The Zudello differentiators, according to Thrive Technologies

- Superior document extraction
- Integrations across a broad range of ERPs and can even work as a stand-alone solution
- Great user interface
- High degree of customisation
- Great professionalism and customer service
- FinOps automation product is ideal for the construction industry

Thrive Technologies

Thrive Technologies is a specialist software consultancy focused on Australia's construction industry. With unmatched sector knowledge, they help firms improve productivity through tailored digital solutions.

Thrive works with builders, contractors, and developers to modernise finance systems and boost control. Their partnership with Zudello delivers FinOps automation designed for the construction industry's unique complexity.

Construction Industry Needs

Despite growing demand, productivity in construction has barely improved over two decades. Many firms still rely on manual, disconnected finance systems that create delays and inaccuracies.

Financial visibility is often slow, with project costs and profits unclear until weeks after completion. Thrive sought a platform that would enable clients to monitor performance in real time and take action sooner.

Zudello Automation Platform

Zudello's platform uses AI and machine learning to simplify finance tasks like procurement and Accounts Payable. The no-code interface lets users build custom workflows easily. The Platform integrates seamlessly with ERP systems, providing real-time data updates while ensuring secure, compliant operations with full audit trails.

Zudello Solution

Zudello's Budget Management tool provides real-time oversight of what's been spent, what's committed, and what remains – all in one place. Project teams can access this information on the move and act fast when needed. "Zudello helps teams know where they stand – every day," says Neville Woller. By making accurate job data instantly available, Zudello turns retrospective analysis into daily decision-making power.

Beyond budget tracking, Zudello automates approvals and integrates data across disparate systems. Construction firms save time and reduce error rates, while gaining a consistent, accurate view of financial performance – job by job. The platform also scales with business growth, supporting long-term efficiency across increasingly complex project portfolios.

Benefits

Zudello gives construction companies the financial clarity they've been missing. Teams no longer wait weeks for insights – they know where each project stands in real time, helping them catch issues early and stay on budget. This level of transparency improves confidence at every level, from project managers to executive leadership.

The efficiency gains are just as powerful. Automation replaces manual processes, cutting labour hours and reducing risk. By streamlining workflows and improving data consistency, Zudello boosts margins and supports smarter decision-making across construction businesses. It also reduces reliance on siloed legacy systems, unifying project data into a single source of truth that ensures better, informed decision making. Ultimately the transparency Zudello brings leads to business confidence.

“It's very common for a construction company not to know whether they made money on a job until eight weeks after it closed. They needed a platform to give clients daily visibility and control.”
