ADLIB

Executive Guide to
AI Accuracy & Trust

Week 1-2

INVENTORY AND ACCEPTANCE

- **Inventory your top three document-heavy processes.** Most plants start with a mix of:
 - Digital twins (engineering drawings, change orders)
 - Predictive maintenance and quality (inspection/maintenance logs)
 - ESG and compliance (site reports, certifications)
- **Write explicit acceptance criteria.** Examples:
 - “100% of required metadata retained; PMI preserved; version aligned”
 - “≥98% field/table capture on golden sets”
 - “Document-to-system latency ≤ X minutes”
- **Name owners and consumers.** Who owns the documents? Who consumes the outputs? What will they do differently when the data is trustworthy?

34

Week 3-4

DATA CONTRACTS AND EXCEPTION PATH

- **Define data contracts per document class.**
 - What fields, structures, and formats must exist for drawings, SOPs, and logs? What counts as a failure?
- **Design the exception path.**
 - Confidence thresholds, reason codes, and a managed human-review queue. If something fails validation, where does it go? Who fixes it? How fast?

AI Accuracy & Trust

Week 5-8

PILOT

ONE LINE/SITE

- **Run the full pipeline on one high-value flow.**
 - Ingest → convert → extract → validate → assemble → deliver.
- **Instrument ruthlessly.**
 - Track validation pass rate, exceptions, latency, and downstream outcomes (audit prep time, deviations, twin accuracy).
- **Socialize early wins.**
 - Show a before/after on a single drawing set or SOP package. Make the improvement tangible.

912

Week 9-12

SCALE

AND CODIFY

- **Scale laterally.**
 - Expand to a second line or site.
- **Codify the operating model.**
 - Policies, training, dashboards, and SLAs.
- **Tie to board-level KPIs.**
 - Fewer deviations, faster audits, higher first-pass yield on document validation, and measurable improvements in twin accuracy or maintenance outcomes.

AS TRUSTED BY

7 out of Top 10 Pharma Manufacturers Leaders in Highly-Regulated Industries

Adlib deserves a 10 out of 10, as I view them as the strongest option available. -
Sr System Analyst, National Electricity Supplier

We found that pixel-perfect rendering was not such a simple requirement, and many of the tools we tested were not capable of faithfully converting specific content within our test files. - Director of Architecture & IS Risk, Leading P&C Insurer

Working with the likes of Adlib keeps us complaint. - Associate Director and Sr. Manager, Protocol & Report Content, Global Global CRO
