serious about **it

four core divisions working together to provide our customers with the most efficient, quality wet waste management solutions;

- **tankering** – 12 depots from perth in Scotland to halstead in kent with a tramper fleet for emergency cover.
- **service and maintenance** – mobile services engineers and technicians, expert in private sewage and waste-water systems.
- **installations and projects** – the design, supply and installation of new private sewage treatment and pumped systems, as well as major upgrades and the overhaul of existing systems.
- **grease management services** – design, supply and installation of grease management systems, complemented by planned and reactive maintenance from our mobile FOG engineers and tankers .

locations

in addition, we have a tanker tramper fleet that can go anywhere at short notice.
our network of mobile engineers enable us to cover our nationwide client base.

serious** about tankering

- the backbone of serious** and where it all began in the 1990's.
- with our fleet of modern vacuum tankers, we have you covered.
- serious** provide professional sewage, grease and wastewater tankering services.
- our goal is to keep you operational and compliant.
- serious** offer quick and efficient tankering solutions to meet your needs; be it sewage, grease, wastewater, non-hazardous maritime wet waste.
- From our smallest 9,000litre to our largest 30,000litre vacuum tankers we can shift **it.

domestic tankering

planned and reactive tankering services –

- sewage treatment plant desludges
- septic tank empties
- cesspool empties
- pumping stations

annual maintenance contracts so you don't have to think about **it.

domestic tankering is where it all began, a few hundred domestic customers within 20 miles of burton-on-Trent.

our domestic customers now cover the greater midlands area, east wales, the north west, cumbria and scotland.

commercial tankering

offering planned and reactive tankering services 24/7 to the hospitality industry, inc. pubs, restaurants and hotels etc. as well as all types of commercial clients be they offices, showrooms, retail, schools etc.

- sewage treatment plants
- septic tanks
- cesspools
- sewage pumping stations
- surface water pumping stations
- passive grease traps
- flooding

nationwide coverage to contract clients.

planned is always best, which is why we work on milk rounds of planned tankering work but in an emergency we will be there for you.

we always like to give our customers a fixed price with a simple schedule for additional time and volumes removed.

industrial tankering

planned and reactive tankering services 24/7;

- sewage treatment plants
- septic tanks
- cesspools
- sewage pumping stations
- surface water pumping stations
- passive grease traps
- flooding
- non-hazardous process liquid waste
- non-ABP liquid waste

serious offer nationwide professional tankering services to meet your needs, providing efficient waste removal and disposal solutions for industrial customers across the country.

water company's –

we provide 24/7 tier 2 and tier 3 tanker cover to support the water company's during times of storm and when met with network issues.

maritime tankering

planned and reactive tanker services 24/7;

- sewage
- grease
- non-hazardous wet waste

few people think about where the wastewater goes when they are on their luxury cruise or even on a ferry across the channel or out to the islands.

serious** specialist maritime tankering offer both the planned and emergency tankering of wet waste from ships, predominantly sewage and non-hazardous waste, utilising both our depot based tankers and tramper's.

serious** work closely with a number of specialist waste disposal facilities and brokers, if your not sure give us a call with the EWC code and a description of the waste and we'll see how we can help.

serious** about maintenance

proper preventative maintenance is critical to ensure the correct operation of private sewage and wastewater systems, it extends system longevity and helps to maintain legal compliance.

serious** offer a highly experienced network of mobile engineers and technicians who undertake proper planned preventative maintenance and repairs of your –

- sewage treatment plants
- sewage pumping stations
- stormwater pumping stations
- wastewater related electro-mechanical equipment
- holding tanks / remote alarm systems

along with our tanker fleet we offer total maintenance packages to –

- commercial customers
- the hospitality industry
- industrial customers
- domestic clients

we operate fully integrated digital works systems which track our teams, automatically upload records of the works undertaken and produce compliant reports.

we are available 24/7 to undertake emergency works with reduced rates to contract clients.

serious** about solutions

serious specialise in the design, supply and installation of private sewage treatment plants, sewage and stormwater pumping stations, holding tanks, interceptors and large passive grease traps for –**

- large domestic (multiple residence) systems
- hospitality clients, including pubs, restaurants, hotels etc.
- non-hospitality commercial clients; offices, showrooms, retails, schools etc.
- industrial clients; factories, processing plants

serious** provide tailored solutions to meet your needs for the next 25 years plus and can undertake all aspects of the works –

- planning permission
- environmental permitting and liaison
- full design and project management
- equipment supply
- installation and commissioning
- full design and build package

serious** will guide and support you through the whole journey.

in addition to new systems we undertake major refurbishments, overhauls and enhancements to existing systems.

installations and projects is led by our technical director who has over four decades experience of designing and installing systems.

grease services

whether you operate a restaurant, industrial kitchen, or food processing facility, we offer tailored grease management solutions to meet your specific needs.

serious deal with **it**

grease trap servicing & maintenance

serious** about grease

effective grease management is a key component of any catering kitchen or food manufacturing establishments operations, be it a small passive trap, an automatic grease recovery unit (GRU) or a larger external multi-stage passive trap, serious have a solution for you –**

- our serious** team of experienced mobile grease technicians undertake comprehensive grease trap cleaning and maintenance solutions for all small internal passive grease traps and automatic grease recovery units (GRU's).
- our dedicated grease tankering fleet undertake the routine emptying and cleaning of larger passive grease traps, both internal and external.

our services are designed to keep your system running at its best and ensure your compliance.

