

THE SOLIVUS ARC[®]

The Solivus Arc is a ground-mounted solar sculpture that can provide super **clean power for the home**.

Its distinctive shape has been designed to **capture maximum light from the sun throughout the day**, allowing it to generate a lot of power in a small space (footprint is approx 2x2m²).

The Arc's 16 **solar panels are made from organic material**, meaning that no rare earth materials are used during production, making it the cleanest power plant in any garden.

It is easy to install, can help power the home, EV or swimming pool, and can be re-located should it ever need to move home.

The Solivus Arc is currently at beta testing phase.

You can **register interest on our website** to be the first to know when they are ready to order.
