Cutting-edge preventive health

For over twenty years, Preventicum has combined exceptional service with cutting-edge medical technology and clinical expertise to develop world class health assessments for our discerning clients.

Our expert team focuses on early detection and prevention of many health concerns including cancers, heart disease and stroke.

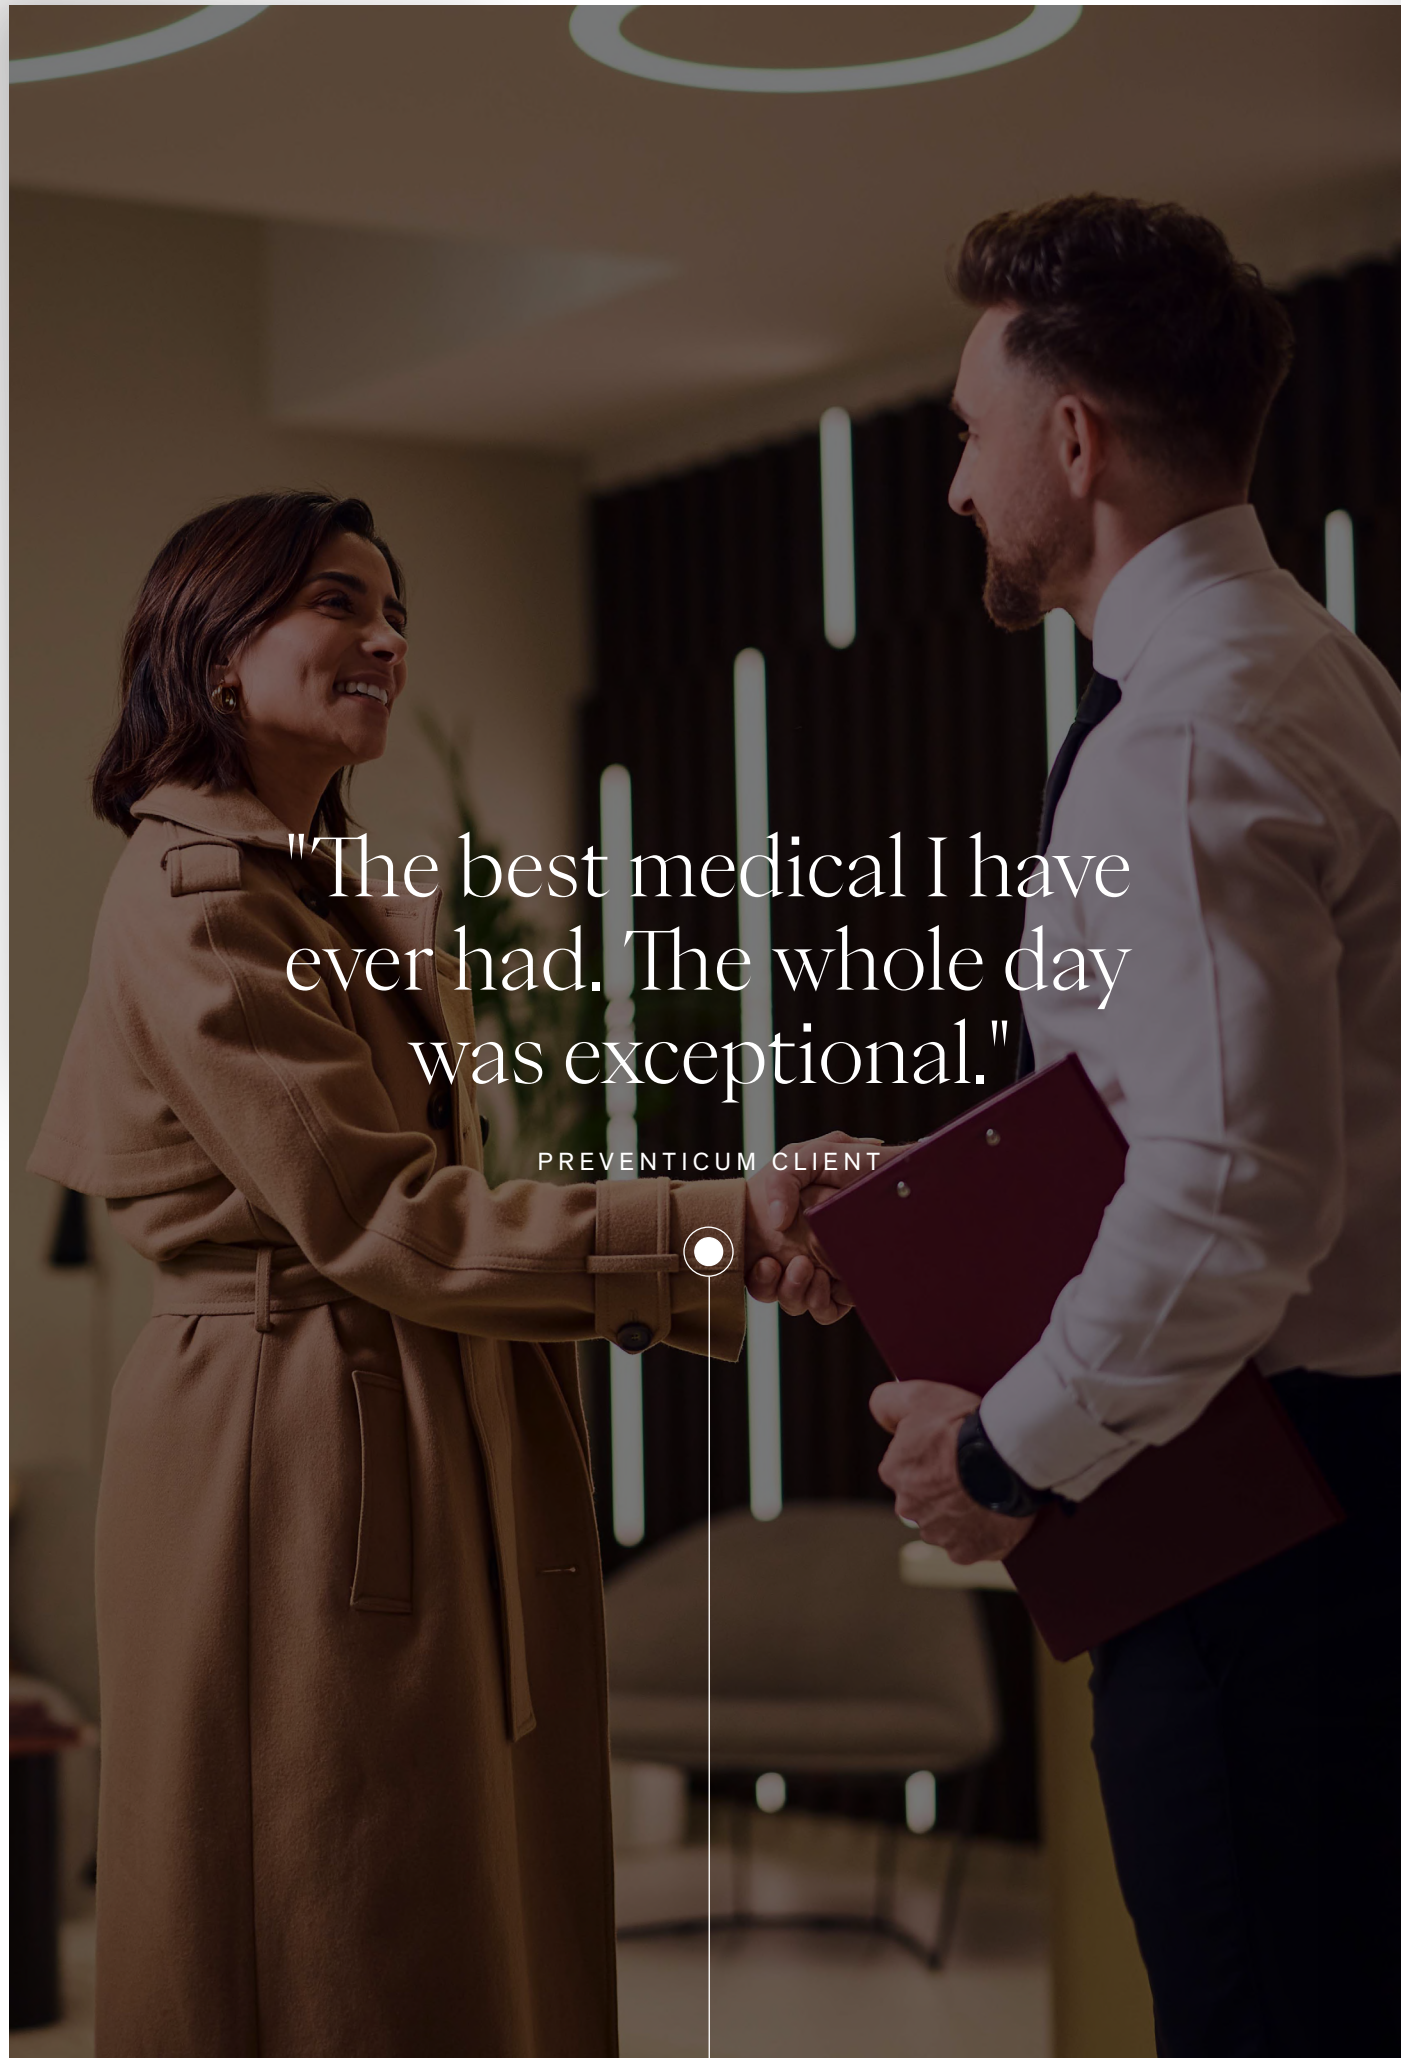

Your assessment will take place on one day, under one roof at our luxury London clinic with results available before you leave, giving you reassurance and clarity.

Experience the pinnacle of preventive health with our Optimal and Ultimate Assessments, setting new standards with our pioneering approach and offering the ultimate peace of mind.

DR YING-YOUNG HUI

THE DETAILS

UP TO 8 HOURS

Consultation and examination

Spend up to an hour with your Preventicum Doctor discussing your health, history, and concerns. A full physical examination is included, with prostate or gynaecological screening if clinically indicated.

Blood and urine analysis

