

INVESTMENT OBJECTIVE

The investment strategy of the Fund shall be guided by a focus on businesses demonstrating the potential to scale.

The Fund shall prioritize those investments which have a proven track record of generating consistent cash flows, valuing stability over sporadic gains.

The strategy lies in the systematic investment plan model, which reflects a deliberate and measured approach. The model embodies the ethos of “slow and steady wins the race,” drawing parallels to the methodical pace of a tortoise. This will help ensure that there is a resilient and sustained growth trajectory, aligning with the Fund’s commitment to both financial prudence and long-term wealth creation.

FUND CHARACTERISTICS

Manager: Taksh Asset Management Private Limited

Legal Structure: Category III Open-ended AIF

First Close Date: 6th August 2024

Benchmark: Nifty 500 TRI

Management Fees: Up to 2.50%

REFLECTIONS ON THE MARKET

The equity market, much like life, tests conviction in periods of volatility. **Enduring success** does not come from predicting every turn but from staying rooted in patience, discipline, and perspective.

India’s recent **GST refinements embody structural change**—deepening formalisation, boosting efficiency, and strengthening the foundations of growth. This is more than a policy tweak; it is a quiet shift that reshapes the economic fabric for decades to come.

Globally, headlines oscillate between tariffs and war of words, unsettling sentiment. Yet beneath this noise, **money remains the moat of markets**—capital flows provide stability and direction. Here too, India continues to command attention, as liquidity aligns with reform momentum and long-term opportunity.

This is a time to be constructive, not cautious. Volatility offers entry points, reforms provide resilience, and discipline turns uncertainty into advantage. Just as wisdom steadies the individual, it steadies the investor.

The markets, in the end, reward not just analysis but perspective—the ability to see beyond turbulence and trust the enduring arc of progress.

REFLECTIONS ON INVESTING: LESSONS FROM K.N. SIVASUBRAMANIAN

We recently marked Taksh’s first anniversary with a webinar featuring **K.N. Sivasubramanian**, one of India’s most respected CIOs and fund managers. The discussion blended timeless lessons from his two decades of investing with perspectives on today’s evolving economic and market landscape.

Mr. Sivasubramanian reflected on how investing has changed over the last 25 years—from an era of attractive valuations and limited research to today’s highly competitive and information-rich environment. He emphasized the importance of **disciplined research, maintaining liquidity, and using volatility as an opportunity rather than a distraction**. Drawing from experience, he cautioned against overconfidence, recalling how proximity to Eicher Motor led him to misjudge its potential—highlighting why investors must remain humble and open to external perspectives.

He also advised investors to **tune out media noise** during downturns and focus on fundamentals. While business quality drives returns, he stressed that management integrity and capability are equally critical in shaping long-term outcomes.

Turning to the economy, he noted that short-term disruptions—whether from tariffs, geopolitics, or GST transitions—are inevitable, but India’s **long-term growth trajectory remains intact**, albeit at a steadier, more sustainable pace as the base grows.

On technology, he flagged the impact of **AI and machine learning** on Indian IT jobs, with routine coding roles likely to be displaced. He suggested that widespread reskilling will be essential, as industries adapt to new realities.

At the global level, he highlighted the **shift in innovation** from the U.S. to China, especially in EVs, AI, and biotech. While China’s demographic challenges may cap its long-term momentum, U.S. innovation could also slow due to immigration barriers and funding cuts.

On India’s domestic challenges, he underscored the need for dynamic state **leadership and simpler compliance processes** to drive entrepreneurship and job creation.

He also cautioned that India's demographic dividend may not automatically translate into economic strength unless education and labor market realities evolve in tandem.

Finally, on markets, he addressed the challenge of investing amid high valuations and relentless SIP flows. While larger funds may increasingly mirror market returns, he believes smaller, focused managers have the opportunity to differentiate through research, conviction, and agility.

PORTFOLIO STRATEGY: GROWTH WITH RESILIENCE

At Taksh as we have consistently highlighted, our portfolio remains aligned with India's domestic consumption-driven growth story. Post the Union Budget, we increased our allocation to the B2C (Business-to-Consumer) segment, which now accounts for ~60% of the portfolio. The recent GST reforms further reinforce the policy momentum toward consumption, building on earlier measures such as income tax reductions and lower interest rates.

- ✓ **Near-term:** Lower taxes on essentials and small-ticket discretionary items can support demand resilience.
- ✓ **Medium-term:** Formalisation, simplification, and affordability are likely to drive sustainable consumption growth.
- ✓ **Portfolio impact:** Our B2C exposure in retail, discretionary, NBFCs (as a proxy to discretionary), and healthcare stands to benefit, aligning well with the structural direction of GST 2.0.

Overall, we see strong tailwinds in the revival of domestic consumption and remain focused on participating in this structural opportunity.

Our portfolio is positioned for long-term capital appreciation, underpinned by strong earnings growth, sectoral diversification, and attractive valuations. By FY27, we are targeting a 23% RoE and an earnings CAGR of 26% over FY25–27E - reflecting confidence in the durability of India's consumption-led growth story.

We thank you for your trust and look forward to navigating the road ahead with conviction, prudence, and purpose.

FUND DYNAMICS
