The Webjet split payment use case.

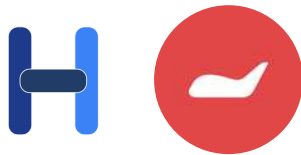

The screenshot shows a payment selection screen with three radio button options:

- Afterpay**: Includes the Afterpay logo. A tooltip points to this option with the text: "Afterpay can be used for payments up to \$4,000 per transaction. For higher value bookings, select **Split your Payment** above to pay across multiple transactions."
- PayID**: Includes the text "No payment fee" and the "Pay by Bank" option with a bank icon.
- Pay In 4**: Includes the text "No payment fee" and the "PayPal Pay in 4" button.

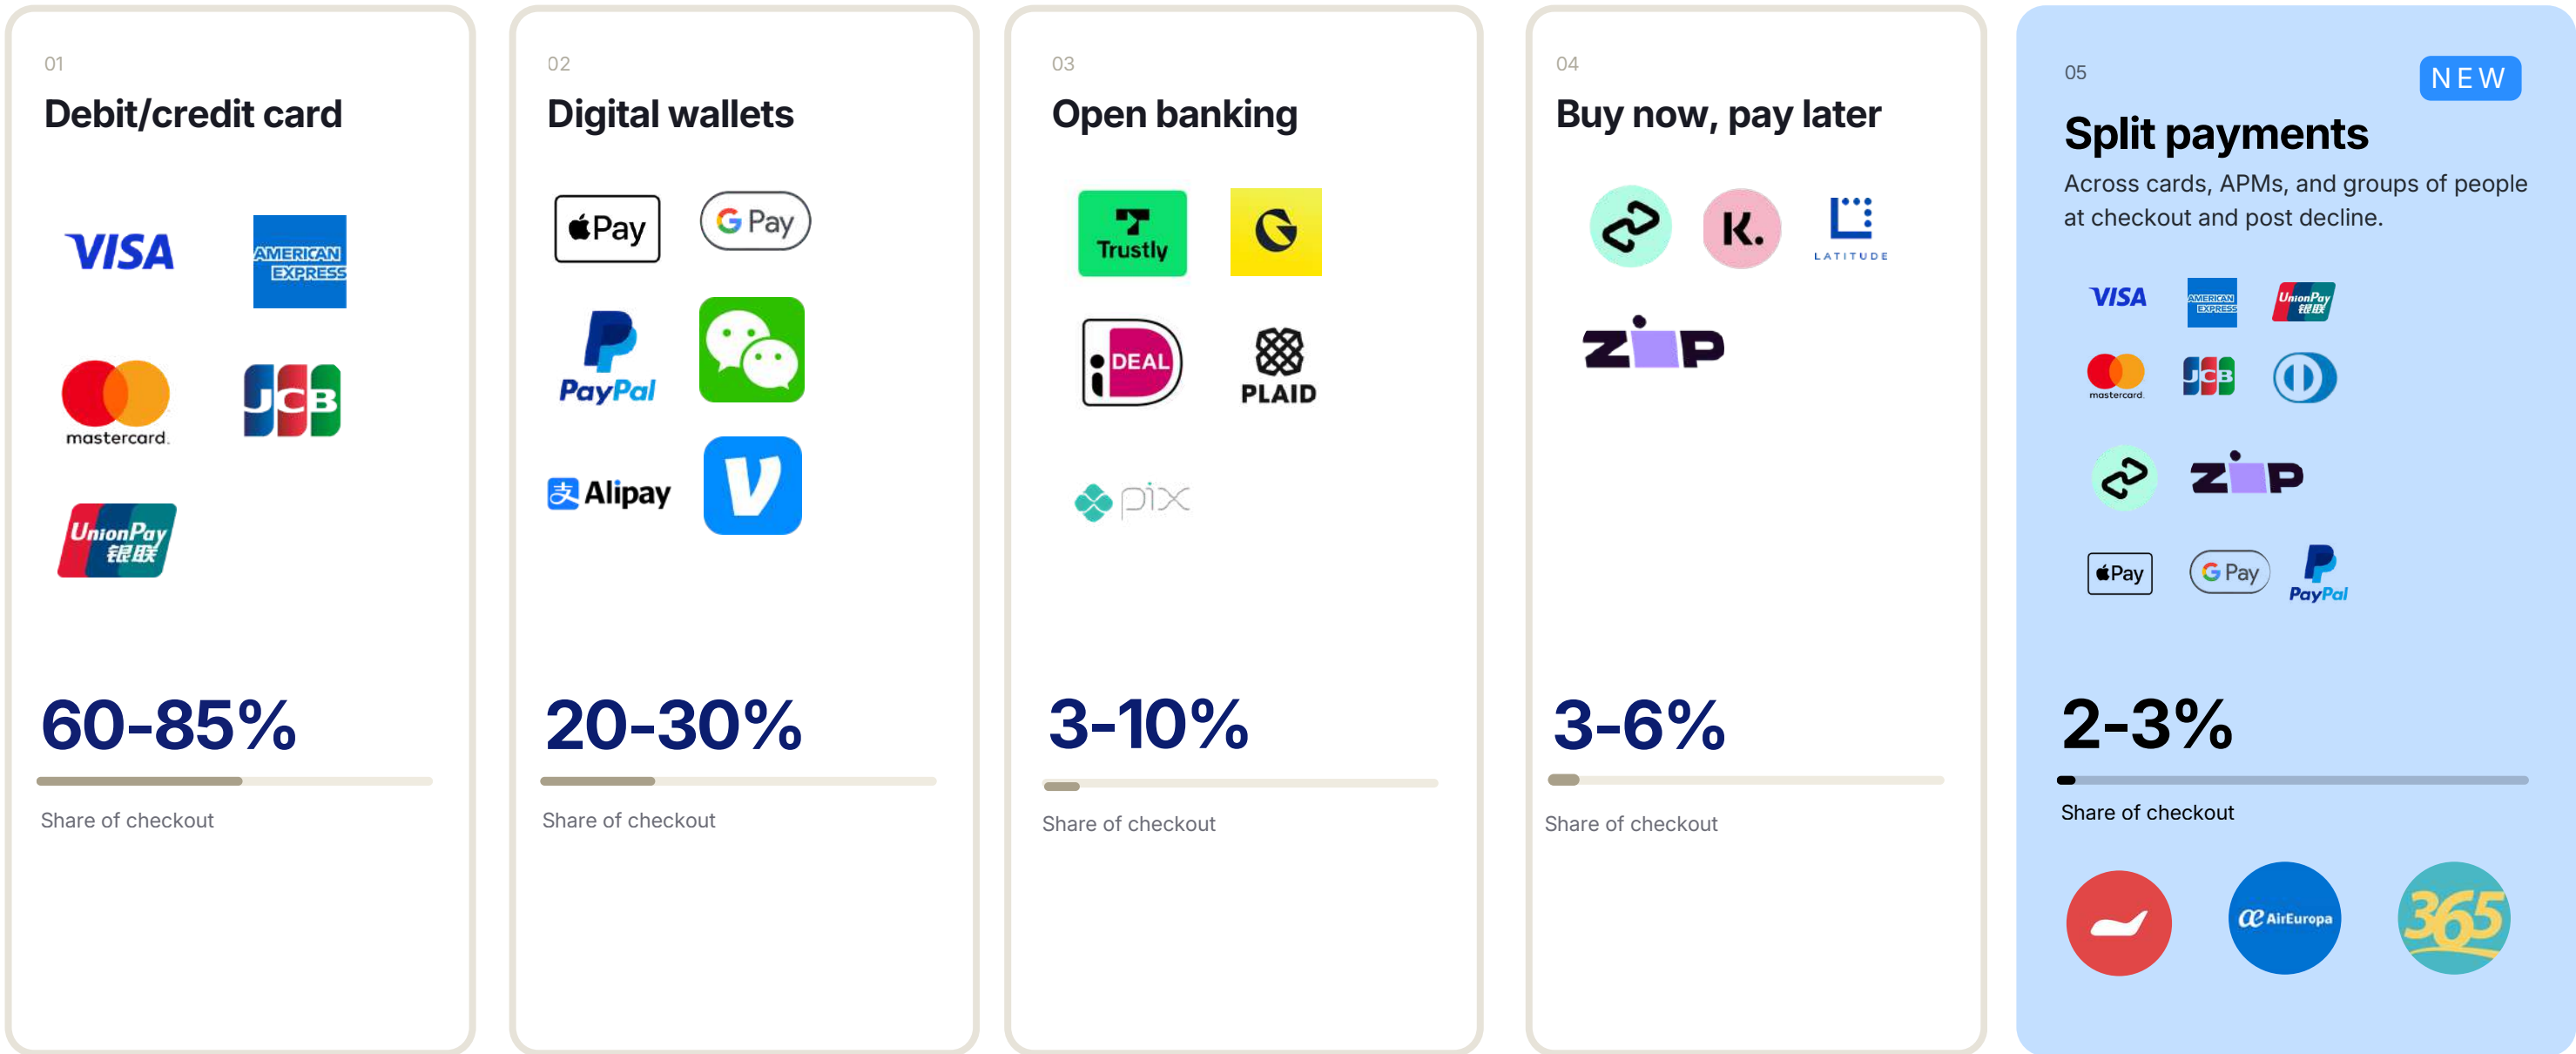

- Declines due to insufficient funds **resulted in a tens of millions of transactions lost.**
- **Conversion on high-basket-value purchases was low.**
- **Buy Now, Pay Later and cards cap a traveller's spend** — e.g., Afterpay's limit is \$4K AUD.