Over 50 blood tests assess organ function, cardiovascular risk, hormones and nutrition. Urine analysis checks key health markers.

PLAC, ApoA, ApoB and Lp(a) blood tests

These specialist tests provide deeper insights into cardiovascular risk, guiding early prevention or treatment. Lp-PLA2 measures artery inflammation, ApoA reflects protective 'good' cholesterol, ApoB indicates harmful cholesterol particles and Lp(a) identifies inherited heart risk.

MRI scans

Relax in our state-of-the-art MRI scanners with audio-visual streaming while our team of Senior Radiographers scan your brain, heart, liver, abdomen and pelvis.

BrainKey*

MRI scans of the brain with analysis of over 25 regions to calculate brain age. A 3D dashboard reveals brain health with personalised lifestyle, exercise and nutrition advice.

Oxygenation-Sensitive Cardiac MRI*

In partnership with Area 19, we offer the world's first OS-CMR in preventive health. This three-minute, AI-driven scan assesses coronary vascular function without stress or medication.

Musculoskeletal MRI*

Your choice of joint or bone scan such as knee, shoulder or hip. Our 3T MRI provides gold-standard imaging for detecting ligament, tendon, cartilage and subtle bone injuries.

Biparametric prostate MRI**

Our biparametric MRI, combined with a consultation, PSA blood test and ultrasound, is reviewed by a Consultant Urologist and AI enhancement to provide a clear assessment of prostate health.

Ultrasound examinations

Our dedicated Sonographers will scan your thyroid, carotids, aorta, liver, gallbladder, pancreas, kidneys, spleen, uterus and ovaries or prostate and testes.

Bone health

Bindex® ultrasound uses advanced ultrasound technology to assess bone quality and fracture risk in women over 40.

Mole check

Our Consultant Dermatologist will perform a full body mole examination using a dermatoscope to identify skin cancers such as melanomas, squamous cell carcinomas and basal cell carcinomas with immediate feedback and advice.

Clinical review

Our nursing team will measure your height, weight, BMI, resting heart rate and blood pressure.

Body composition

Our advanced InBody970 provides an extensive map of your muscle, fat and water distribution.

