

A Powerful DCT Platform that Delivers Stronger Evidence

ObvioGo's flexible technology has been designed to capture, integrate, and analyze more accurate multi-source data, empowering clinical science teams to generate stronger therapeutic evidence with ease.

Current platforms don't deliver on the full potential of DCTs. So we built ObvioGo.

By combining best-in-class digital instruments, AI, and machine learning with intuitive interfaces and seamless integrations, the ObvioGo DCT platform and mobile app leverage interoperability for more robust and reliable outcomes—delivering on the full potential of your DCT.

Interoperability Meets Accuracy

Modular Components

Speed study startup and make mid-study changes fast and easy.

Patient-Centric App

Facilitate seamless engagement for more complete and accurate data.

Purpose-Built Technology

Smooth data integration and workflows into a single, unified platform.

5 Seamless Modules. 1 Powerful Solution.

Designed with real people—sponsors, study teams, sites, and patients—in mind to remove friction, improve accuracy, and support the humans who make trials successful.

Study Design

Configurable design tools enable preview, testing, and iteration, allowing sponsors to optimize studies in real time and pivot with peace of mind.

Mobile Application

Study tasks are incorporated into participants' daily lives, with built-in notifications and gamified nudges that keep patients motivated and compliant.

Data Management

Centralized tools and integration with existing clinical systems enable study teams to advance more quickly to analytical review.

Study Management

Built-for-purpose technology streamlines workflows and facilitates real-human interactions that increase patient engagement.

Outcomes Capture and Assessment

Traditional eCOA methods are paired with AI-assisted digital instruments, wearables, and remote patient monitoring devices to improve data accuracy.

 ObvioHealth

Harness the full potential of your DCT.
