

The Last Mile of Defense in Cyber Recovery

When ransomware strikes, recovery shouldn't be a gamble.

EchoLeaf SafeRoom™ is a patented, physically air-gapped storage solution that protects your data from tampering, encryption, deletion, and destruction. It gets you back in business in hours, not weeks.

Whether you're safeguarding critical records, protecting intellectual property, or maintaining operational continuity, EchoLeaf ensures your most important data stays intact, isolated, protected, and instantly recoverable.

Recovery in Hours, Not Weeks

Full systems restored fast with roll-back orchestration and patented bare-metal rebuilds.

No Ransom. No Downtime.

Your data is physically isolated, inspected for malware, and written to immutable media (LTO) for maximum resilience.

Patented, Proven Architecture

Offline recovery, media orchestration, and malware screening. Uniquely built and protected under U.S. patent.

Flexible, Non-Disruptive Deployment

Works alongside your existing backup and security stack. No rip-and-replace required.

Built to Scale and Sustain

Up to 11PB per system. 87% lower energy usage than disk or cloud. No egress fees, and no vendor lock-in.

Validated. Trusted. Ready.

- IBM-certified and available through their global sales channels
- Virtualization aggregates all removable media into a unified, orchestrated recovery system
- LTO-based immutability with one-way geographic redundancy
- 24x7 system monitoring and alerts

**You can't always prevent the breach.
But you can own the recovery.**
