

SoloProtect® Mobile

Quickly transform a phone into a valuable and efficient personal safety tool.

The mobile app is an easy option for organisations wanting to bolster their personal safety measures and demonstrate duty of care to employees, without the cost, administration, and training implications of deploying dedicated devices.

Available on Android (12+, excluding Android Go) and Apple (16.2+) operating systems.

Benefits

User friendly design that's easy to navigate, even in high pressure situations.

Quick to implement - be up and running within a few minutes.

A cost-effective solution - zero device costs, sim contract fees or shipping costs.

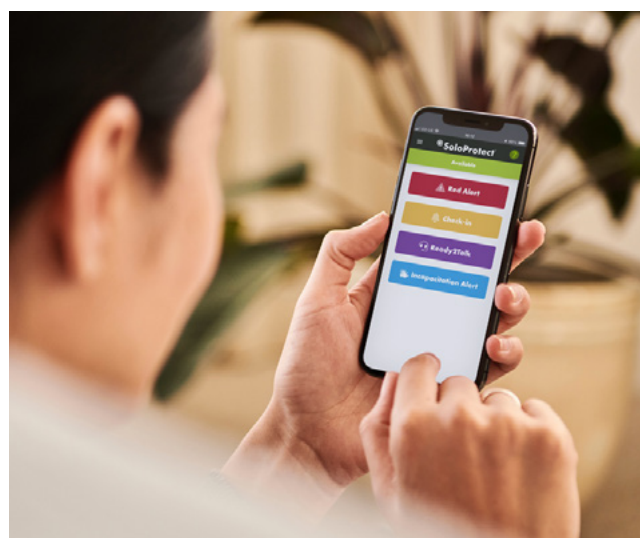

Minimal training time required.

Similar range of features to our dedicated safety devices, plus Risk Messaging.

Encourage use outside of working hours to support your Employee Value Proposition.

SoloProtect® Button

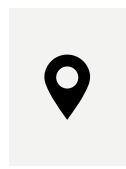

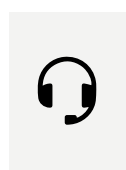

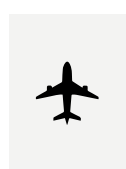

NEW!

Our Bluetooth Button is an optional add-on for enhanced usability and discretion.

SoloProtect[®] Mobile

Features

	Red Alert 24/7 emergency alarm, designed to get help to your workers when they need it most.		Incapacitation Alert The feature provides a quick emergency response if the device detects incapacitation due to a slip, trip or fall.
	Ready2Talk[®] A non-emergency service, designed to support workers when there's a clear safety risk.		Check-In Voice messages left by the app user containing valuable information about their location and activity.
	Latest Location Monitor the location of workers to track progress, facilitate redeployment decisions, and identify efficiencies.		Risk Messaging: Send mass notifications to workers about risks or live incidents that could affect their safety.
	24/7 Monitoring Provided by SoloProtect's industry leading Alarm Receiving Centre which is accredited to BS 8484 and EN 50518.		Privacy Toggle Puts location sharing in the hands of the user.
	Working Status Allows workers to specify whether they're available, off shift, or on annual leave, for example.		Discreet Activation Activate a Red Alert by pressing the power button four times (Android) or tapping on the back of the phone three times (iOS).

SoloProtect[®] Insights

All our customers get access to [SoloProtect Insights](#), our online platform for the implementation, administration, and ongoing management of your solution.

Easily manage user onboarding, app allocation, training, and escalation contacts; access alarm evidence, user location data, and Working Status information; send Risk Messages to individuals or groups; and generate a wide range of usage reports for administrators, managers, and other stakeholders.
