POWERTRON®

AUTOMATIC TRANSFER SWITCH

The POWERTRON Automatic Transfer Switch (ATS) ensures your critical loads are seamlessly transferred during a power outage. By continuously monitoring your business's power supply, the Powertron ATS detects interruptions or failures due to accidents or adverse weather and promptly switches to generator power. This keeps your essential machines, devices, and appliances running safely and efficiently.

The POWERTRON ATS features a robust NEMA 3R steel enclosure. Its user-friendly TruONE® HMI is password protected and provides access to a variety of features, including programmable set points, time delays, digital I/O, exercisers, switch status, event logging, and diagnostics.

UL 1008 LISTED

[Note: Photo of POWERTRON ATS depicts the SE version for Service Entrance]

				1200								е				

FEATURES

- · Comes standard as NEMA 3R enclosure, level 3 controller
- · UL Listed
- · User-friendly digital controller comes factory set with common trips and time delays
- · Easy to change parameters, test and has the option to switch to manual mode if needed

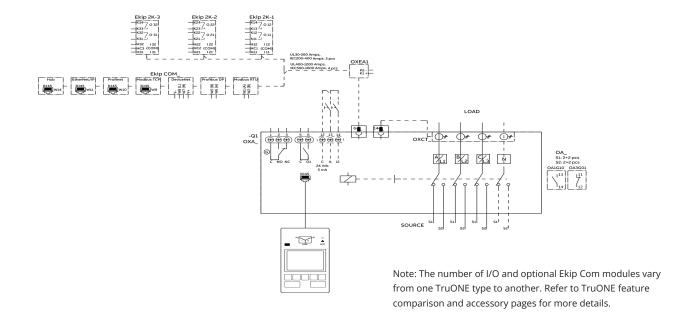

CONTROL AT YOUR FINGERTIPS

Once sources are connected, an innovative auto-configure function via the HMI sets electrical system parameters in seconds. Because of the innovative technology, no additional control wiring or troubleshooting is required on-site. And any programming changes can be done from the HMI with a few keystrokes, making commissioning quick and painless.

OVERVIEW 11

Features

Main features in the table below.

Ampere sizes available	III 60, 1200
Data di calta da	UL 60 - 1200
Rated voltage	200-480Vac
Rated frequency	50 / 60 Hz
Phase system	Single and Three
Number of poles	2, 3 and 4
Neutral configuration	
Switched	Yes
Product type	
Open transition (I-II)	Yes
Voltage and frequency settings	
Pick up Voltage Source 1	71-99%, 101-119%
Drop out Voltage Source 1 *	70-98%, 102-120%
Pick up Voltage Source 2	71-99%, 101-119%
Drop out Voltage Source 2 *	70-98%, 102-120%
Pick up Frequency Source 1	80.5-99.5%, 100.5-119.5%
Drop out Frequency Source 1	80-99%, 101-120%
Pick up Frequency Source 2	80.5-99.5%, 100.5-119. 5%
Drop out Frequency Source 2	80-99%, 101-120%
Time delay settings	
Override momentary Source 1 Outage, sec	0-60
Transfer from Source 1 to Source 2, sec	0-3600
Override momentary Source 2 Outage, sec	0-60
Transfer from Source 2 to Source 1, min	0-120
Generator stop delay, min	0-60
O . OFF. I.I.	0-300
Center-OFF delay, sec	
Pre-transfer delay S1 to S2, sec	0-300
	0-300
Pre-transfer delay S1 to S2, sec	
Pre-transfer delay S1 to S2, sec Post-transfer delay S1 to S2 , sec	0-300 0-300 0-300

^{*} Drop out voltage settings possible as low as 70% for 240V-480V systems.

Features

Main features in the table below.

1	
Controls	LCD + keys
LED indications for ATS, S1 and S2 status	Yes
Open transition - Standard digital inputs/outputs	1/1
Delayed transition - Standard digital inputs/outputs	2/1
Programmable digital inputs/outputs	Yes
Auto config (voltage, frequency, phase system)	Yes
Source priority	Source 1/2, No priority
Manual re-transfer	Yes
In-phase monitor (synchro check)	Yes
Genset exercising: on-load, off-load	Yes
In-built power meter module	No
Load shedding	Yes
Real time clock	Yes
Event log	Yes
Predictive maintenance	No
Voltage and current harmonics measuring	No
Field-mount accessories (Optional)	
Auxiliary contacts for position indication	Yes
Digital input/output modules	Yes
12-24 Vdc aux supply module for controller	Yes
Communication modules	Yes
Connectivity capability (Optional Modules)	
Modbus RTU (RS-485)	Yes
Modbus/TCP	Yes
Profibus DP	Yes
ProfiNet	Yes
DeviceNet	Yes
Ethernet IP	Yes
Monitoring via ABB Ability™: Energy and Asset Manager	Yes
For applications	
Mains - Mains	Yes
Mains - Generator (minimum size 20kVA)	Yes
UL short circuit withstand ratings	
Coordinated breaker WCR	Yes

Description of basic functionality

Operation of time delays and corresponding relay output signals

Example for SOURCE 1 Priority, SOURCE 2 = Generator

The automatic switching sequence can be summarized in the following steps:

- · An anomaly occurs on the SOURCE 1
- · Override momentary S1 outage delay
- · Generator start
- SOURCE 2 OK
- · Transfer from S1 to S2 delay
- · Pre-transfer signal on
- · Load shed signal on
- Pre-transfer S1 to S2 delay
- · Load shed delay
- Transfer switch (SOURCE 1) to the position O
- · Center-off delay
 - (only with Delayed transition I O II type)
- · Transfer switch (SOURCE 2) to the position II
- · Post-transfer S1 to S2 delay
- · Pre-transfer signal off

The re-transfer sequence can be summarized in the following steps:

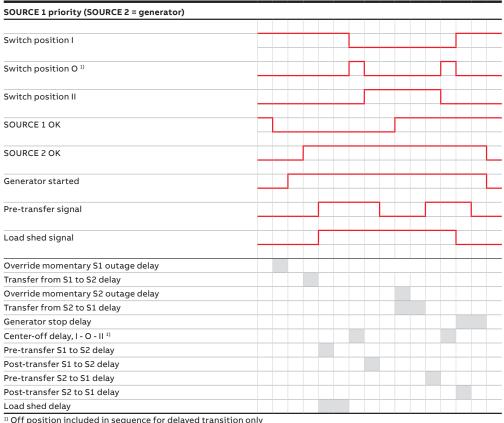

- The SOURCE 1 is restored
- Transfer from S2 to S1 delay
- · Pre-transfer signal on
- · Pre-transfer S2 to S1 delay
- Transfer switch (SOURCE 2) to the position O
- · Center-off delay (only with Delayed transition I - O - II type)
- Transfer switch (SOURCE 1) to the position I
- · Load shed signal off
- · Generator stop delay
- · Post-transfer S2 to S1 delay
- · Pre-transfer signal off
- Generator stop
- · SOURCE 2 off

from primary to backup power

Video: Transfer from backup to primary source after power is restored

¹⁾ Off position included in sequence for delayed transition only
