Environmental Statement

Sheen Group | All 28 Victorian stores | Effective 1 October 2026

Our commitment

Sheen Group is committed to repairing vehicles in a way that protects the environment and the communities around our 28 Victorian stores.

Caring for the environment is a company-wide objective, shared by every store, team, employee and contractor.

We aim to prevent pollution, use fewer resources, and keep improving how we work, while meeting or going beyond every environmental law that applies to us.

What we focus on

Area	What we do
Repair over replace	Repair parts where safe and approved by manufacturer standards, so fewer new parts are made, and fewer old ones are thrown away
Clean air	Spray in filtered booths, maintain filters on schedule, and utilise to low-solvent and waterborne paints where possible
Clean water and land	Keep chemicals and fluids in bunded storage, use spill kits, and never let wash water or fluids reach stormwater drains
Hazardous materials	Buy, store, label and dispose of paints, solvents, refrigerants and batteries safely, using licensed contractors only
Energy and emissions	Use efficient booth, compressor and lighting equipment, switch off when idle, and look for renewable energy options
Water use	Fix leaks quickly and use water-saving equipment for washing and cleaning
Waste and recycling	Separate, reduce and recycle waste as set out in our Recycling Policy
Suppliers and partners	Choose suppliers and recyclers who share our standards and can prove where materials end up
Our people	Train every team member to understand their environmental role and speak up about problems

How this links to our Recycling Policy

This statement sets out what we stand for; the **Sheen Group Recycling Policy** sets out exactly how each store handles its waste. The two documents are read together, and any change to one is checked against the other.

Compliance, accountability and review

We meet our general environmental duty under Victoria's *Environment Protection Act 2017* by identifying environmental risks at each store and reducing them as far as reasonably practical. Environmental performance and any incidents are reported to the executive team.
