

Datafi Unified Cyber App

With Datafi, security teams fuse signals from scattered cyber data sources into a single Cyber App where they can ask natural-language questions and trigger Agents to take action, so every tool in the stack works together instead of in silos.

The result: a unified, governed, AI-capable security app that maximizes the value of your existing security investments.

The Problem

Security leadership updates are created from cyber data silos & dashboards manually.

Teams lack a trusted, auditable framework for AI on security data.

Another dashboard won't move the needle on its own.

Not just another dashboard... a unified app that tells the whole cyber story.

We **enable the tools you already own** and turn signals into actions. You **see value fast** while protecting what matters most, your data.

Role Specific Dashboard

Execs, Operations, and GRC get a **tailored view** curated from the cyber sources they need to drive value.

Ask in Plain Language, Let AI Work Responsibly

Datafi delivers governed semantic context, enabling **GPT-like, plain-English** answers on your cyber dashboard.

Agents that help automate telling the whole cyber story

From scattered data to one story: Agents compile findings, map impact, and surface tradeoffs with traceable proof.

Why Datafi

Applied AI that is Secure:

Unlock the power of enterprise data securely and confidently knowing only the right people may access the right information at the right time.

Business-Aligned & Enterprise Ready Approach:

We deliver value to large enterprises in highly regulated environments.

Fast, Measurable Impact:

We focus on accelerating outcomes while reducing complexity and friction.