serious** service all grease management systems the fats, oils and greases (FOG) that serious** collect are bulked up and taken either to AD plants for conversion into biogas for power generation or for refinement and processing into bio-diesel.

serious** are at the forefront of the FOG collection and recycling industry and work in partnership with several water company's, power generators and the bio-diesel industry.

grease management solutions

serious** provide FOG solutions

serious do not treat all sites the same, the grease solution for one site or client may not be suited to the next.**

our team of grease experts visit a site to undertake a FOG audit and tailor a solution to achieve compliance, what works for a small rural tea room won't be fit for a large pub or hotel who may do a peak of 600 covers a day.

serious** don't just sell you a box, we sell you a total package including ongoing maintenance and support.

serious** solutions –

- automatic grease recovery units - systems designed to mechanically remove the FOG at source, the unit being located under the main potwash / spray sink, they can also be designed to take flows from commercial dishwashers.

after considering the market and the systems available, serious** became main UK agents for Thermaco the manufacturer of the Big Dipper Unit, the original and the best. simple to maintain and recover high quality oils for recycling, only requiring very simple daily maintenance.
- small internal passive traps, suitable for very small flows and loads, located to capture grease at the head of a drainage system, often with a food collection basket requiring daily cleaning.

- external passive traps, when sized correctly need no site staff maintenance –
 - in addition to the Big Dipper GRU we also import the Thermaco Trapzilla unit, much smaller than traditional passive traps and designed to collect a higher % volume of FOG to water. super-efficient and with the smaller footprint they can achieve compliance even in the smallest of sites, they can be installed above and below ground and are ideal for site basements.
 - three stage large underground passive traps, designed to EN1825 offer total protection and are ideal for rural sites with sewage treatment systems.

whatever your need serious** have the solution.

grease trap tankering

we empty **it

serious grease trap tankering services ensure that your system is thoroughly emptied and cleaned, if the trap is adequately sized this will ensure compliance, minimise odours and reduce drainage issues.**

over time grease traps accumulate large volumes of fats, oils and grease (FOG), along with food debris, requiring regular emptying, left unmaintained this leads to blockages, foul odours and costly remedial works. if proven to be the source of FOG, sites and owners face prosecution and large clean up bills from the water companies.

passive grease traps vary in size; the smallest we deal with is only 25 litres and can be emptied by our mobile grease technicians, the largest FSE grease trap we empty monthly is 11,000 litres, the largest food processing plant grease trap that we empty requires 3 of our tankers.

for grease traps over 100 litres it is not practical to be emptied by our grease technicians, over 100 litres we utilise our dedicated grease tanker fleet.

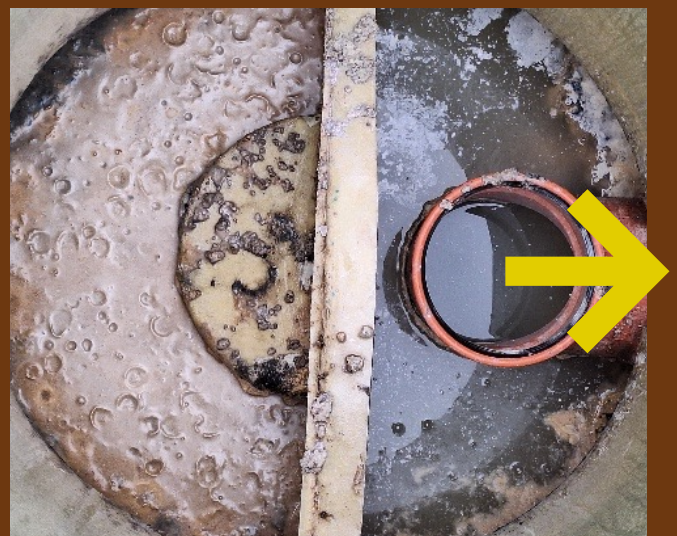

passive grease traps are designed to BS EN1825 which specifies monthly emptying, as do many of the water company's, the vast majority of the grease traps we encounter are grossly undersized for the sites trade levels and are emptied far too infrequently.

the serious** approach for larger passive traps is to take the actual site trade figures and utilise BS EN1825 to determine a frequency, some traps requiring monthly empties during the peak periods and reducing to suit during low trade periods.

to minimise costs we empty grease traps on a 'milk round' basis, emergency grease trap empties are extremely expensive, the tankered FOG we collect is taken for recycling into biofuels or biogas to generate power.

grease in

clean water out

grease sectors

(01)

hospitality grease management

from pubs, restaurants and hotels to catering facilities and event venues, effective grease management is critical to maintaining a clean, efficient and compliant kitchen environment.

(02)

commercial grease management

our expert team provides reliable commercial grease trap installation, maintainance, and cleaning services that ensure your operations run smoothly, efficiently and in compliance with environmental and water regulations.

(03)

industrial grease management

whether you run a manufacturing plant, food processing facility, or any other large-scale operation, our tailored grease management solutions ensure your systems run smoothly and comply with all environmental and water regulations.

serious** about being serious

about serious**

with decades of experience serious specialise in sewage, grease and wastewater management, offering expert services including tankering, maintenance, and system installations.

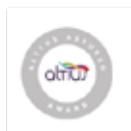

our team ensures that every job is handled to the highest standard, helping to keep you compliant and your systems running smoothly.

serious** mission

from the design and installation of sewage and grease systems to desludging and ongoing maintenance, we are experts in all aspects of waste water management.

available 24/7, with depots nationwide, we're always ready to assist.
