

One team of AI agents.

Every project on your desk.

Orchestra deploys a coordinated team of specialist AI agents that investigates, analyses and executes complex travel & expense projects from start to finish.

WORK MODEL

You direct, the team executes

OUTPUT

Formatted, editable, cited reports:
PPTX • DOCX • PDF

CADENCE

On demand, or scheduled to any cadence

How every project runs: *five gates, human in charge*

1 • DEFINE

You set the goal. Orchestra asks a few scoping questions.

2 • PLAN

The Project Manager proposes a numbered plan you edit and approve.

3 • EXECUTE

Specialists work in parallel across your data and market intelligence.

4 • VALIDATE

Surprising findings pause for your review; a validation agent audits everything.

5 • DELIVER

A cited, editable report. Then schedule it to re-run on fresh data.

Five projects, one workflow

Carrier Contract Renewal

\$1.8M identified

The negotiation pack a consultancy builds in six weeks: savings waterfall, route-level rate comparisons, volume-commitment gaps, all cited to your data.

Hotel RFP & Rate Integrity

2-4% leakage visible

RFP responses scored against your criteria; every booked stay audited against the contracted rate.

Policy Optimisation

3-7% leakage diagnosed

Ranked policy leaks, modelled savings per change, and the traveller-friction impact of each fix.

Budget Performance

2-4 days/month saved

Period-accurate variance by cost centre, decomposed into volume, price and mix. Validated and scheduled monthly.

Quarterly Programme Review

1-2 weeks/quarter saved

The full bench rebuilds your QBR deck every quarter, unprompted. You review, edit and release.

The team behind the chair

Project Manager: Plans, delegates, coordinates, keeps you in charge

Domain specialists: Fare, rate-parity, contract, policy and FP&A analysts, each bound to curated data

Market Intelligence: External benchmarks and web research, every snippet cited

Validation Agent: Checks consistency, anomalies and data quality before anything reaches you

Report Writer & Export: Stakeholder-ready output with native editable charts

"You can't hire this team. It's built for you: the capacity of a team of 20, not 2."

Why it's different

⚡ Minutes

Not the weeks or months the same work takes human teams and consultancies

📋 Your plan

You see and edit the plan before it runs. The bit no chatbot does

✅ Validated

A dedicated validation agent audits every output before delivery

📊 Native PPTX

Editable chart objects you can adjust in the room, not screenshots
