Options are complex products and are not suitable for all investors. You must read and understand the Characteristics and Risks of Standardized Options before buying or selling exchange-traded options. The risk of loss is substantial, and you may lose more than the principal invested. Options are sensitive to considerable risks including

counterparty, early assignment, and expiration risks, among others. The degree of risk will vary depending on the strategy. You should consider your experience, investment objectives, and understanding of the characteristics and risks involved before you begin trading options.

Investors are advised to thoroughly evaluate the investment objectives, risks, charges, and expenses associated with Exchange Traded Funds (ETFs) prior to making any investment decisions. For a prospectus that includes this information, please reach out to us at [support@architect.co](mailto:support@architect.co). It is essential to read the prospectus carefully. ETFs are exposed to market risk, tracking error, and liquidity risk, and may also face concentration risk. Furthermore, ETFs are subject to management fees and other associated expenses. Investment returns may vary and are influenced by market volatility, which means that the value of an investor's shares, upon redemption or sale, may be greater or less than the initial investment. These products are designed for sophisticated investors who possess a comprehensive understanding of the associated risks.
