with EN 1090-1 (based on ISO 9001)

About Us

We do ship repair, maintenance and modification work at our over 600 ton tug yard in Pargas. Pargas Shipyard, a part of the Riverco Group, was founded in 1974 and is certified according to ISO-9001.

We dock all types of vessels, including general cargo vessels, tankers, tugs, barges, research vessels and passenger ships. We also repair Finnish coast guard ships, transport ships and navy ships.

We dock a dozen ships a year and offer our customers all essential services related to ship repair, maintenance and modification work. We have a fully equipped dry dock, cranes, piers, warehouses and workshops.

Our Shipyard Facilities

Pargas Shipyard has a harbor that is perfectly suited for ships.

There are also good road connections to the area. Loading and unloading work can be done without weight restrictions from the sturdy shore platform.

Cargo transfer and unloading are very successful from the quay to the next mode of transport. We also offer a storage option.

The lifting capacity of the towing dock is 600 t and crane capacity 60 t

Renewal of sacrificial anodes

Loading from private port and sea transport

Piping and electrical installations

Glass wall structures

Peace of mind

Our mission

With our extensive experience in maintenance and repair services, we ensure your vessel remains reliable and operational. This allows you to focus on what matters most, without worrying about its performance between dockings.

If you need – one of our special areas of expertise is to complete even major conversion and refurbishment works on board during the normal traffic, or during even the shortest docking periods.

Riverco group works with steel and aluminium to build small and medium-sized ships and boats, such as tugs, work boats and yachts with luxurious interiors, in our own shipyard.

We can handle your vessel and project, no matter what size; from a few hours' work to projects involving tens of thousands of hours.

Images

Over the years, we have successfully repaired, maintained, and built hundreds of vessels at the Parainen Shipyard, gaining extensive experience across a wide range of marine projects.
