

Aqua superPower Installs Marine Fast Charger at Marina Genova, Advancing Electrification Along the Ligurian Coast

News Release

Genoa, Italy – September 19th, 2025 – The Port of Genoa, a historic hub of movement, commerce, and culture in northern Italy, takes a significant step toward sustainable maritime innovation with the installation of a powerful DC 75 kW Aqua superPower marine fast charger at Marina Genova. This milestone supports the electrification of boating in the area and strengthens the marina’s commitment to integrating tradition with environmentally conscious practices.

Nestled within Genoa’s vibrant maritime and urban landscape, Marina Genova has evolved into an ecosystem prioritising sustainability. The new charging station, developed in collaboration with Aqua superPower, marks a pivotal addition to the growing network of electric vessel charging infrastructure along the corridor from the French Riviera to Liguria.

This installation complements the recent deployment of two charging stations at neighbouring Marina di Loano—one DC 75 kW and one AC 22 kW—further expanding the region’s electric boating capabilities. With this advanced infrastructure, electric vessels can now navigate fully electrified routes from Saint-Tropez to Genoa, making it the longest electrified coastal waterway in the world. The initiative underscores the region’s dedication to reducing maritime emissions and preserving the pristine natural beauty of the Natural Parks in the area, such as the UNESCO World Heritage Site Cinque Terre National Park and Portofino.

The strategic location of Marina Genova, next to Genoa’s airport, opens exciting new possibilities for electric boating, enabling seamless and sustainable exploration of the entire port area. Electric boat users can now easily navigate the Genoa’s historic port and beyond, fostering eco-friendly day trips or extended journeys along the Ligurian coast. The new Aqua 75 DC marine fast charge station has been switched on to coincide with the Genoa Boat Show, running from the 18th until the 23rd September.

“This collaboration with Aqua superPower is a game-changer for sustainable boating in Liguria,” said Giuseppe Salamanca, Chief of Operations at Marina Genova. “The new charging station not only supports cleaner navigation but also positions Genoa as a leader in the global transition to electric maritime transport.”

“The installation of Aqua superPower’s fast charger at Marina Genova is a pivotal step in electrifying Liguria’s coastline,” said Dario Sirtori, Deployment Manager Italy for Aqua superPower. “This project not only enhances sustainable boating in the Cinque Terre National Park and Portofino but also strengthens the region’s role as a pioneer in eco-friendly maritime innovation.”

Aqua superPower’s technology ensures fast, reliable, and user-friendly charging, enabling boaters to explore the beautiful Ligurian coastline with minimal environmental impact. This project aligns with broader efforts to foster innovation while honoring the region’s rich maritime

heritage. For more information about Aqua superPower's marine charging solutions, visit www.aqua-superpower.com.

About Aqua superPower

Aqua superPower is the first fully marinized dockside global network of fast charging stations for electric vessels. Powered by its proprietary cloud-based platform, Aqua ensures reliable network operation and maintenance and is backed by expert service teams and 24/7 customer care to deliver a seamless electric marine charging solution to operators and customers.

The product range includes AC and DC charging solutions, allowing DC compatible powerboats and jet skis to rapidly recharge and extend their autonomy. Aqua superPower has developed the first supercharger specifically engineered and rated for use in marine environments, built to IP65 standards and enabling marinas, ports and harbours, commercial operators, boat builders, and powertrain manufacturers to accelerate the transition to clean propulsion in the marine sector.

As a leader in electric marine mobility, Aqua superPower works with marinas, harbours, commercial operators, boat builders, and powertrain manufacturers to accelerate the transition to clean propulsion in the marine sector. Aqua provides the software tools, expertise, and infrastructure to help the marine sector overcome the challenges of electrification, transforming those challenges into opportunities for sustainable, future-proof revenue.

Aqua superPower sets the standard for innovation, reliability, and performance in the future of marine electrification. For more information, visit www.aqua-superpower.com.

About Marina Genova

Marina Genova is one of the most modern large yachting complexes in the Mediterranean and one of the few capable of accommodating **superyachts up to 130 meters** in length. It offers **high-level services** tailored to all needs, with special attention to crew leisure time.

Located just minutes from **Genoa's city center**, Marina Genova provides **unparalleled logistics** for large and ultra-large yachts, specialized expertise (the most extensive refit and repair shipyard services), and a **strategic location** at the heart of the luxury triangle **Portofino – Porto Cervo – Saint-Tropez**.

Marina Genova offers:

- **400 berths**, including **100 for super and mega yachts up to 130 meters**
- The **largest fuel docks in the Mediterranean** (100m and 150m)
- A **shipyard area** for routine and extraordinary maintenance
- **Maritime agencies** and numerous services dedicated to large yachts

- **Restaurants, hotels, and commercial activities** catering to owners, guests, and crew
