

Margins Are Shrinking. VPP Revenue is Growing.

With ITC rollbacks, tariffs, and a turbulent policy horizon, traditional hardware-based business models are under pressure. Winning now means delivering recurring grid revenue—without adding complexity or cost to your core product.

Introducing DividendVPP™

A fully-integrated, white-labeled
VPP stack built for OEMs.

NO REDESIGN.

NO NEW DEVELOPMENT.

NO DISRUPTION TO YOUR
INSTALLER NETWORK.

Just a new layer of recurring revenue
baked into every deployed system.

Why It Matters to OEMs

Margins are compressing.
Hardware alone won't carry you.

Installers need differentiated value.
Grid-integrated systems sell
faster and more profitably.

You need a new revenue layer.
DividendVPP turns every system into
a revenue-generating grid asset.

What Makes DividendVPP Different

Most 'VPP-ready' solutions stop at
API access and remain a cost center.
We go full-stack — delivering a revenue engine.

Edge site control
(plug-and-play or embedded)

**Multi-program value stack
optimization across demand
response, TOU, RA, and wholesale**

**Real-time forecasting
and event readiness**

**Settlement, compliance,
and PMA management**

**Customizable payout waterfall
to partners, installers, or
end customers**

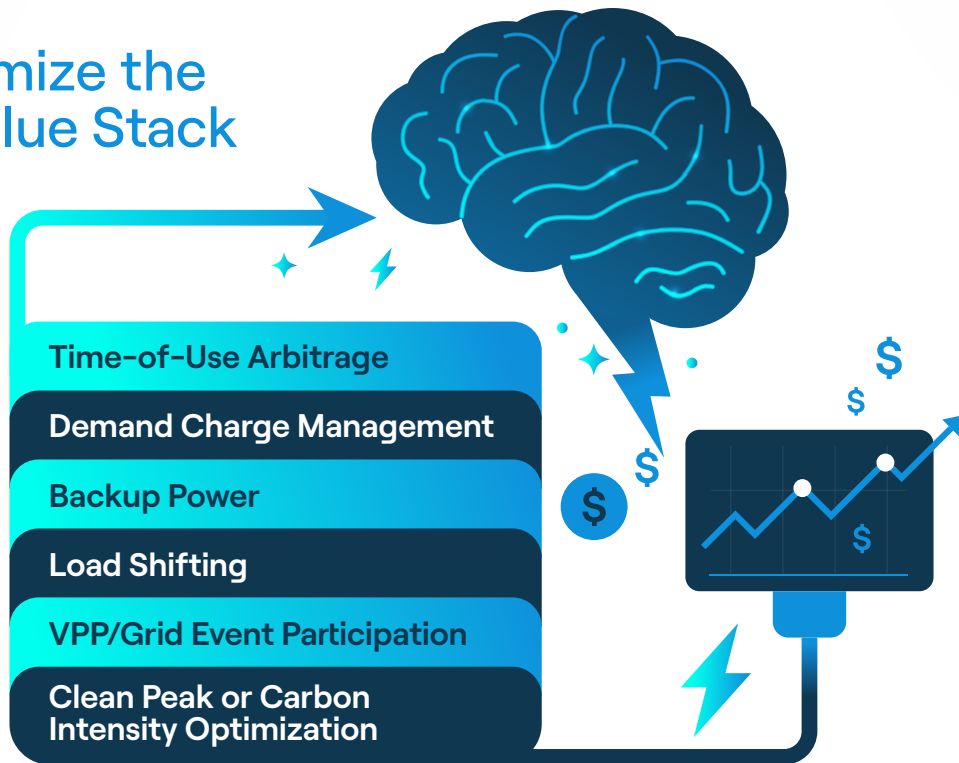

**The Result: Up to 2–4x
more revenue per site
than standard
aggregator connections.**

What You Get

- Annual recurring revenue per BESS
- EMS-grade optimization no development required
- Site control via plug-and-play gateway
- Full market access & regulatory support
- Legal-ready Power Management Agreement (PMA)
- Custom incentive-sharing structures for your value chain
- Your brand, your product our backend

We Optimize the Entire Value Stack

Optimizing Every Electron – Like a DER Air Traffic Controller

Let's Make Your Systems Earn

We're partnering with a select group of OEMs and system integrators to embed DividendVPP as a white-label revenue layer—keeping your systems competitive, your partners aligned, and your customers earning from the grid.
