# whip around + PLATFORM SCIENCE

Streamline fleet inspections and maintenance with Whip Around

Managing a safe, compliant, and efficient fleet & assets should not be a guessing game. Whip Around provides the digital tools you need to take control of inspections, maintenance, and compliance in one easy-to-use platform.

About Us

Whip Around is a fleet maintenance and inspection platform built to help fleets stay compliant, reduce downtime, and improve efficiency. Since 2016, we've helped thousands of businesses replace paper-based processes with a mobile, digital solution focused on safety, visibility, and control.

Problem Statement

Many fleet operators still rely on outdated, paper-based systems to manage inspections and maintenance. These processes are time-consuming, prone to error, and difficult to scale. Without real-time visibility, issues often go unaddressed, leading to compliance risks, increased downtime, and costly repairs. Fleet teams need a smarter, more efficient way to track vehicle health and manage repairs without being buried in paperwork or disconnected systems.

Custom Digital Inspection Forms

Access a library of pre-built forms or create your own to match the exact needs of your fleet. Templates are fully customizable to ensure inspections are consistent and complete. All submissions are digital, removing the risk of lost or damaged reports.

Photo Capture for Better Documentation

Drivers can use their mobile devices to upload photos during inspections, providing visual proof of issues or completed checks. This boosts accountability and speeds up maintenance decision-making.

Preventative Maintenance Scheduling

Set automated service intervals based on mileage, engine hours, or time. Whip Around tracks it all and alerts you when service is due—helping prevent breakdowns and extend asset life.

AI Inspections

Inspection Pro uses AI to automatically review inspection photos, flagging mismatches and missed defects that operators might overlook. It helps teams catch issues earlier, improve inspection quality, and reduce the time spent manually reviewing images.

Work Orders and Service History

When a defect is reported, create and assign work orders in just a few clicks. Track progress, add outstanding faults, and store mechanic sign-offs. All activity is logged and linked to each asset for full visibility and reporting.

Single Sign-On (SSO) for Seamless Access

Simplify login and access management with Single Sign-On. With SSO enabled, team members can securely access Whip Around using existing company credentials—no extra passwords required.

> Before we were using Whip Around we had no system to keep track of all of this and it caused us a lot of problems. We used to have to input all the data manually. Now with Whip Around, it does save us a lot of time."
