Australian Owned Company

SDO-5

• Advanced Safety

Superlift utilises the latest in automatic safety technology. SDO-5 will detect an obstruction, stop and reverse the door. Enhance the safety of your home with our optional Photo Electric Beams; perfect for children and pets.

• Easy Installation

Our pre-packed assembly kit includes twist on brackets to mount to any location. Our easy to use hangers allow you to retro fit SDO-5 to existing brackets from a previous installation.

• Simple Setup

SDO-5 is completely electronic and can be setup in minutes. Limit and force settings ensure your garage door is constantly safe and secure. Our easy to follow installation guide means advanced features are easily programmed.

• Dual Speed

Everyone enjoys a little more time. SDO-5 is speedy and smooth to get you home faster. For older tilt doors the speed can be reduced to help prevent wear and tear.

• Belt Drive

Our steel reinforced belt is quiet but without compromising strength.

• More Power

The standard SDO-5 is a very powerful 1000N, capable of operating most garage doors with ease. For the larger and heavier doors on the market we also provide a robust 1200N model to ensure the job is done right.

• The Right Fit

SDO-5 comes with three standard rail lengths (3.3m, 3.6m, 3.9m) to fit any garage door up to 3 metres in height. Extension kits are also available for those unique openings. Our rails can also be cut down easily for J-Type tilt door installations.

• Advanced Features

SDO-5 is packed with modern features you should expect from a garage door opener. Bluetooth connectivity to your smart phone, auto-close and a pre-set service warning are just some of those available. Ask us today about what else is included in our latest model.
