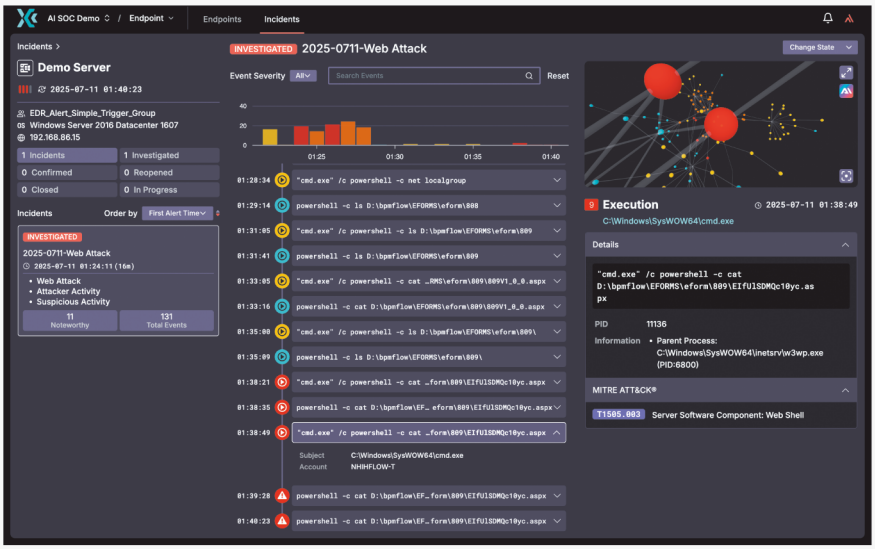
Faster, Easier Endpoint Security - Even with Lean IT and Security Teams.

AI can assist human experts to implement incident detection, analysis, and management.

XCOCKPIT ENDPOINT



What CyCraft AI Does in XCockpit Endpoint

Monitor activities 24/7 and alert the SOC team when high-risk events are detected.

Correlate a large number of security alerts without manual intervention, visualize the incident correlation and attack paths, and quickly conduct the root-cause analysis.

Manage everything from ticket creation to closure, allowing enterprise IT administrators to focus on handling pending tickets with automated workflow.

Why You Need XCockpit Endpoint

EDR/MDR

With the XCockpit Endpoint annual license, enterprises can continuously monitor and detect breaches in real-time, receiving alert reports promptly.

COMPROMISE ASSESSMENT

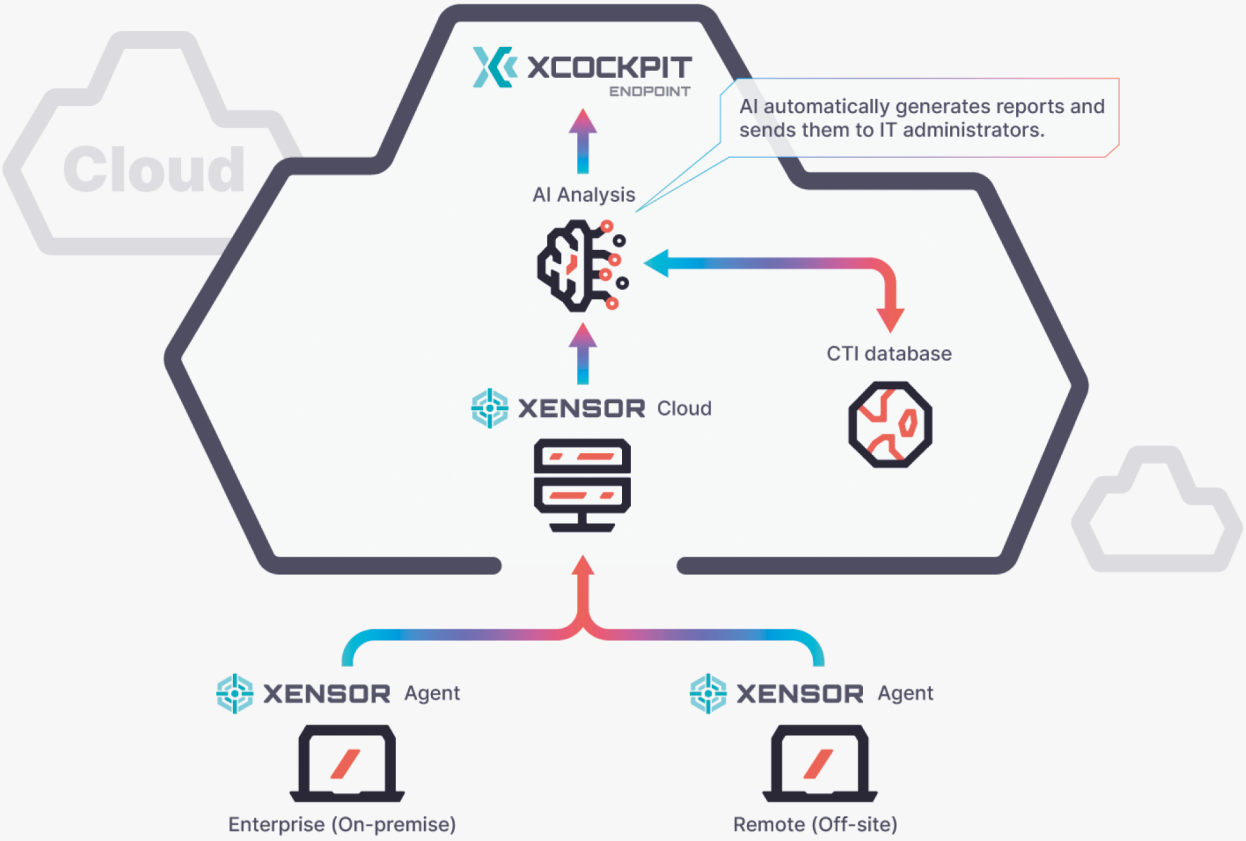
Our one-time service, with a 30-day license, performs a comprehensive endpoint health check-up and identifies any hidden breaches.

INCIDENT RESPONSE / FAST FORENSIC SERVICE

Our one-time service enables rapid investigation of the overall security posture and automatically provides remediation plans for affected devices/accounts.

XCOCKPIT ENDPOINT

Operations can be Managed without Human Experts. AI-generated Autonomous Cybersecurity Management



Install the agent, data analysis and incident management are entirely conducted on CyCraft's cloud, with no additional assets required than a browser.

AI-generated analysis reports prioritize high-priority issues first, ensuring efficient operations.

CyCraftGPT

CyCraft's next-gen Cyber AI cybersecurity language model, equipped with professional cybersecurity knowledge as well as case analysis and interpretation capabilities, can assist you in various cybersecurity tasks and improve your team's operational efficiency.
