WOMEN'S PRODUCT SUMMARY

STRENGTH & BEAUTY: REDEFINED

CAPTURING THE SPIRIT: OUR MOMENT, HER POWER

FUELING THE MOVEMENT: GEAR TO INSPIRE HER ASCENT

REFINED COLOR: THE SOPHISTICATED EDGE OF SPORT UTILITY

FABRIC INNOVATION: UNRIVALED PERFORMANCE, EXCLUSIVELY ENGINEERED

TurboDry

INNOVATION MEETS RESPONSIBILITY

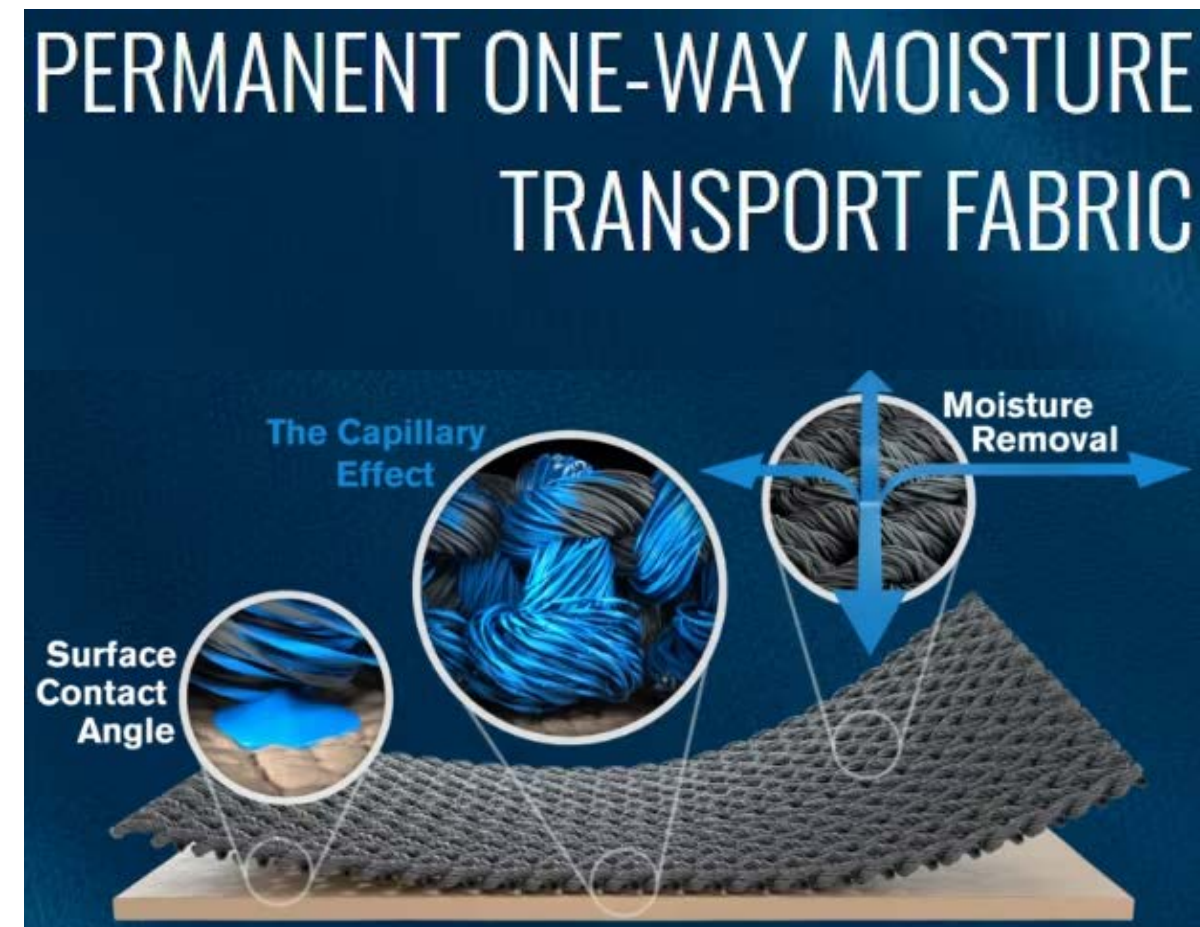

TurboDry's revolutionary fabric is focused on sustainability and environmental responsibility. Choosing TurboDry® means choosing a sustainable future, where cutting-edge technology meets eco-consciousness, allowing you to enjoy high-performance apparel.

NATURE-INSPIRED INNOVATION

TurboDry® is not just a fabric; it's a testament to the power of biomimicry. Inspired by the ingenious ways in which plants efficiently transport water from their roots to their leaves, our technology mimics nature's brilliance. This natural, physics-based approach enables moisture to move unidirectionally, away from the skin, replicating the efficiency found in the organic world. By harnessing the principles of biomimicry, we have created a fabric that doesn't compromise on performance while staying true to our commitment to the planet.

PROPRIETARY CAPILLARY TECHNOLOGY

At the heart of TurboDry's sustainability is our proprietary capillary technology, intricately knit into the fabric structure. These capillaries act as nature-inspired conduits, continuously pulling sweat away from your body. By designing our fabric with these unique features, we've created a self-sustaining system that promotes efficient moisture movement without relying on environmentally harmful additives. TurboDry® is engineered to excel in performance while maintaining harmony with nature.

DURABLE PERFORMANCE

Unlike many traditional moisture-wicking materials, TurboDry® relies on the inherent properties of its fabric structure rather than wicking chemistry. We observe the performance increasing over the life of the fabric, ensure durability and comfort that does not come at the expense of the planet. Our commitment to this approach reflects our dedication to sustainability and the well-being of both our users and the Earth.

EARTH-FRIENDLY MANUFACTURING

Our responsibility extends beyond the product itself to the entire lifecycle, including manufacturing. TurboDry® is produced with a commitment to reducing environmental impact. From eco-conscious sourcing of materials to energy-efficient production processes, we strive to make choices that prioritize the health of our planet. We are constantly exploring ways to enhance our manufacturing practices, ensuring that TurboDry® not only performs exceptionally but also aligns with the principles of sustainability.

World's leading brand of recycled polyester fiber and resin.

REPREVE's brand partners recognize that creating a sustainable future must begin now. That's why together we've diverted more than 42 billion plastic bottles from the waste stream. These leading brands are using REPREVE fiber to make high-quality products from trusted recycled content. From surfwear to outdoor gear to car interiors, we're helping tomorrow by making yesterday count.

drirelease custom blends

The unique *drirelease* technology blend of synthetic and natural fibers accelerates the water release rate of the fabrics pushing water and perspiration to the outside of the garment into the air, faster than other performance fabrics available on the market, without chemicals. What makes your fabric performance be permanent and eco-friendly.

DR technology is available in a wide range of classic and fashion-forward blends. Comfortable classic cotton, Merino wool that never feels damp against the skin, easy-care natural linen, soft and smooth Lyocell, E.C.O. (Environmentally Correct Origins) with BCI, organic or recovered cotton and/or recycled polyester, and customizable blends that meet your specific needs developed in the *DR* Comfort Lab.