How the product is being used

TRANSACTION DATA SINCE Q3 LAUNCH 2026

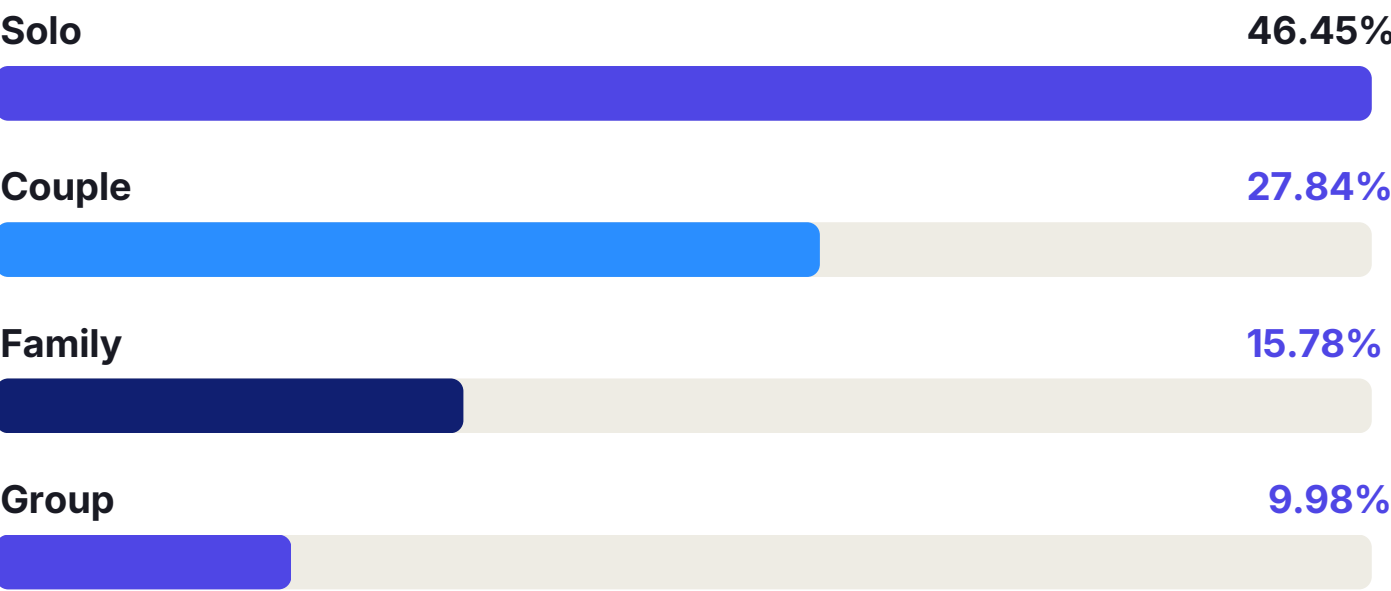

Source: Hands In & Webjet

50% of bookings are paid with **card + a buy now, pay later**

Pax group type

Share of split bookings

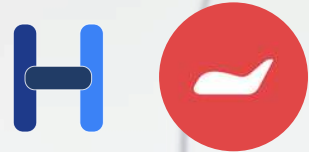

53.6% travel with someone else — couples, families and groups, exactly where the bill gets shared.

Geography

Share of split bookings

Add Transtasman and **57.6% cross borders** — this isn't a domestic-only behaviour.

Flight focus, but driving additional spend.

>95%

Flight bookings

Split payments are being used predominantly for flight bookings.

<22%

Flight + Extras

Split payments are being used alongside flight bookings to add insurance, car rental, and hotels, materially increasing attachment compared with other payment types.

Hands in

80%

Travellers prefer split payment options — less than 25% of travel retailers offer them.

#2

Payment priority airlines want to adopt today (22%).

>40%

Declines in travel are due to insufficient funds.

What's next in this partnership?

1

LIVE TODAY

Cards + Afterpay

Split payments launched at Webjet checkout across cards and Afterpay.

afterpay

2

NEXT

PayPal Pay in 4

Adding the next major APM into the split.

3

THEN

Other payment types

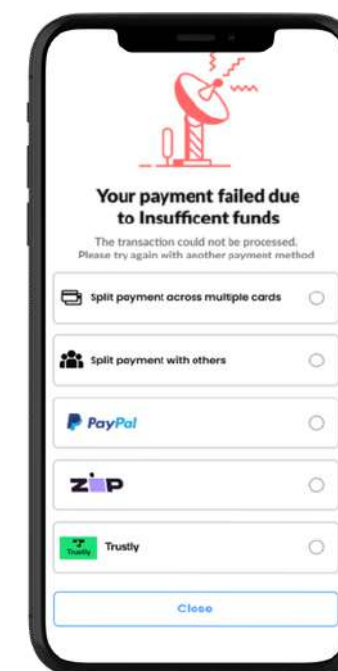

