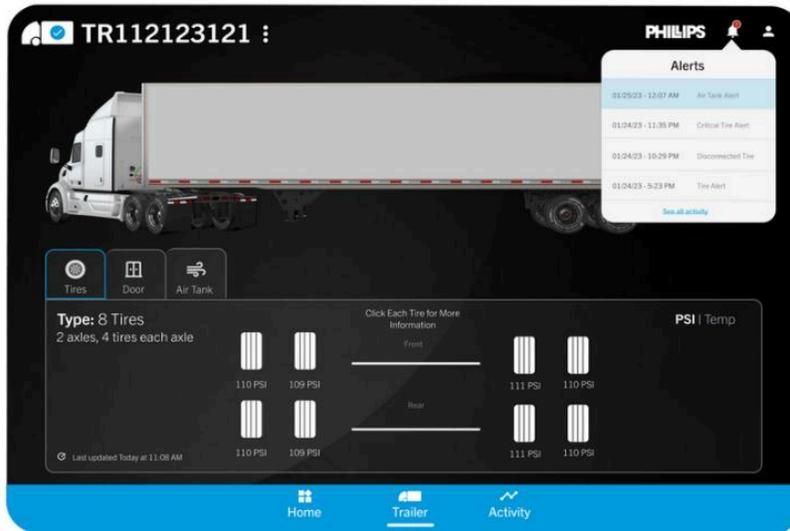

Smart Trailer

Phillips Connect provides smart trailer technology to provide full visibility into trailer status to keep the roads safe and empower drivers to take on the road with confidence.

Designed for the Driver

DriverAssist brings vital smart trailer insights directly into the cab, empowering drivers with the information they need to seize the road. Designed for the driver - DriverAssist features easy trailer status visualization and limited touches - so that drivers can take on the road with confidence.

Enable these powerful add-ons to bring critical insights to the driver:

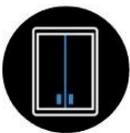

Tractor Trailer Pairing (T/T Pair™)

- Empower drivers with the confidence that they are connecting to the correct trailer, eliminating costly mistakes and ensuring smooth operations.
- Instantly detect and alert both drivers and the back office to unauthorized trailer connections, enabling immediate action to prevent misuse or theft.
- Leveraging Phillips T/T Pair 7-way socket and inline ABS harness, establishes a powerful communication link, using a PLC transceiver housed within the socket itself.

Tire Pressure Monitoring (TPMS)✓

- Detect tire inflation problems whether they are on the road or waiting for their next trip.
- Provide critical alerts to your drivers for improved safety and to reduce unplanned downtime.
- Easily see which tires are healthy, in warning or critical status.

Door Monitoring (Door)✓

- Monitor the status of your trailer and be alerted of any "door open" events.
- Configurable alerts can be set to send notifications if a door is unlocked or opened outside of an authorized geofence.

DriverAssist app will be available on any Android mobile device
& seamlessly integrate with Platform Science.
*(*IOS and additional partner integrations coming soon)*