Grip strength

Hand grip strength provides a measure of muscle health, helping assess overall strength, longevity and risk of sarcopenia.

Lung function

Spirometry measures breathing capacity and helps detect lung disease.

Cardiac tests

A resting electrocardiogram and exercise stress echocardiogram assess heart structure and function. Performed on a treadmill or bike, your heart's response to exertion is closely monitored, helping detect coronary disease, rhythm abnormalities and assess overall cardiovascular fitness.

VO₂max

Using advanced seismocardiography and AI to analyse your heart's mechanical vibrations, we use a Seismofit® Sensor to deliver a precise VO₂max estimate in under three minutes.

Audiometry

The sensitivity of your hearing will be measured across a range of frequencies.

Radiologist consultation

Explore your MRI scans, including a video of your beating heart, with your Consultant Radiologist.

Immersive holographic experience*

Your brain scans are transformed into a 3D Augmented Reality visual, viewed with your Consultant Radiologist in an interactive, immersive consultation.

Results consultation

Your Preventicum Doctor explains your findings, next steps and referrals if indicated.

Comprehensive report

A detailed report includes your results, images and a personalised lifestyle plan.

*Exclusively with your Optimal Assessment | **Exclusively with your Optimal* Assessment

Exclusively with your Optimal Assessment

Oxygenation-Sensitive Cardiac MRI

We are proud to partner with Area19 to offer Oxygenation-Sensitive Cardiac MRI (OS-CMR). This world first in preventive health assessments offers a stress and medication free way of testing coronary vascular function in just three minutes, using AI-informed analysis.

BrainKey

This pioneering approach to brain longevity analyses your MRI scans, measuring over 25 regions to calculate your brain age. A 3D dashboard built by neuroscientists shows a clear picture of your brain health, with personal recommendations for nutrition, exercise and lifestyle changes.

Musculoskeletal MRI

A musculoskeletal (MSK) scan of your choice, such as your knee, shoulder or hip. Our 3T MRI scanner provides exceptional imaging of joints and long bones. MRI is the gold standard for detecting meniscal, ligament and tendon tears as well as subtle bone injuries.