Broader BNPL choice for travellers or other payment methods.

4

NEW PRODUCT

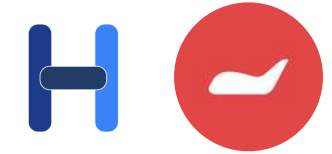

Decline Recovery

When a payment fails on insufficient funds, a pop-up offers split payments to recover the sale — on every purchase below the BNPL threshold.

FAQ

Source: Hands In & Webjet

A payment fails or times out?

We void the rest of the transaction and release the hold on remaining pre-authorised funds.

How are split payments reconciled?

A unique reference (HIM_<Ref>_<Seq>) links each authorisation to the booking in your reporting.

How do refunds work?

Refunds are returned to the original payment methods used at the time of booking.

Depending on; booking type, supplier processing times and refund amount the refunds may be returned in multiple transactions.

Which APMs do you support?

Hands In can support;

Any card type.
Buy now, pay later.
Wallet payments.
Open banking (only on the last transaction)

Are you the merchant of record?

Hands In does not act as the merchant of record for a split payment transaction. Hands In allows the merchant or the acquirer to consume the payment, and this will show up as individual transactions rather than being applied as one payment.

How do split payments work with fraud & chargebacks?

Your fraud rules can stop a split at a set threshold; chargebacks stay with your acquirer and we supply the data.
