Introduction

The Reason for BABYMAMA

BABYMAMA is an ERC-20 token that will reward holders of BABYMAMA with ETH directly into their wallet. The more BABYMAMA you hold the more ETH dividend payments you get.

The reason the BABYMAMA team created this token is because there are a lot of rugpulls/pump and dump baby tokens that are being created everyday. Our goal is to be the mother of all those baby tokens by looking after our sweet sweet babies (you).

This dividend payment that you receive from holding BABYMAMA we are calling an “allowance” and if you never received an allowance from your mom... then you have a lot of catching up to do and we are here to help.

Tokenomics

We will be discussing the most frequent questions asked about tokenomics with a little extra love.

Each transaction with MAMA is charged with a 5% tax. A transaction consists of buying/selling and sending your tokens from one address to another.

Uniswap trades - 5%

Wallet to wallet - 5%

Rewards Tax - 5%

The allowance (dividend/ETH rewards) distributed to holders come from 5% of each transaction. These rewards are pooled and then sent out as volume comes into the token, the more volume the more rewards.

Liquidity Tax - 5%

A 5% liquidity tax is applied to increase the value stored in MAMAs liquidity pool. The more liquidity the more stable the price will be!

BURN!

1 hour after launch when there is a chance to buy the token there will be more than 45% burn of all tokens. We do this to ensure that everybody who wants to buy can buy within the first hour without there being an issue with whales buying up the tokens.

Token Allocation

Public Sale 35%

Presale - 12.3%

Marketing - 5%

Burn - 47.7%

There will be a total of 1 billion tokens with the above allocation.

Presale - Presale consists of only the first 10-15 people to send ETH to [0x113804Db9031dd3d4843E71CF552512329439054](https://www.etherbase.io/etherscan/address/0x113804Db9031dd3d4843E71CF552512329439054)

Presale will receive their tokens before the launch.

The marketing wallet is there to collect dividends in ETH to pay for the growth and development of BABYMAMA - no tokens will sell as we will want to continue collecting rewards.

Partners will be paid from the marketing wallet.

Rewards

The more BABYMAMA you hold the more rewards you get. There is no minimum you have to own in order to receive rewards.

Rewards will be sent out as volume comes in. The more volume the more allowance you get. This is to encourage buyers to buy and hold while also trying to get other people to buy in to help create volume and more liquidity to receive rewards.