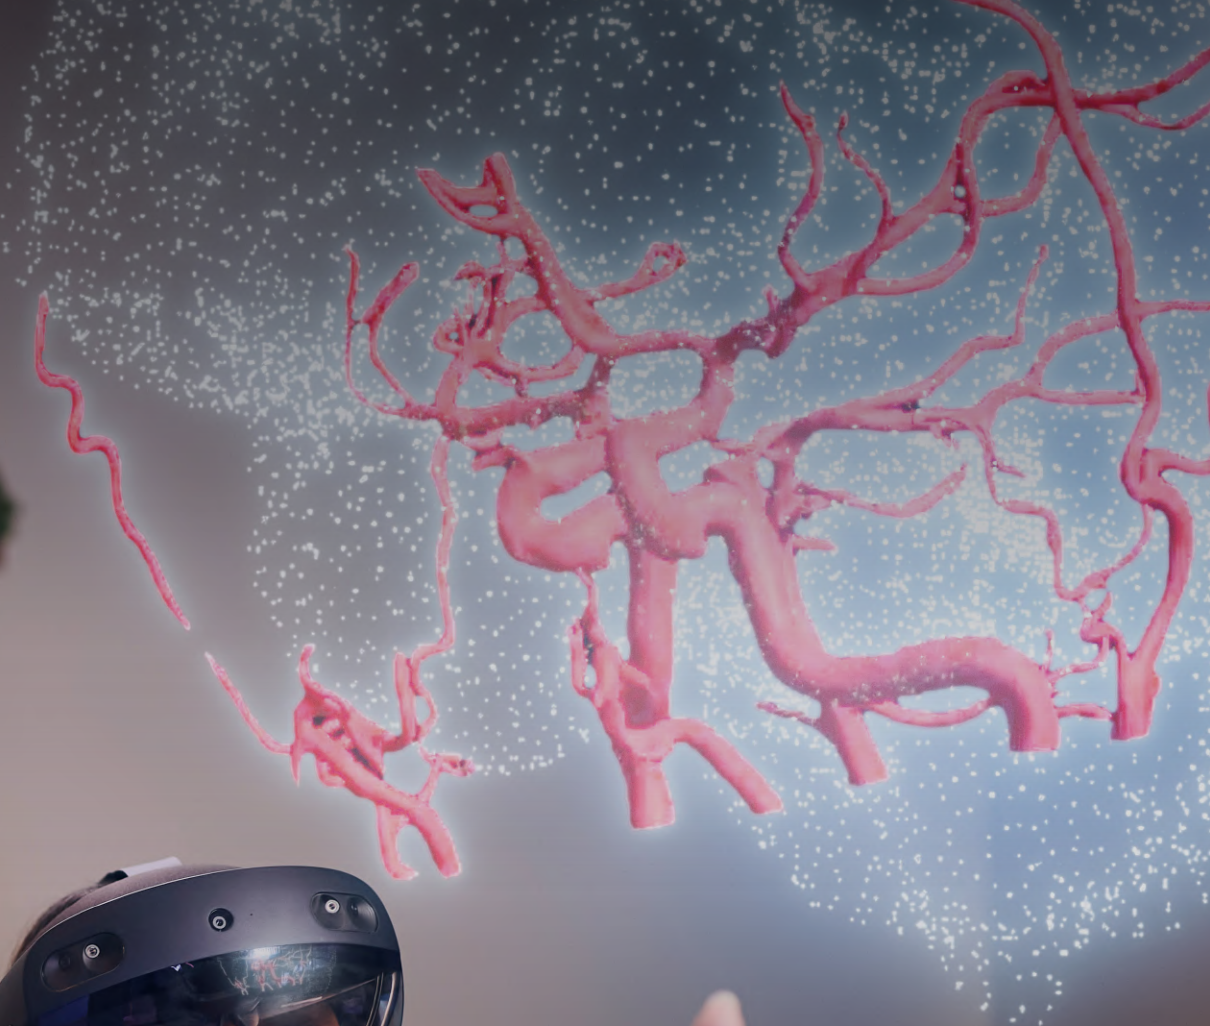

Lp-PLA2, ApoA, ApoB, and Lp(a) blood tests

These specialist tests provide deeper insights into cardiovascular risk, guiding early prevention or treatment. Lp-PLA2 measures artery inflammation, ApoA reflects protective 'good' cholesterol, ApoB indicates harmful cholesterol particles and Lp(a) identifies inherited heart risk.

Unique immersive holographic experience

In partnership with Medical iSight, your brain scans will be converted into a 3D Augmented Reality visual. During your consultation with our Consultant Radiologist, you will view and interact with your brain in an unparalleled, immersive experience.

Exclusively with your Ultimate Assessment

Your prostate health

Our biparametric MRI scan provides detailed, high-definition images of your prostate. These will be reviewed and reported by a specialist Consultant Uroradiologist and enhanced with AI reporting technology.

This MRI scan, combined with a detailed consultation, PSA blood test and ultrasound scans, enables your Preventicum Doctor to give you a clear assessment of your prostate health.

OUR PLUS ASSESSMENTS

Optimal⁺

For male clients, this includes a detailed prostate health evaluation with a biparametric MRI scan

£12,500

Ultimate⁺

For male clients, this includes a detailed prostate health evaluation with a biparametric MRI scan

£9,500

Our Optimal⁺ and Ultimate⁺ Assessments are for men over 45 or those with a family history of prostate cancer.

World class MRI technology

- ☼ Two state-of-the-art Philips MRI scanners
- ☼ AI enhanced imaging, reviewed and reported by Consultant Radiologists
- ☼ Expert team of Senior Radiographers
- ☼ Radiation-free imaging
- ☼ An integrated audio-visual experience with on-demand media streaming service
- ☼ Continuous voice contact with our team
- ☼ Extra-wide scanners for your comfort
- ☼ Detailed scans of your brain, heart, liver, abdomen and pelvis
- ☼ Biparametric MRI scan of the prostate with our Optimal⁺ and Ultimate⁺

"The overall experience was excellent and I was highly impressed. Preventicum took things to a completely new level for me. Your team is first class."
